
Horizontal-to-Vertical Lift

Vertical-to-Horizontal Lift

The examples at left illustrate how the length, weight, and opening direction of your object as well as the mounting position of the springs can affect which gas springs are right for your application. Find an example that is similar to your application and use it as a guide to select your springs. The specifications are based on using two gas springs (one on each side of the object), a 90° opening, and the center of gravity at the middle of the object. *Note:* The recommended force rating is per spring.

For Object Length	For Object Weight	Recommended Gas Spring			Recommended Mounting Position			
		Force Rating	Extend. Length	Comp. Length	(W)	(X)	(Y)	(Z)

Gas Springs

Our most popular gas springs are perfect for handling a variety of open-assist applications. Use them with your choice of fittings (unless noted), mounting studs, and mounting brackets (sold separately; see pages 1203 and 1204)—just be sure to match the rod and end thread sizes. Temperature range is –22° to +176° F, unless noted. **To Order:** Please specify force from those available below. If you don't see the exact force you need, just round up to the closest available force.

Steel— All have a steel cylinder and piston rod. The seal is rubber. ***Type 316 Stainless Steel—*** The choice for corrosion resistance. All have a Type 316 stainless steel cylinder and piston rod. The seal is fluoroelastomer, unless noted.

Gas-Spring End Fittings and Brackets

Need to mount your gas spring? We offer an array of fittings, mounting studs, and mounting brackets to meet your requirements. You can use the same or two different style fittings on each end of your gas spring. Be sure to match the rod and end thread size of your gas spring to the thread size of the fittings. The fittings will increase your gas spring's extended and compressed lengths, so add the (A) value for each fitting you attach.

Ball-Socket Fittings

Standard Nylon

Standard Steel and Stainless Steel

Quick-Release Nylon

Quick-Release Steel

The most versatile gas-spring fittings, these ball-socket fittings rotate in any direction to compensate for misalignment. They require a ball stud or ball bracket (sold separately below) to mount your gas spring. The ball sockets easily snap right onto the stud/bracket ball—just make sure the sockets and studs/brackets have the same ball size. All sockets have safety clips for secure attachment to studs/brackets except for ***quick-release sockets***, which do not require clips (nylon socket has a snap-on cover to securely hold the ball; steel socket is spring loaded).

Fits Ball Size	Material	(A)	(B)	(C)		
Standard Sockets for M6 Threaded Gas Springs						
10 mm	Glass-Filled Nylon	0.75″	0.37″	0.66″	9416K86	$1.28

Mounting Ball Studs and Ball Brackets

Mount your gas spring in almost any position: snap its ball socket (sold separately above) onto the ball of one of these studs or brackets.

Ball Studs—Mount directly into any panel, lid, or door.

Ball Brackets—Fasteners for attaching brackets are not included. ***Steel*** and ***stainless steel brackets*** have mounting holes for attaching to a lid, wall, or other surface. Brackets with a 10 mm ball have 0.2″ dia. mounting holes; all others have 0.26″ dia. holes.

Aluminum brackets do not have mounting holes and can be welded or drilled to your customized hole pattern. Ball is zinc-plated steel.

Fitting Assortments

M6 Thread Assortment—Has two steel and two nylon ball sockets with retaining clips, two zinc eyelet fittings, and two steel ball studs.

9416K95 ..... $11.04

M8 Thread Assortment—Has two steel and two nylon ball sockets with retaining clips, two zinc eyelet fittings, and four steel ball studs.

9416K96 ..... $14.72

M10 Thread Assortment—Has two steel ball sockets with retaining clips, two aluminum eyelet fittings, and two steel ball studs.

9416K98 ..... $44.00

M6 Thread Assortment

(Continued on following page)

For information about gas springs, see page 1202.

Gas-Spring End Fittings and Brackets *(Continued from previous page)*

Need to mount your gas spring? We offer an array of fittings, mounting studs, and mounting brackets to meet your requirements. You can use the same or two different style fittings on each end of your gas spring. Be sure to match the rod and end thread size of your gas spring to the thread size of the fittings. The fittings will increase your gas spring's extended and compressed lengths, so add the (A) value for each fitting you attach.

Eyelet Fittings and Mounting Brackets

Pair an eyelet fitting and eyelet mounting bracket (each sold separately below) to mount your gas spring, unless noted. ***Eyelet fittings*** with a 0.39″ eyelet dia. require a bolt or pin (not included) to mount a gas spring. Your bolt or pin must be compatible with the 0.39″ eyelet dia. ***Eyelet mounting brackets*** have 0.24″ dia. mounting holes for attaching to a lid, wall, or other surface. Fasteners for attaching brackets are not included.

Gas Springs with Ball-Joint Fittings

Shown with Removable Fittings Attached

Shown with Fittings Removed

We've coupled our most popular gas springs with the most versatile fittings: ball-joint fittings consisting of a ball socket and ball stud that rotate in any direction to compensate for misalignment. The ball-joint fittings can be easily removed. The ball diameter is 10 mm. All gas springs have a rubber seal. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Steel— The cylinder, piston rod, ball socket, and stud are all made of steel. Temperature range is –30° to +180° F.

Type 316 Stainless Steel— The choice for corrosion resistance. The cylinder and piston rod are Type 316 stainless steel, the ball socket is nylon, and the stud is 300 series stainless steel. Temperature range is –10° to +180° F.

For information about gas springs, see page 1202.

Locking Gas Springs with Ball-Joint Fittings

Shown with Removable Fittings Attached

Reduce damage to equipment—an external sleeve and spring-loaded knob automatically lock these springs in their fully extended position. To release, pull the knob. *Note:* When using two gas springs in a locking application, use one locking spring and one nonlocking spring.

All of these gas springs come with the most versatile fittings: ball-joint fittings consisting of a ball socket and ball stud that rotate 360° to compensate for misalignment. The ball-joint fittings can be easily removed. The ball diameter is 10 mm.

The cylinder, piston rod, ball socket, and stud are steel. The seal is rubber. Temperature range is –30° to +180° F. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Extended-Service Stainless Steel Gas Springs with Ball-Joint Fittings

Shown with Removable Fittings Attached

Built tough, these gas springs last longer and endure more cycles than other gas springs. Corrosion resistance from their all-stainless steel construction adds to their durability. Great for food, pharmaceutical, medical, and marine applications.

All of these gas springs come with the most versatile fittings: ball-joint fittings consisting of a ball socket and ball stud that rotate 360° to compensate for misalignment. The ball-joint fittings can be easily removed. The ball diameter is 8 mm for 9517T2 and 9517T3; 13 mm for all others.

The cylinder and piston rod are Type 316L stainless steel. The ball socket and stud are Type 304 stainless steel. The seal is rubber and contains USDA food-grade oil. Temperature range is –5° to +158° F. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Extreme-Temperature Gas Springs with Ball-Joint Fittings

Shown with Removable Fittings Attached

A special composite seal allows these gas springs to tolerate temperatures from –4° to +392° F. All come with the most versatile fittings: ball-joint fittings consisting of a ball socket and ball stud that rotate 360° to compensate for misalignment. The ball-joint fittings can be easily removed. The ball diameter is 10 mm.

The cylinder, piston rod, ball socket, and stud are all made of steel. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Miniature Gas Springs with Eyelet Fittings

Gas Spring Shown with Removable Rod-End Fitting Attached

Gas Spring Shown with Rod-End Fitting Removed

Their tiny size and low force output make these gas springs the choice for small lids and doors in confined spaces, such as small toolboxes and access panels. All gas springs have a rubber seal and come with an eyelet fitting on each end. The rod-end eyelet fitting is removable and the rod thread size is M4. Temperature range is –5° to +158° F. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Steel Gas Springs— The cylinder and piston rod are steel. Eyelet fittings are aluminum.

Type 316L Stainless Steel Gas Springs— The cylinder, piston rod, and eyelet fittings are Type 316L stainless steel for corrosion resistance.

Mounting Brackets— To mount your gas spring, use a mounting bracket (sold separately below). They have mounting holes for attaching to a lid, wall, or other surface. Fasteners for attaching brackets are not included. *Style 1* includes a retaining ring.

Reducible-Force Gas Springs with Fittings

Not sure what force you need? A bleed-off valve allows you to release gas to permanently reduce the force. All gas springs come charged to their maximum force.

Note: Release gas in very small increments and then test your application. Once gas is released, the force is permanently reduced.

Steel Gas Springs with Ball-Joint Fittings

Nonlocking Shown with Removable Fittings Attached

Locking Shown with Removable Fittings Attached

Just use the included hex key to open the hex socket and bleed off the gas—no disassembly required. All of these gas springs come with the most versatile fittings: ball-joint fittings consisting of a ball socket and ball stud that rotate 360° to compensate for misalignment. The ball-joint fittings can be easily removed.

The cylinder and piston rod are made of steel. The seal is rubber.

Temperature range is –40° to +212° F.

Locking Gas Springs— Reduce damage to equipment—an external sleeve automatically locks these springs in their fully extended position. To release, pull the sleeve. *Note:* When using two gas springs in a locking application, use one locking spring and one nonlocking spring.

Stainless Steel Gas Springs with Eyelet Fittings

Gas Spring Shown with Removable Fittings Attached

Gas Spring Shown with Rod Protector

Style 1 Mounting Bracket

Style 2 Mounting Bracket

The choice for corrosive environments, these gas springs have a Type 316 stainless steel cylinder and piston rod. They also have a rubber seal and come with an eyelet fitting on each end. You can easily remove the eyelet fittings. Temperature range is –40° to +300° F.

All gas springs have a bleed-off valve to release the gas. *Note:* You will have to remove the end fitting to access the bleed-off valve.

Rod Protectors— Slip one of these protectors over the gas-spring rod and under the eyelet fitting to protect the rod from debris and minimize damage to the seal. All are made of Type 316 stainless steel. The ***240-lb. models*** are 1″ dia.; ***500-lb. models*** are 1.25″ dia.

Regulator Kit— Once you release gas from your gas spring, you can't go back. Attaching a kit lets you monitor how much gas you are releasing as you do it. Each kit contains a pressure gauge, manifold, and bronze fittings.

Mounting Brackets— To mount your gas spring, use a mounting bracket. They're made of stainless steel and have mounting holes for attaching to a lid, wall, or other surface. Fasteners for attaching brackets are not included.

Remote-Release Gas Springs with Ball-Joint Fitting

When you team one of these gas springs with a release control (each sold separately) you can lock the gas spring in place and then release it with a push of a button or lever.

Gas Springs— A valve on the rod end interacts with the release control to operate the gas spring. The cylinder end comes with the most versatile fitting: a ball-joint fitting consisting of a ball socket and ball stud that rotate 360° to compensate for misalignment. The ball-joint fitting can be easily removed.

All gas springs have a steel cylinder and piston rod. Seal is rubber. Temperature range is –22° to +176° F. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Release Controls— Have an eyelet connector that threads right onto the threads at the rod end of the gas spring. The eyelet hole diameter is 0.32″. To mount the gas spring with a release control, use an eyelet bracket (not included; see page 1204) for the push-button style control; a bolt or pin for the lever-style control.

Push-button style has a hydraulic cable that lets you actuate the gas spring from a distance (see listing). It has a 1.97″ long M16 threaded body for panel mounting.

Lever style has a 5.12″ long lever that attaches to either side of its eyelet connector.

Gas Springs— Ball Stud Thread Size: M8. Rod and End Thread Size: M10.

Miniature High-Force Gas Springs

Small in size, but not in strength, these gas springs are often used to replace coil springs in metal stamping and die-spring applications. They match the diameter and stroke length of coil die springs, but offer much more force. Compared to other gas springs, they exert high force with short stroke lengths. They can also be mounted with the rod in any position.

All springs have a steel cylinder and piston rod. Seal is polyurethane. A rod scraper protects the seal from debris, prolonging the life of the spring. Temperature range is 32° to 176° F. Color-coded labels help ensure you choose the correct replacement. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Mounting flanges allow panel mounting. They slide onto a groove in the cylinder body and stay in place with included clips. Mounting fasteners are not included.

Close-Assist Gas Springs with Ball-Joint Fittings

Also known as tension or traction gas springs, the force on these springs pulls the piston rod inward, operating in the opposite direction of other gas springs. At rest, the spring is compressed; you have to pull to extend it. Great for use on doors and hoods that need to stay shut.

All of these gas springs come with the most versatile fittings: ball-joint fittings consisting of a ball socket and ball stud that rotate in any direction to compensate for misalignment. The ball-joint fittings can be easily removed. The ball diameter is 13 mm.

The cylinder and piston rod are steel. Seal is rubber. Temperature range is –22° to +176° F. **To Order:** Please specify force from those available below. If you don't see the exact force you need, round up to the closest available force.

Compact Gas Springs— Offer shorter compressed and extended lengths without sacrificing stroke length.

About Shock-Absorber Energy Capacity

$$\text{Energy Cap. (in.-lbs.)} = \frac{\text{Weight (lbs.)}}{772} \times \text{Velocity}^2 \text{ (in. per second)}$$

To determine the shock-absorber ***energy capacity*** you need to stop a horizontal moving load, use the formula shown at left. For example, if you have a 250-lb. load that is moving 25 inches per second: $(250/772) \times 25^2 = 202$ in.-lbs. energy capacity.

Note: Choose an absorber with a *greater* energy capacity than you calculated. Factors such as a driving force or an inclined surface will increase the energy capacity you need.

Threaded-Body Shock Absorbers

Filled with hydraulic fluid, shock absorbers dissipate energy to decelerate fast loads and bring their speed down to zero. They're great for automated applications with air cylinders and linear-motion slides. All of these shock absorbers have a one-piece threaded body; a piston rod, which automatically returns to its extended position; and one hex jam nut for mounting. They can also be mounted with mounting blocks (see page 1209).

Self-Adjusting Shock Absorbers

These shock absorbers automatically adjust to varying impact loads and speeds.

Standard— Have a steel body with black-oxide finish and a stainless steel piston rod (unless noted). Temperature range is 32° to 150° F.

Heavy Duty— Rugged construction allows these shock absorbers to stand up to abuse. All have a PTFE-impregnated stainless steel piston rod and silicone hydraulic fluid, which makes them suitable for food-processing applications. Temperature range is –20° to +140° F. *Steel models* have a high-grade steel body with black-oxide finish. *Stainless steel models* have a Type 17-4 PH stainless steel body.

★ Does not have a bumper. (D) dimension is rod dia. ● For low-load high-speed use. ▲ For high-load low-speed use.
♠ Includes two hex jam nuts. Piston rod is chrome-plated steel.

Adjustable Shock Absorbers

A knob lets you adjust how much deceleration and cushion these shock absorbers will provide. All have a steel body with black-oxide finish and a chrome-plated steel piston rod, unless noted.

Standard— Temperature range is 14° to 176° F. Come with two hex jam nuts.

Heavy Duty— More rugged construction withstands higher impact with shorter stroke lengths. Temperature range is 32° to 150° F.

★ Made of zinc alloy.

Light-Capacity Adjustable Shock Absorbers

Also known as snubbers, these shock absorbers are perfect for small-load applications as well as applications with frequent cycling. They use a cushion of air instead of hydraulic fluid to reduce velocity and vibration. To adjust for varying loads and speed, simply turn a knob to control the air flow rate. Using air also means you won't have to worry about fluid leaks.

Body is borosilicate glass encased in EPDM rubber, making these shock absorbers corrosion resistant and lightweight. The piston rod automatically returns to its extended position. Temperature range is –67° to +158° F.

Stud Mount—Have a 3/8″-32 mounting stud with a nut under the adjusting knob (the knob is removable). Maximum mounting panel (or bracket) thickness is 0.125″. Piston rod is urethane.

Flange Mount—Have a 1/8″ thick mounting flange with four 0.17″ dia. mounting holes. Piston rod is acetal with a urethane tip.

Precision Adjustable Shock Absorbers

A finely threaded knob allows you to make precise, consistent adjustments for varying loads and speeds. Both of these hydraulic shock absorbers have a built-in flange with four 0.22″ dia. holes for easy mounting. Body is steel with a baked-enamel finish. Piston rod is chrome-plated steel and automatically returns to its extended position. Bumper is urethane. Temperature range is 14° to 176° F.

Leakproof Adjustable Shock Absorbers

No drips or drops of fluid will leak from these hydraulic shock absorbers. The piston rod is protected by an airtight seal. Since the seal doesn't slide, low wear leads to longer life. All of these shock absorbers adjust for varying loads and speeds. They also have a nickel-plated steel body and silicone fluid, which makes them suitable for food-processing applications. Piston rod is Type 440 stainless steel and automatically returns to its extended position. Temperature range is 40° to 130° F.

Mounting Block—Made of aluminum.

Automotive-Style Shock Absorbers

60025K32 and K16

Like the shock absorbers in your car, these isolate vibration caused by sudden impact to one surface so that the vibration transferred to the second surface is minimized. The body is steel with a painted finish. Piston rod is chrome-plated steel. Temperature range is –45° to +190° F.

Models 60025K32 and *K16* are gas charged and automatically return to their extended position.

Model 4432T11 returns to its extended position via an external spring.

Adjustable Air Springs

Mini Sleeve Style

Sleeve Style

Single-Tire Style

Double-Tire Style

Triple-Tire Style

Inflation Valve (Sold Separately)

In addition to controlling vibration, these high-strength flexible springs are perfect for lifting and/or moving objects. They're easy to install and can be used vertically, horizontally, and at an angle. Maintenance is also a breeze because they don't require lubrication.

Made of neoprene rubber (unless noted), these springs have a sleeve or tire design with corrosion-resistant metal retainers at each end. Inflate them with compressed air for most applications. Maximum pressure is 100 psi. Temperature range is –20° to +135° F (unless noted).

For vibration-control applications, the air pressure in the springs serves as an energy-absorbing medium to provide maximum vibration and shock isolation, load leveling, and height control. The springs work best at frequencies above 400 cycles per minute. Loads and height can be varied by adding or exhausting air.

To pick the right spring for your vibration-control applications, look at the maximum force of the spring when fully extended and fully compressed. The spring needs to carry the whole weight of your load. Maximum OD is also important—the entire spring needs clearance around it.

For lifting/moving applications, the air pressure in the springs exerts the force needed to produce a stroke for lifting, pushing, gripping, compacting, and tensioning. To pick the right spring for your lifting/moving applications, look at the maximum force of the spring when fully extended. The spring needs to carry the whole weight of your load. The usable stroke is the travel the spring provides.

Mini Sleeve Style and ***Sleeve Style Springs—*** Offer superior vibration isolation. Installation may require additional side support.

Mini sleeve style does not require a minimum pressure.

Sleeve style require at least 10 psi of pressure.

Single-, Double-, and ***Triple-Tire Style Springs—*** Provide lower compressed height and do not require a minimum pressure. They need external stops to prevent overcompression.

ⓘ For additional information about these air-powered springs, including mounting dimensions, performance data, and schematics, go to mcmaster.com and search for **9538KAC**.

● Made of natural rubber. Temperature range is –56° to +135° F.

★ Spring has threaded mounting studs rather than holes.

About Extension Springs

Holding a hatch door closed, tensioning a cable, and returning an air cylinder to its starting point are a few uses for extension springs. The more you stretch (or extend) the springs, the greater the force the springs will exert to pull the two points back together.

Extension springs are made of steel music wire (for high strength), spring-tempered steel (for heat resistance), or stainless steel (for corrosion resistance). They are available with loop and hook ends.

Minimum Load—The pounds of force it takes to start to extend the spring.

Maximum Load—The pounds of force it takes to fully extend the spring.

Rate—As you stretch an extension spring, it gets harder to pull. The higher the rate, the harder it is to stretch the spring.

Extension Spring Anchor Studs

Standard

Swiveling

Attach an extension spring to a stud, and then thread the stud into your part for a secure connection. **Steel studs** have a black-oxide finish for mild rust resistance. **18-8 stainless steel studs** offer excellent corrosion resistance.

Swiveling Studs—Have a head that swivels 360° so the spring stays straight and properly coiled.

Custom Extension Springs

9533K21 Hook

9533K81 Loop

9533K41 Double Loop

9533K71 Side Loop

Whatever the size, we'll get the spring you need. Send us a description, drawing, or sample of the extension spring you require.

To Order: Please specify the following: 1) Part number for the spring end style; if you don't see your end style, use 9533K999. 2) Material: music wire, spring-tempered steel, stainless steel, or other material. 3) Finish: plain, galvanized, zinc plated, or passivated (for stainless steel only). 4) Dimensions: overall length, body length, spring OD, and wire diameter.

For information about extension springs, see page 1211.

Precision Extension Springs with Hook Ends

Springs are manufactured to specific OD, extended length, minimum load, and rate tolerances.

Zinc-Plated Steel Music Wire Springs—Meet ASTM B633 and offer some corrosion resistance.

Black-Oxide Steel Music Wire Springs—Are treated for durability and rust resistance.

Type 302 Stainless Steel Springs—Meet ASTM A313 and offer excellent corrosion resistance.

Also Available: Springs with a certificate of compliance. Please ask for 9432K999 for steel music wire springs or 9433K999 for Type 302 stainless steel springs and specify the spring part number.

Specification	Tolerance
OD: 0.094″ to 0.188″	+0.003″/–0.005″
OD: 0.25″ to 0.5″	±0.008″
OD: 0.625″ to 0.75″	±0.015″
Minimum Load	±15%
Rate, lbs./inch	±10%

For information about extension springs, see page 1211.

Ultra-Precision Extension Springs with Loop Ends

When extremely tight OD and rate tolerances are critical, these are the springs to choose. All offer outstanding wear resistance, which makes them perfect for applications in motion.

Type 302 Stainless Steel Springs—Offer excellent corrosion resistance.

Also Available: Springs with a certificate of compliance. Please ask for 9044K999 for steel music wire springs or 9065K999 for Type 302 stainless steel springs and specify the spring part number.

Specification	Tolerance
OD: 0.180″	±0.002″
OD: 0.181″ to 0.240″	±0.003″
OD: 0.241″ to 0.500″	±0.004″
Rate, lbs./inch	±5%

Cut-to-Length Extension Springs

Keep these long springs on hand so you can cut the right length whenever you need it. All of these springs have straight-cut ends, which allow you to bend the end coils into hook or loop ends. To determine the spring rate, take the rate constant and divide it by the length (in inches) you cut.

Type 302 Stainless Steel Springs—Offer excellent corrosion resistance.

Safety Extension Springs

While ordinary extension springs can be overloaded to failure, these springs have drawbars to safeguard against overextending.

Zinc-Plated Spring-Tempered Steel Springs—Offer some corrosion resistance.
Type 302 Stainless Steel Springs—Offer excellent corrosion resistance.

Extra-Stretch Extension Springs

Designed to go the distance, these springs stretch up to three times their original length—much further than traditional extension springs, tie downs, and shock cords. The springs are made of rubber tubing that's encapsulated in a polypropylene fabric sleeve. All have 2″ long, zinc-plated steel hooks with a 5/16″ spring-loaded latch opening at each end. Do not use them to hold overhead loads. Operating temperature range is 30° to 130° F.

For information about extension springs, see page 1211. For information about compression springs, see page 1220.

Spring Assortments

Keep a variety of springs on hand. Extension springs have hook or loop ends; compression springs have open, closed, or closed and ground flat ends.

Assortments in plastic boxes and **steel cabinets** are divided into compartments and most have a chart on the lid that identifies the spring for each compartment.

To Order: For refill springs, please ask for the refill spring part number listed below, and specify the spring number (if provided on the chart located on the inside lid of your container) or the spring length, OD, and wire diameter desired.

No. of Springs	No. of Sizes	Spring Material	Spring Size Range: Length	Spring Size Range: OD	Spring Size Range: Wire Dia.	Container	Assortments		Refill Springs

Constant-Force Springs

Typically used as retractors in tape measures and cable reels, these springs are wound into a tight coil to provide uniform force throughout extension and retraction. They can be wrapped around a shaft, spool, or rod; allow for 1½ extra coils on the shaft at full extension to hold the spring in place. All of these springs are made of Type 301 stainless steel. The free end has one hole for attaching a load to the spring. Wound ID, wound OD, and load tolerances are ±10%.

About Compression Springs

When the ends of a compression spring are pushed together, the ends push back to resist the load.

Springs are made of steel music wire (for high strength), spring-tempered steel wire (for heat resistance), or stainless steel (for corrosion resistance). Some steel music wire springs and spring-tempered steel wire springs are plated for increased corrosion resistance.

Compressed Length— The length of a compression spring when the given load is applied.

Deflection @ Load— The distance a spring compresses (from overall length to compressed length) when the given load is applied.

Load— The pounds of force required to compress a spring to its compressed length.

Rate— A change in load per inch (or mm).

Note: The spring ID is equal to the spring OD minus two times the wire diameter.

Custom-Made Compression Springs

9534K21 Open Ends

9534K41 Closed Ends

9534K31 Open and Ground Flat Ends

9534K51 Closed and Ground Flat Ends

Need a special size? Provide us with a complete description, fax a drawing, or send a sample of the compression spring you need. We'll make the spring to your specifications.

To Order: Please specify the following:

1. Part number for the spring end style shown at left
2. Material: music wire, spring-tempered steel, stainless steel, or other material
3. Finish: plain, galvanized, zinc plated, or passivated (for stainless steel only)
4. Dimensions: overall length, spring OD, wire diameter, and space between coils

Continuous-Length Compression Springs

Springs have open ends and can be cut to the length you need. Great for manufacturing, utility, and maintenance jobs. To determine the length (in inches) to which to cut your spring, take the spring constant and divide it by the number of coils per inch. Then take this value and divide it by your desired spring rate in lbs./inch. To cut springs up to 3/8″ OD, use a hand-held nipper. For larger ODs, use an abrasive cutoff saw.

Spring Forming Tools

Compression, Extension, and Torsion Spring Winders

Quickly wind your own extension, compression, and torsion springs from 1/8″ to 1 1/4″ IDs in both right- and left-hand coils. Tools handle round, square, and flat wire with a max. 3/16″ dia. They include a pitch gauge to regulate coil spacing and a wire holder to prevent tangling.

Master Kit— Includes spring winder; cam lock tension release for quick wire release and accurate sizing; two handles for large and small mandrels; six 12″ long mandrels in 1/8″, 1/4″, 3/8″, 1/2″, 5/8″, and 3/4″ sizes; wrench; four 1/4-lb. coils of 0.029″, 0.047″, 0.067″, and 0.085″ diameter spring wire; spring end-looping tool; and a multipurpose nipper that cuts wire up to 0.100″ diameter.

9676K1 ..... $411.67

General Purpose Kit— Same as the Master Kit, but it does not include the looping tool and nipper.

9676K4 ..... $289.15

Utility Spring Kit— Includes spring winder, one handle, wrench, and four 12″ long mandrels in 1/8″, 1/4″, 3/8″, and 1/2″ sizes.

9676K2 ..... $226.38

Spring Winder

Spring End-Looping Tool

Spring End-Looping Tool

Easily form perfect loop and hook ends on coiled extension springs with 1/8″ to 1/2″ ODs and up to 0.062″ wire diameter. Tool includes an adjustable stop with wrench as well as small and large forming punches. Overall length is 6 1/2″.

9674K3 ..... $115.69

Manual Spring-Winding Tool

For use with a lathe and mandrel, this 7″ long tool feeds wire up to 3/16″ dia. Wire tension and the distance between turns are adjustable.

9527K11 ..... $81.99

Metric Precision Compression Springs

These precision-manufactured metric springs meet rigorous DIN 2095 specifications. They are made to strict outside diameter (OD) and spring rate tolerances and are stress relieved through heat treating. Tolerance checks are done throughout the manufacturing process with load test verification done at the end of the process. All springs have closed and ground flat ends. ***Music wire springs*** meet DIN 17223, Class C, 1.1200. ***Type 302 stainless steel springs*** meet DIN 17224 per 1.431.

Also Available: Springs with a certificate of compliance. Please ask for 94125K999 and specify spring part number.

OD	OD Tolerance

For information about compression springs, see page 1220.

Custom-Made Precision Compression Springs

Need a special size? Provide us with a complete description, fax a drawing, or send a sample of the compression spring you need. We'll make the spring to your specifications.
Note: Springs will have the same tolerances as the precision compression springs on the previous page.

To Order: Please specify the following:
1. Part number for the spring end style shown at right
2. Material: music wire or Type 302 stainless steel
3. Dimensions: overall length, spring OD, wire diameter, and space between coils

1084T21 Open Ends

1084T41 Closed Ends

1084T31 Open and Ground Flat Ends

1084T51 Closed and Ground Flat Ends

For technical drawings and 3-D models, go to mcmaster.com.

Die Springs

About Die Springs

Die springs are a special type of compression spring that can withstand high loads with minimum deflection. They are used for die applications, heavy duty press operations, stripper plates, pressure rods, and knockout presses.

Deflection—The distance a spring compresses when a given load is applied. It is commonly expressed as a percentage of overall length.

Load—The force applied to a spring that causes deflection, generally given in pounds.

Rate—A change in the load per each inch of deflection.

A general rule in die spring selection is to use several short springs rather than one long spring to produce the required load with the least amount of deflection.

Spring-Tempered Steel Die Springs

Great for die-press applications requiring high load capacity and moderate deflection. Springs have closed and ground flat ends.

Square-wire springs have a square cross section that allows increased compression and high load capacity. They evenly distribute stress to reduce breakage and resist fatigue.

Oval-wire springs have an oval cross section that further increases load capacity.

Square Wire

For information about die springs, see page 1225.

Chrome-Silicon Steel Die Springs

Choose these springs when you need the top performer in high-stress die and heavy duty compression spring applications. All are shot peened to reduce material stress, giving them more tensile strength and a longer life. Spring ends are closed and ground. Springs follow the Raymond color code.

For information about die springs, see page 1225.

Maximum-Load Alloy Steel Die Springs

Use these larger round-wire die springs wherever you need maximum load and stress resistance. Springs are made from alloy steel that's selected for its uniformity and strength. All are tumble-blasted using steel media to reduce material stress, giving them more tensile strength and a longer life. Spring ends are closed and ground.

Fits Hole Size	Fits Rod Size	O'all Lg.	Wire Dia.	Defl. % @ Load	Load, lbs.	Rate, lbs./inch

Die-Spring Screw Caps

Screw caps provide backing for springs and can also be used to control spring tension. Install by drilling and tapping a hole through your die set. Screw caps are made of case-hardened steel and have a black-oxide finish.

Thread Size	Hex Size	Thickness		
7/16″-20	3/16″	1/4″	96235K3	$2.13

Die-Spring Cages

Protect dies from damage caused by spring failure. Cages enclose the spring and retain spring fragments, making it easy to remove them in the event of spring failure. Cages are made of 0.049″ thick cold-rolled steel. Cage length should be as close as possible to the distance traveled by the die.

Length	3/4″ ID		1″ ID		1 1/4″ ID		1 1/2″ ID		2″ ID

Continuous-Length Spring-Tempered Steel Die Springs

At 36″ long, these die springs are able to handle toolmaking requirements for long stock and can also be cut to size. Springs have open ends. To determine the length (in inches) to which to cut your spring, take the spring constant and divide it by the number of coils per inch. Then take this value and divide it by your desired spring rate in lbs./inch. To cut springs, use an abrasive cutoff saw.

Type 302 Stainless Steel Conical Compression Springs

Cone-shaped springs allow the coils to nest within each other when deflected, providing a nearly constant spring rate and a compressed length that's smaller than a normal compression spring. Springs have closed ends. Sold in packages of 3, unless noted.

Type 302 Stainless Steel and Music Wire Torsion Springs

CAD

90° Deflection Angle Clockwise (Left-Hand) Wound

90° Deflection Angle Counterclockwise (Right-Hand) Wound

180° Deflection Angle Clockwise (Left-Hand) Wound

180° Deflection Angle Counterclockwise (Right-Hand) Wound

Deflection Angles/Degrees of Rotation

Torsion springs are used to maintain pressure over a short distance in a rotational direction. They're normally supported by a rod, mandrel, or arbor. Torsion springs are commonly found in clothespins, spring clamps, and mousetraps, and typically used in actuators, motors, and spring-return mechanisms.

Squeezing the torsion spring reduces the spring OD, making the spring tighter around the shaft and increasing the body length. The body length is listed as spring length @ torque in the table below. *Note:* Since the spring gets tighter as it is squeezed around the shaft, we have listed a recommended maximum rod OD for each spring. Using a larger rod OD will interfere with the spring motor.

Torsion springs should be used in the direction in which the coils are wound. Choose from four different deflection angles/degrees of rotation for your desired range of motion. These figures represent the angle between the legs of the spring as well as the maximum spring rotation. For example, a spring with a 90° deflection angle/degrees of rotation has a 90° angle between its legs, and it will rotate a maximum of 90°. *Note:* All springs will rotate until their legs are parallel.

To Order: Please specify spring wind direction: clockwise or counterclockwise.

Custom-Made Torsion Springs

Need a special size? Provide us with a complete description, fax a drawing, or send a sample of the torsion spring you need. We'll make the spring to your specifications. For information about torsion spring specifications, please refer to the illustrations at the top of the page.

To Order: Please specify the following:

1. Part number for the deflection angle listed at right
2. Clockwise or counterclockwise wound
3. Material: music wire, stainless steel, or other material
4. Finish: plain or zinc plated
5. Dimensions: spring OD, wire diameter, leg length, and number of active coils

Deflection Angle	
90°	9535K21
180°	9535K31
270°	9535K41
360°	9535K51

About Belleville Disc Springs

These conical springs will hold large loads in small spaces. They're often used under bolt heads to maintain tension and keep the bolt from loosening. Also used to maintain tension on valves and bearings. The springs will return to their specified height repeatedly after constant, intermittent, and cyclic loading.

Use singly, or stack as shown to increase load and deflection. Springs stacked parallel increase the load by the number of springs used. Springs stacked inverted increase the deflection of the spring by the number of springs in the stack while retaining the load of only one across the span of the stack. Springs stacked parallel and inverted increase both load and deflection.

Springs are designed to fit over rods (min. ID) and into holes (max. OD).

Deflection @ Load—Distance the spring compresses when the given load is applied.

Flat Load—Load at which the spring is completely compressed.

Stacked Parallel *Stacked Inverted* *Stacked Parallel and Inverted*

High-Carbon Steel and Stainless Steel Belleville Disc Springs

High-carbon steel offers higher strength, while ***stainless steel*** has better corrosion resistance and can withstand higher temperatures. Stainless steel springs up to 0.072″ thick conform to AMS 5906, SAE Type 302. Springs 0.073″ and up are Type 17-7 PH stainless steel per AMS 5528.

(Continued on following page)

For information about Belleville disc springs, see page 1229.

High-Carbon Steel and Stainless Steel Belleville Disc Springs

(Continued from previous page)

High-carbon steel offers higher strength, while ***stainless steel*** has better corrosion resistance and can withstand higher temperatures. Stainless steel springs up to 0.072″ thick conform to AMS 5906, SAE Type 302. Springs 0.073″ and up are Type 17-7 PH stainless steel per AMS 5528.

							Grade 1074 High-Carbon Steel			Stainless Steel

For information about Belleville disc springs, see page 1229.

Precision Metric Belleville Disc Springs

These springs are made according to the requirements of DIN 2093, which specifies spring dimensions, load rates, and deflections. Springs up to 28.5 mm minimum ID are sold in packages of 12, unless noted. Springs with minimum ID of 30.5 mm and higher are sold individually.

Stainless Steel— Although stainless steel is not listed in DIN specifications, the stainless steel springs are made to DIN requirements.

DIN Group 1— Springs are cold formed.

DIN Group 2— Springs are cold formed and fine blanked; IDs and ODs are machined.

Inconel High-Temperature Belleville Disc Springs

Made of Inconel, a high-strength nickel alloy, these springs are corrosion resistant and can withstand temperatures from –400° to +1100° F. Load and flat-load tolerances are ±10%.

Stainless Steel Flange Belleville Disc Springs

Designed to fit flange bolt sizes, these springs maintain tension and prevent bolts from loosening in flange applications such as piping, compression joints, and valve and pump connections. They absorb stresses from flange movement caused by mechanical shock and thermal expansion and contraction. This prevents damage to the bolt and joint. Springs are made from 17-7 PH stainless steel.

Ball Bearing Belleville Disc Springs

Install these springs against ball bearings to handle axial loads and reduce noise, float, and end play of the bearings. Flat loading is not a factor with these springs because they are only used to apply slight tension against the bearing.

Wave Disc Springs

Use wave disc springs (also known as wave spring washers) for light thrust loads in small spaces. They're also great for ball bearings because they handle axial loads and reduce noise, float, and end play of the bearings. All springs have three waves, unless noted.

Curved Disc Springs

Curved disc springs are excellent for light loads in small spaces. Often used to reduce axial end play, they exert relatively light thrust loads. They're designed to fit standard rod and hole sizes. Package quantity is 10, unless noted.

High-Carbon Steel Finger Disc Springs

Finger springs combine the flexibility of disc springs and the axial-load strength of wave springs. They're designed to absorb vibration and reduce noise, end play, and skidding wear on parts rotating at high speed. Made from Grade 1074 high-carbon steel. All have six 0.125″ high "fingers", unless noted. Package quantity is 10.

■ Has three 0.0937″ high fingers.

Polyurethane Flat Disc Springs

Flat disc springs hold high loads in small spaces, similar to Belleville springs. They are made from polyurethane with a durometer of 95A; tolerance is +3. They're nonmagnetic and resist oxidation, oil, abrasion, and deterioration from exposure to ozone. Load tolerance is ±25%. Deflection range is 0-10% for static applications (not to exceed 10%); 0-20% for dynamic (not to exceed 20%).

When stacked, polyurethane springs must be separated by rigid flat washers (see illustration). The washers must be large enough to cover the entire surface of the disc springs. For washers, see 98017A on page 3220.

Ultra-Precision Compression Springs

Our ultra-precision compression springs are the ultimate springs for applications that require OD, deflection at load, and spring rate tolerances. They are stress-relieved through heat treatment and have closed and ground flat ends. Type 302 stainless steel springs offer the best corrosion resistance.

Also Available: Springs with a certificate of compliance. Please ask for 9001T999 for steel music wire or 9002T999 for Type 302 stainless steel springs and specify the part number.

Elastomeric Die Springs

Don't let their small size fool you—these springs absorb the maximum amount of impact in the minimum amount of space. Made of a polyester-based elastomer that is 10 times more durable than most rubber and 20 times more durable than polyurethane, bumpers resist gasoline, oil, and diesel fuel. Mount with a screw (not included). For indoor and outdoor use. Temperature range is –40° to +120° F. Color is black.

Energy, measured in ″in.-lbs.,″ is calculated in one of two ways. For something that is dropped, energy equals the weight of the item multiplied by the distance it was dropped. For something moving in a horizontal direction, energy equals the mass of the item multiplied by the square of its velocity (0.5 mv^2). *Peak dynamic force* is the load on the bumper at its maximum deflection at its rated energy. *Deflection* is the total travel of the bumper from an uncompressed to compressed state.

Roller Conveyors and Stands

Easily move light-to-medium weight flat- and uneven-bottom objects. *Note:* Capacities are based on an evenly distributed load with a stand at each end. Capacities for 10-ft. lengths can be increased to those listed for 5-ft. lengths by adding a center stand. The length of the material you're conveying should be at least three times the roller spacing.

Conveyors

Roller Conveyor Profile

Frames are 2½″ high and have two hooks at one end to connect conveyor sections. Rollers have ¼″ dia. spring-loaded axles and steel ball bearings.

1⅜″ dia. rollers project 3/16″ above the frame. Overall conveyor height is 2 11/16″.

1.9″ dia. rollers project ½″ above the frame. Overall conveyor height is 3″.

Steel conveyors are stronger than aluminum and have a galvanized finish.

Aluminum conveyors are lighter than steel with better corrosion resistance.

Also Available: 90° curves. Please ask for 5825K777 and specify conveyor overall width, roller diameter, and material (steel or aluminum).

Stands

Bolt-On

Portable

Mobile

Stands are steel with a blue powder-coated finish. *Note:* Stands are compatible only with the conveyors listed above.

Bolt-On— Stands attach to conveyor frames with 5/16″-18 bolts (not included). Mounting plates adjust to allow you to set the conveyor at a decline.

Portable— Conveyor rests on top of the stand.

Mobile— Stands have four swivel casters with brakes. Conveyor rests on top of the stand.

Washdown Roller Conveyors and Stands

Suitable for food equipment and washdown applications, conveyors are made of stainless steel and meet USDA standards. *Note:* Capacities are based on an evenly distributed load with a stand at each end. Capacities for 10-ft. lengths can be increased to those listed for 5-ft. lengths by adding a center stand. The length of the material you're conveying should be at least three times the roller spacing.

Conveyors

Roller Conveyor Profile

Rollers are 1⅝″ dia. and project 5/16″ above the frame. Roller spacing is 3″. Frames are 2½″ high. Overall conveyor height is 2 13/16″. To join conveyor sections, use a common stand. Rollers have 7/16″ hex spring-loaded axles and plastic-encased stainless steel ball bearings.

Also Available: 90° curves. Please ask for 5811K777 and specify conveyor overall width.

O'all Wd.	Between Frame Wd.	5-ft. Lengths: Cap., lbs./ft.			10-ft. Lengths: Cap., lbs./ft.

24″	57585K13	88.90	57585K23	102.37	57585K33	115.76

For replacement rollers, see pages 1242-1244.

Heavy Duty Roller Conveyors and Stands

Choose these durable steel conveyors for more demanding shipping and assembly applications. *Note:* Capacities are based on an evenly distributed load with a stand at each end. Capacities for 10-ft. lengths can be increased to those listed for 5-ft. lengths by adding a center stand. The length of the material you're conveying should be at least three times the roller spacing.

Conveyors

Rollers are 1.9″ diameter and project 1/4″ above the frame. Frames are 3 1/2″ high and have coupling plates to connect sections. Overall conveyor height is 3 3/4″. Frames have a green powder-coated finish. Rollers have 7/16″ hex spring-loaded axles and steel ball bearings.

Also Available: 90° curves. Please ask for 5746K888 and specify conveyor overall width.

Super Duty Roller Conveyors and Stands

Our strongest roller conveyors are built to handle the heaviest loads. Made of heavy-gauge steel. *Note:* Capacities are based on an evenly distributed load with a stand at each end. Capacities for 10-ft. lengths can be increased to those listed for 5-ft. lengths by adding a center stand. The length of the material you're conveying should be at least three times the roller spacing.

Conveyors

Rollers are 2 1/2″ diameter and project 1/4″ above the frame. Frames are 4″ high and have coupling plates to connect sections. Overall conveyor height is 4 1/4″. Rollers have 11/16″ hex spring-loaded axles and steel ball bearings that are double shielded to keep debris out and to extend bearing life.

Also Available: 90° curves. Please ask for 5747K888 and specify conveyor overall width.

Bench-Top Adjustable Roller Conveyors

Designed to rest on your work surface, these conveyors have two sets of axle holes so you can position the conveying surface 1/8″ above the frame or 3/4″ below the frame (position below to use the frame as a guide rail). *Note:* Capacities are based on an evenly distributed load. The length of the material you're conveying should be at least three times the roller spacing.

Rollers are 3/4″ dia. Roller spacing is 1″. Frames are 2 1/2″ high. Overall conveyor height is 2 5/8″. Rollers have 1/4″ dia. spring-loaded axles and steel ball bearings.

Steel conveyors are stronger than aluminum and have a galvanized finish.

Aluminum conveyors are lightweight and corrosion resistant.

Skate Wheel Conveyors & Ball Transfer Plates

For replacement skate wheels, see page 1246.

Lightweight Skate Wheel Conveyors and Stands

Easier to move than roller conveyors, skate wheel conveyors are for light duty loading and unloading of flat-bottom objects. *Note:* Capacities are based on an evenly distributed load with a stand at each end. Capacities for 10-ft. lengths can be increased to those listed for 5-ft. lengths by adding a center stand. The length and width of the material you're conveying should be at least three times the axle spacing.

Conveyors

Wheels are 1.9″ dia. and project 3/8″ above the frame. Frames are 2 1/2″ high and have hooks at one end to connect sections. Overall conveyor height is 2 7/8″. Axles are 1/4″ dia.; axle spacing is 3″. Wheels have steel ball bearings.

Steel frames are stronger than aluminum and have a galvanized finish. *Steel wheels* are durable and have a zinc-plated finish. *Plastic wheels* are nonmarring. Color is black. **To Order:** Please specify steel or plastic wheels.

Aluminum frames are lighter than steel with better corrosion resistance.

Also Available: 90° curves. Please ask for 56755K888 and specify frame material, skate wheel material (for steel conveyors), and conveyor overall width.

Flexible Skate Wheel Conveyors

Accordion-style side rails and swivel casters with brakes let you quickly curve, expand, and retract these conveyors. They have 1.9″ dia. skate wheels for flat-bottom objects in assembly lines or packaging and shipping applications. Wheels project 3/8″ above the frame. Conveyors have telescoping legs to adjust the height and brackets to connect sections. *Note:* Capacities are based on an evenly distributed load.

Steel frames are stronger than aluminum and have a zinc-plated finish. Conveyors have a handle that stops boxes at one end. Axles are 5/16″ dia.; axle spacing is 5 1/4″ when the conveyor is fully expanded.

Steel wheels have steel ball bearings for impact resistance.

Nylon wheels resist moisture and corrosion. Wheels are red and have nylon bearings.

Aluminum frames have aluminum side rails and black powder-coated steel legs. Axles are 1/4″ dia.; axle spacing is 5″ when the conveyor is fully expanded. Wheels are made of black polyolefin, which resists moisture and abrasion. Bearings are brass.

Multidirectional Miniature Ball Transfer Plates

Also known as ball-bearing parallels, these transfer plates have multidirectional balls that project from the top and bottom to position and move small, heavy items over short distances. Plates are steel with a black-oxide finish and have 3/8″ dia. steel balls. Overall height is 3/8″.

Replacement Ball Transfer 5689K41 $3.12

For replacement wheels, see page 1246.

Multidirectional Ball Transfer Conveyors and Stands

Use these ball transfer conveyors alone or add them to the Heavy Duty Roller Conveyors on page 1237 to rotate and position material along your conveying line. *Note:* The length and width of the material you're conveying should be at least three times the ball spacing.

Conveyors

Balls project 1/4″ above the frame. Frames are 3 1/2″ high and have coupling plates at each end to connect conveyor sections. Overall conveyor height is 3 3/4″. Frames are steel with a green powder-coated finish and have 1″ dia. steel balls with zinc-plated steel housings.

Conveyor Rails

When you don't need the support of a complete conveyor, these rails are a lightweight and economical solution. Use rails to convey packages and pallets in flow racks and in confined spaces.

Frames are galvanized steel. Wheels have steel ball bearings, except ABS plastic wheels, which have a plain bore (no bearings).

Styles 6 and *7* have flanged wheels that guide material. *Style 6* has flanges on the left side when facing the unloading end of the rail. *Style 7* has flanges on the right side when facing the unloading end of the rail.

Heavy Duty Conveyor Rails

All-steel construction gives these rails the durability to carry heavy loads. Wheels have double ball bearings for handling high capacities and extending wheel life. Wheel spacing is 25/32″. Frames and wheels have a plain finish. Rails can be drilled for mounting or welded in place.

Wheel Size Dia.	Wheel Size Wd.	Cap., lbs./sq. in.	Frame Wd. (A)	O'all Ht. (B)	O'all Wd. (C)	5-ft. Lengths		10-ft. Lengths

Build-Your-Own Corrosion-Resistant Conveyor Rails

Wheels Shown with Rail Frame and Spacers

Assemble your own lightweight conveyor rails that are suitable for washdowns. Wheels have a built-in bracket that snaps into the aluminum frame (sold separately). Frames can be cut to your desired length and drilled for mounting. They have interlocking sides so you can connect rails side by side. Minimum wheel spacing is 1⅛″. Use spacers (sold separately) to increase wheel spacing by ⅞″. Multiple spacers can be used.

Wheels are acetal and have a plain bore (no bearings). Wheel diameter is 1″. Color is red for *½″ wide wheels* and white for *9/16″ wide wheels*. Axle is stainless steel for *½″ wide wheels* and nylon for *9/16″ wide wheels*.

Multidirectional Conveyor Rails

Ball Transfer Rails

With Stud-Mount Ball Transfers

With Flange-Mount Ball Transfers

Ball transfer rails let you rotate material in any direction. Frames are galvanized steel and have 1″ dia. steel balls in zinc-plated steel housings. Weld rails in place.

Stud-mount ball transfers are attached to the rail with a ¼″-20 stud and nut. For replacement ball transfers, see page 1247.

Flange-mount ball transfers are riveted in place.

Ball Spacing	Cap., lbs./Ball	Frame Wd. (A)	O'all Ht. (B)	*5-ft. Lengths*		*10-ft. Lengths*	
With Stud-Mount Ball Transfers							
3″	65	2½″	2½″	5697K71	$67.27	5697K81	$122.36
4″	65	2½″	2½″	5697K72	54.36	5697K82	97.27
With Flange-Mount Ball Transfers

6″	75	2½″	2 3/16″	5697K23	49.74	5697K43	95.64

Low-Profile Ball Transfer Rails

Choose this ball transfer rail when space is limited. A smaller version of the rails shown above, it has ¾″ dia. steel balls that let you rotate material in any direction. Frame is steel with a black powder-coated finish and includes fasteners for mounting. Not rated for capacity.

Ball Spacing	Frame Wd. (A)	O'all Ht. (B)	*18″ Length*	
1½″	2″	1¼″	5895K1	$24.80

Skate Wheel Rails

Wheels have miniature rollers that move material across the width as well as the length of the rails. Frames are galvanized steel and have ¼″ dia. holes for mounting (fasteners not included). Wheels are 1.9″ dia. and 1 5/16″ wide. They're made of corrosion-resistant acetal and have a plain bore (no bearings). Color is gray. For replacement wheels, see page 1246.

Wheel Spacing	Cap., lbs./Wheel	Frame Wd. (A)	O'all Ht. (B)	O'all Wd. (C)	*5-ft. Lengths*		*10-ft. Lengths*	
2″	25	1½″	2½″	2 5/32″	57705K71	$389.47	57705K72	$670.18
4″	25	1½″	2½″	2 5/32″	57705K73	219.30	57705K74	426.32

Roller Conveyor Rails with Package Stop

Roller Conveyor Profile

Support heavy loads in pallet flow and conveying applications. The removable package stop prevents material from falling off the rail. Frames and rollers are steel with a galvanized finish. Roller diameter is 1.9″; roller spacing is 2″. Rollers have steel ball bearings. Mounting slots are ⅞″×⅜″ and spaced 2″ center-to-center.

Cap., lbs./Roller	Frame Wd. (A)	O'all Ht. (B)	*5-ft. Length*		*10-ft. Length*	
200	6½″	3½″	5235T52	$141.33	5235T51	$291.67

Heavy Duty Belt Conveyors

12-ft. Length with 3 Stands

Move heavy boxes and irregularly shaped items in assembly line, sorting, and packing applications. Conveyors have a 3½″ high galvanized steel bed, a black PVC belt, and a ½-hp totally enclosed fan-cooled motor. Conveyors run at 60 fpm and include stands that adjust the overall conveyor height from 34″ to 38″. Frames have coupling plates to connect sections. *Note:* Capacities are based on an evenly distributed load.

120-volt AC conveyors have single-phase motors with an on/off switch and a 10-ft. power cord with a three-prong plug. *230/460-volt AC* conveyors have three-phase motors with connections for hardwiring. **To Order:** Please specify voltage.

Also Available: Conveyors with a ½-hp, 90-volt DC motor and a variable speed range of 7-60 fpm. Please ask for 5816K888 and specify belt width and conveyor length.

Also Available: Replacement belts and other replacement parts. For belts, please ask for 5816K666 and specify belt width and conveyor length. For other replacement parts, please ask for 5816K777 and specify belt width and part desired.

Belt Wd.	Frame Wd.	Available AC Voltage	*7-ft. Length with 2 Stands* Cap., lbs.			*12-ft. Length with 3 Stands* Cap., lbs.		*22-ft. Length with 4 Stands* Cap., lbs.

Bench-Top Belt Conveyors

A top-mount motor allows these conveyors to sit right on your bench top, so there's no need for brackets or stands. Guide rails extend 1″ above the conveyor's surface to keep parts from falling off the belt. Conveyors have a 4″ high steel bed, a brown neoprene belt, and a 1/4-hp motor. They operate on 120 volts AC and include a 12-ft. power cord with a three-prong plug.

Note: Capacities are based on an evenly distributed load.

Also Available: Replacement belts. Please ask for 5900K888 and specify belt width and conveyor length.

Belt Wd.	Frame Wd.	Cap., lbs.	Speed, fpm	5-ft. Lengths		10-ft. Lengths

12″	14½″	200	5-60	5900K782	1,830.00	5900K786	1,996.67

Ready-To-Run Mini Belt Conveyors

Run these conveyors right out of the box—plug in and go. Also known as low-profile conveyors. Add surface-mounting brackets (sold separately) for countertop use or two stands (sold separately) for freestanding applications. *Note:* Capacities are based on an evenly distributed load.

Light Duty Aluminum Mini Conveyors

Lightweight and corrosion resistant, conveyors are made of aluminum with a stainless steel bed. T-slotted side rails let you quickly mount items to the conveyor without drilling. T-slot width is 10 mm. Conveyors have a 1⅞″ high bed, an FDA-compliant white urethane belt, and a 1/30-hp motor. They operate on 120 volts AC.

Fixed-speed conveyors have a 7-ft. power cord with a three-prong plug.

Variable-speed conveyors have a 5-ft. power cord with a three-prong plug.

Also Available: Cleated belting. Please ask for 5734K999 and specify belt width, conveyor length, cleat height, and cleat spacing.

Also Available: Replacement belting. Please ask for 5734K91 and specify belt width and conveyor length.

Powered Roller Conveyors

Also known as line-shaft and live-roller conveyors, these are driven by a common drive shaft and urethane belts. Conveyors run at a constant speed of 60 fpm. The drive shaft continues to run even when the accumulation of packages may cause some rollers to stop turning.

Rollers are 1.9″ dia. and have a single groove to accommodate the drive belts. Roller spacing is 3″. Rollers and frames are steel with a galvanized finish, unless otherwise stated. Rollers have steel ball bearings and 7/16″ hex axles. Frames are 5½″ high and have coupling plates to connect sections. Stands bolt to the conveyor frames and adjust the overall conveyor height from 36″ to 48″. For replacement rollers, see page 1244. *Note:* Capacities are based on an evenly distributed load.

Drive sections drive up to 60 ft. of conveyor on either side and can be hardwired for material flow in either direction. They have a ½-hp, three-phase, totally-enclosed fan-cooled motor that operates on 230/460 volts AC.

Extensions connect to drive sections to lengthen the conveyor.

90° curves have tapered rollers that keep packages centered. Rollers are zinc-plated steel.

Also Available: Replacement rollers and stands. Please ask for 5898K777 and specify roller or stand and conveyor part number. For other replacement parts, please ask for 5898K888 and specify part required.

Air-Powered Vacuum Conveyors

Vacuum for Hose Shown with Mounting Bracket

Attach hose, duct hose, or pipe to these vacuums to create a powerful inline conveyor that moves plastic pellets, scrap trim, sawdust, and other bulk solids. A small amount of compressed air at the inlet produces a vacuum at one end and a high-output flow at the other. Vacuums have no moving parts and require minimal maintenance. A complete conveying system requires a vacuum, hose or pipe, filter, regulator (to control flow), and air hose. For filters and regulators, the max. scfm rating at 80 psi should be equal to or greater than the air consumption of the vacuum. See pgs. 269-272 for hose, pgs. 229-237 for duct hose, pg. 48 for pipe, pg. 976 for filters and regulators, and pg. 240 for air hose.

Vacuums for NPT-threaded pipe have male threads on the intake and exhaust ends.

Aluminum vacuums are lightweight and corrosion resistant. ***Steel vacuums*** are more durable than aluminum so they're better for larger, more abrasive objects such as steel shot and glass beads.

Mounting brackets are made of stainless steel. Mounting fasteners not included.

Also Available: Stainless steel vacuums. Please ask for 2379T888 and specify hose/pipe size.

Small Diameter Conveyor Rollers

Roller Conveyor Profile

Rollers have spring-loaded axles and steel ball bearings unless otherwise stated.

Galvanized steel rollers are strong and provide some corrosion resistance.

Aluminum rollers are lightweight and corrosion resistant.

PVC rollers are lightweight and nonmarking. Rollers have plastic-encased stainless steel bearings. Temp. range is 30° to 150° F. Color is gray.

Stainless steel rollers provide excellent corrosion resistance for washdown applications. Rollers have plastic-encased stainless steel bearings. Temp. range is 30° to 150° F.

Steel Rollers with 7/16″ Hex Axles

General Purpose—Rollers are made of 16-ga. steel with a galvanized finish and have zinc-plated steel ball bearings.

Heavy Duty—These durable rollers are made of 12-ga. steel and have heavy duty zinc-plated steel ball bearings.

Quiet-Roll—Rollers have quiet-running, maintenance-free precision steel ball bearings with a static-control plastic housing. Rollers are made of 16-ga. steel with a galvanized finish. Temp. range is –20° to 165°F.

Quiet-Roll with Tapered Axle—Tapered axles fit securely in worn axle holes. Rollers have quiet-running, maintenance-free precision steel ball bearings with a static-control plastic housing. Rollers are made of 16-ga. steel with a galvanized finish. Temp. range is –4° to 212°F.

Washdown—Stainless steel rollers and axles offer excellent corrosion resistance. Rollers have stainless steel ball bearings in a plastic housing. Temperature range is 10° to 150°F.

PVC, Polyethylene-Covered, and Polyurethane-Covered Rollers with 7/16″ Hex Axles

Corrosion-Resistant PVC—Choose these nonmarring rollers for light duty applications. Rollers are made of 0.11″ thick PVC and have plastic-encased steel ball bearings. Temp. range is 14° to 176°F. Color is gray.

Nonstick Polyethylene Covered—Rollers are made of 16-ga. steel with a nonremovable cover. Rollers have quiet-running, maintenance-free precision steel ball bearings in a plastic housing. Temperature range is 10° to 150°F. Color is white.

Abrasion-Resistant Polyurethane Covered—The nonremovable polyurethane cover gives these steel rollers extra abrasion resistance. Rollers are made of 16-ga. steel and have quiet-running, maintenance-free precision steel ball bearings in a plastic housing. Temp. range is 10° to 150°F. Color is black.

Tapered Rollers for Curved Conveyors

Keep packages on track in curved sections of 1.9″ dia. roller conveyors. Rollers taper from approximately 2½″ diameter on the outside to 1⅝″ on the inside end so packages maintain their orientation through the curve. Rollers are made of 14-ga. steel with a galvanized finish. They have 7/16″ hex spring-loaded axles and steel ball bearings.

Grooved Rollers for Belt-Driven Conveyors

Single Groove

Double Groove

Tapered Triple Groove

Roller Conveyor Profile

Rollers have grooves to accommodate 3/16″ diameter belts in line-shaft conveyors. (See page 1049 for urethane belts.) All rollers have 7/16″ hex spring-loaded axles and steel ball bearings. Rollers are steel with a galvanized finish.

Single-groove and ***double-groove*** rollers are 1.9″ diameter and made of 16-ga. steel. *Double-groove* rollers can also be used with powered conveyor rollers.

Tapered triple-groove rollers improve package tracking in curved sections of 1.9″ dia. roller conveyors. Rollers taper from approximately 2½″ diameter on the outside to 1⅝″ on the inside end. Rollers are made of 14-ga. steel.

▲Made of 0.15″ thick steel. ●Roller is plain steel.

Powered 1.9″ Diameter Conveyor Rollers

24V DC

120V AC and 230V AC

Roller Conveyor Profile

Also known as drive rollers, these rollers connect to other double-groove rollers with 3/16″ diameter belts to power gravity conveyors. (See page 1049 for urethane belts.) All rollers have 7/16″ hex spring-loaded axles and quiet-running precision steel ball bearings that are shielded to keep out dirt and debris.

24-volt DC rollers drive up to nine rollers and have a continuous duty cycle with up to 30 starts and stops per minute. They are made of 16-ga. steel with a galvanized finish. All have a brushless motor and an integrated current-limiting circuit that protects the motor. Temperature range is 32° to 104°F.

120-volt AC and ***230-volt AC*** rollers drive up to five rollers and have a duty cycle of three seconds on, two seconds off. They are made of 1/16″ thick steel with a zinc-plated finish and include a terminal mounting bracket. Temp. range is 14° to 104°F. *120-volt AC* rollers have a single-phase motor. *230-volt AC* rollers have a three-phase motor.

To Order: Please specify voltage and speed.

Large Diameter Conveyor Rollers

Roller Conveyor Profile

Keep things moving with roller diameters beyond the typical 1.9″.

Aluminum rollers are lightweight and corrosion resistant. They have spring-loaded axles and steel ball bearings.

Steel rollers are stronger than aluminum. They have steel ball bearings and spring-loaded axles, except 3½″ diameter rollers, which include cotter pins to attach axles to the conveyor frame. 2 9/16″ and 3½″ diameter rollers have sealed bearings to keep out dirt and moisture for longer life.

Stainless steel rollers offer excellent corrosion resistance. They have spring-loaded axles and sealed stainless steel ball bearings to keep out dirt and moisture for longer life.

Powered Large Diameter Conveyor Rollers

Add power to your 2½″ diameter roller gravity conveyor or create a custom powered conveyor. Rollers are made of 3/32″ thick steel with a nickel-plated finish. They have 11/16″ hex spring-loaded axles and quiet-running precision steel ball bearings. Rollers can be hardwired to operate in either direction. Duty cycle is 70% for a 40-minute period. Temperature range is 14° to 130° F. *120-volt AC* motors are single phase. *220-volt AC* motors are three phase.

To Order: Please specify voltage and speed.

Rollers for Chain-Driven Conveyors

Roller Conveyor Profile

Replace worn rollers on chain-driven conveyors. Rollers are made of steel and have spring-loaded axles. Each roller has two welded sprockets for connecting to ANSI No. 40 roller chain. Sprockets are spaced 1⅛″ center to center; clearance between the end of the roller bearing and the first sprocket is 11/16″. For replacement chain, see page 1032.

Roller Dia.	For Between Frame Wd.	Hex Axle Size	Cap., lbs.	Number of Teeth per Sprocket

Quick-Change Bearings for Conveyor Rollers

Bearings thread into the included sleeve for easy replacement. Sleeves press fit into 16-ga. tubing. Use the wrench (sold separately) to install and remove bearings. Bearings are green polypropylene and have precision steel balls. Sleeves are black polypropylene. Hex axle is polyurethane with a steel core. Temp. range is –10° to 140° F.

Bearing and Sleeve

	Cap., lbs.		
Bearing and Sleeve for 7/16″ Hex Axle	360	4962T12	$8.43
Bearing with 7/16″ Hex Axle and Sleeve	375	4962T11	18.57

Replacement Bearing with 7/16″ Hex Axle	375	4962T16	15.00
Installation Wrench		4962T13	6.00

Bearings for Conveyor Rollers

Press fit bearings into tubing or pipe to replace worn or damaged bearings or make your own rollers. For galvanized pipe, see pg. 61. For stainless steel pipe, see pgs. 6-7. For PVC pipe, see pgs. 81-83.

Precision ball bearings have quiet, maintenance-free balls that are shielded to keep out contaminants for longer life.

Zinc-Plated Steel—Temperature range is –10° to 225° F. Bearings have steel balls.

Acetal—Temperature range is –40° to 180° F. *Sleeve bearings* ride directly on the axle and have no moving parts to wear out. *Ball bearings with hex axle* have stainless steel balls.

Polypropylene—Temp range is –10° to 140° F. Bearings have stainless steel balls, except *precision ball bearings*, which have steel balls.

Stainless Steel—Temp. range is –10° to 300° F. Bearings have stainless steel balls and offer excellent corrosion resistance.

Nylon—Temp. range is –20° to 210° F. Bearings have steel balls.

Shaft-Mount Conveyor Rollers

Two Rollers Shown with Shaft

Slip these rollers onto a shaft (not included) for a better grip at high speeds and on lightweight products such as paper. Rollers are made of polyurethane, which is nonmarking and resists abrasion. Temp. range is –40° to 170°F. Color is yellow for 30A durometer, blue for 60A durometer, and red for 90A durometer. A higher durometer means increased hardness, less compression, and less friction.

To Order: Please specify durometer.

For Shaft OD	OD	Wd.	Available Durometers		
1/2″	1″	1/2″	30A, 60A, 90A	60185K911	$3.91

Conveyor Roller Brackets

Surface-Mount Bracket

Frame-Repair Bracket

Surface-mount brackets let you create custom conveyors, support stands, or package stops. Brackets are steel with a galvanized finish and have a 13/32″ Wd. × 1″ Lg. mounting slot (fasteners not included). *Note:* Two brackets are required for each roller.

Frame-repair bracket mounts to your conveyor frame to recondition a worn hex axle hole or to convert a round axle hole to a hex axle hole. Bracket is polypropylene and includes fasteners for mounting to your axle and frame.

For Axle Size	(A)		
Surface-Mount Brackets			
1/4″ Round	1 29/32″	4960T11	$6.13

Frame-Repair Brackets			
7/16″ Hex	1 3/8″	4960T14	8.00

Cut-to-Width Conveyor Roller Covers

Reduce noise, absorb impact and shock, and extend the life of your rollers with these nonmarking covers. ***Polyurethane*** has a high-friction surface for high speeds and inclines. ***PVC*** is for use in corrosive environments. ***Slide-on covers*** are 1/8″ thick. For easier installation, use lubricant and an air nozzle (sold separately). Lubricant is water based and loses its lubrication properties upon drying to ensure covers retain a snug fit. Air nozzles deliver a cushion of air that makes it easier to slide the cover onto a roller. Air inlet is 1/4″ NPT female.

Heat-shrink covers are 0.05″ thick and conform to the shape of your roller when heated. Minimum shrink temperature is 300°F. *White PVC* covers are FDA compliant. *2 1/2″ tapered* cover fits rollers that taper from 2 1/2″ to 1 1/2″ dia.

Slide-On Covers—5-ft. Widths

Skate Wheels

Steel wheels are stronger than aluminum and have steel ball bearings. *Heavy duty* wheels have higher capacities and a zinc-plated finish for some corrosion resistance. *Heavy duty wheel with offset hub* has extra clearance on one side of the wheel.

Aluminum wheels are lightweight and corrosion resistant. *1 15/16″ dia.* wheels have aluminum ball bearings. *2″ dia.* wheels have steel ball bearings.

Rubber on steel wheel consists of 1/16″ thick rubber on a steel core with steel ball bearings. Rubber has a durometer of 50D.

Polyurethane on steel wheels consist of 5/32″ thick polyurethane on a steel core and with steel ball bearings. *Orange* polyurethane has a durometer of 75A. *Yellow* polyurethane has a durometer of 85A.

Nylon wheels are nonmarking, corrosion resistant, and quieter than metal. *Style 3* has a nylon hub with an abrasion-resistant acetal wheel and steel ball bearings. *Style 4* has a plain bore (no bearings).

ABS wheels are nonmarking and quieter than metal. They resist corrosion and acids. *Styles 4* and *5* have a plain bore (no bearings). *Style 5* has a 2 3/4″ Dia. × 1/2″ Wd. flange on one side. *Style 6* has acetal roller bearings.

Glass-filled nylon wheel is stronger than nylon and is a good choice for washdowns and harsh environments. Wheel has steel ball bearings.

Polycarbonate wheels have high capacities and good impact resistance. *125-* and *320-lb. cap.* wheels have steel ball bearings. *225-* and *580-lb. cap.* wheels have a plain bore (no bearings).

Multidirectional acetal wheels have rollers that rotate around the wheel core to allow movement of material in any direction. Wheels have a plain bore (no bearings).

About Ball Transfers

Ball transfers provide unlimited change of direction and easy movement of loads. Use transfers with the ball up in diverter tables, conveyor lines, and transfer tables. Several transfers can also be used ball down as casters or at an angle to form stock stands for pipe and tubing.

Steel transfers are durable. ***Nylon*** transfers are nonmarking. ***Stainless steel*** transfers offer the most corrosion resistance.

Stud-Mount Ball Transfers

Transfers can be used ball up, ball down, or at an angle, unless noted. Temperature range for nylon balls and housings is 32° to 212° F.

♦ Not for use in angled applications. ● Not for use in ball-down or angled applications.

Miniature Stud-Mount Ball Transfers

Move small parts in measuring and automation applications. Mount transfers with the ball up. Ball is stainless steel and housing is aluminum.

Ball Dia.	Cap., lbs.	(A)	(B)	Thread Size	Stud Lg.		
3/16″	20	1/4″	5/16″	M2	3/32″	2440T31	$43.53
1/4″	35	13/32″	1/2″	M3	1/4″	2440T32	57.16
5/16″	55	1/2″	19/32″	M4	5/16″	2440T33	58.68

Pop-Up Ball Transfers and Pads

Ball transfer and pad rise when you supply air and retract into the housing when air supply ceases. Place units in workstations or between conveyor rollers to move or hold material. Housing is galvanized steel with a brass barbed fitting on the bottom for 1/16″ ID tubing. Both operate on 50 psi.

Ball transfer lets you move and divert material without lifting. Ball is steel.

Pad has a polyurethane surface that, when raised, holds a load in place. Temp. range is 32° to 100° F.

Ball Transfer

Pad

	Cap., lbs.		
Ball Transfer	15	57855K4	$31.17
Pad	30	57855K8	36.28

Press-Fit Wheels

Create a low-profile conveying surface. Wheels have a black nylon housing. Temperature range is –50° to 120° F.

Nylon wheel is black and has an acetal sleeve-style bearing.

Steel wheel is zinc plated and has a precision ball bearing.

Wheel Material	Cap., lbs.	Wheel Dia.	For Hole Size		
Nylon	50	1 3/16″	1 3/4″ Sq.	2303T11	$10.64
Steel	400	1 5/16″	1 3/4″ Sq.	2303T32	17.42

Nonmarring Cushion Ball Transfers

A large-diameter ball handles delicate and polished surfaces. Covers on the bearing and mounting stud keep out dust and debris. Stud is steel with M14 threads and has zinc-plated steel locknuts. Temp. range is –4° to 140° F.

Rubber balls are black. ***Polyurethane*** balls are red.

Ball Dia.	Cap., lbs.	Ht.	*Rubber*		*Polyurethane*	
1 3/8″	30	1 13/16″	2411T111	$16.48	2411T211	$33.37
1 31/32″	40	2 17/32″	2411T121	21.28	2411T221	39.67

For information about ball transfers, see page 1247.

Flange-Mount Ball Transfers

Transfers can be used ball up, ball down, or at an angle, unless noted. Temp. range for nylon and acetal balls and housings is 32° to 195°F.

Screw Conveyor Components

Add on to your existing screw conveyor or keep it running like new. Components are made of steel unless noted.

Screws are designed for right-hand operation. Screws with a greater edge thickness offer longer service life for abrasive materials.

Trough covers include 10 clamps and a rubber seal.

Discharge spouts can be welded to a cutout in the trough.

Coupling shafts connect two screws together. ***End shafts*** support the end conveyor section. ***Bolts*** connect shafts to the screw.

End-shaft seals prevent material contamination and discharge.

End-shaft bearings support the end of the shaft and help the screw rotate.

Bearing hangers mount inside the trough (bearing sold separately). ***Hardwood*** bearings are oil impregnated and are commonly used in agricultural applications. ***UHMW*** bearings are FDA and USDA compliant and work well with chemicals and wet environments. ***Iron*** bearings are oil impregnated and offer longer life for abrasive materials. ***Bronze*** bearings are oil impregnated and handle temperatures up to 850° F.

Also Available: Stainless steel components. Please ask for 5866K88 and specify screw and shaft diameters and components desired.

Conveyor Belting

Food-grade belting is FDA compliant for food handling when used with stainless steel lacing.

Belting ***for slider-bed conveyors*** has a low-friction surface on the bottom that smoothly glides along the bed of the conveyor. Belting ***for roller-bed conveyors*** has a tough cover on the bottom to grip rollers.

Also Available: Belts with lacing installed and "endless" belts (continuous loops without lacing). We can also customize your belt with cleats, pegs, and punched holes. When ordering, please specify the part number of the belting you need and how you want it customized.

Smooth Belting for Flat Conveyors

Standard

General purpose PVC resists impact and tears. Belting is one ply with a cover on the top. Maximum temperature is 180° F.

Cut-resistant PVC is two ply for extra strength. Belting has a cover on the top. Maximum temperature is 158° F.

Slip-top nylon is good for accumulation applications where products need to remain in a fixed position while the belt is moving. Belting is four ply with a hard cover on the top. Maximum temperature is 250° F.

Oil-resistant neoprene not only has superior resistance to oils but also resists shrinking. It has a low-friction surface on the top. Maximum temperature is 250° F. *0.06″ thick* is three ply. *0.16″ thick* is five ply.

Food-grade general purpose nitrile, also known as Hycar and Buna-N, is the most popular food-grade belting. It resists animal fats and oils. Belting is two ply with a cover on the top. Max. temp. is 250° F.

Food-grade oil-resistant vinyl-nitrile is nonstaining and resists fats and grease. Impervious to hot water. Belting is two ply with a glossy cover on the top. Maximum temperature is 180° F.

Food-grade abrasion-resistant urethane is more durable than nitrile. It's nonstaining and nonsticking. Belting is two ply with a glossy cover on the top. Maximum temperature is 180° F.

Heavy duty abrasion-resistant SBR (styrene butadiene rubber) is excellent for abrasive and high-impact applications including conveying stone, sand, and glass particles. Belting is two ply with a tough cover on the top. Maximum temperature is 200° F.

▲ Maximum belt tension in pounds per inch of width.

Textured Belting for Incline Conveyors

Rough Top

Food Grade Cleated

The surface keeps your material from slipping and rolling when traveling on inclines and declines. Maximum temperature is 250° F, except general purpose PVC belting, which has a maximum temperature of 158° F.

Rough-top belting has a deeply textured surface to grip packages and cartons. *Note:* The top surface of the belt ends should be removed (by skiving or grinding) before installing lacing. Recommended lacing is based on the thickness of the belt after removing the top surface. For Surface Removal Tool, see 6202T48 on page 1253.

General purpose PVC resists impact and tears. Belting is two ply with a cover on the top.

Extra-grip SBR (styrene butadiene rubber) has good impact resistance and an excellent grip. Belting has a cover on the top. *0.25″ thick* belting is two ply. *0.27″ thick* belting is three ply.

Oil-resistant neoprene has a good grip along with superior oil resistance. Belting is three ply with a cover on the top.

Abrasion-resistant nitrile has a hard textured surface that resists punctures and abrasion. Belting is three ply with a cover on the top.

Food-grade cleated has ⅛″ high cleats every inch. Also known as Hycar and Buna-N, it resists animal fats and oils. Belting is three ply with a cover on the top.

Bolt-On Cleats for Conveyor Belts

Convert any smooth conveyor belt into a belt for inclines. Cut cleats to the length you need with a utility knife.

Abrasion-Resistant EPDM— More durable than nitrile, EPDM also has better resistance to acids and weather. Cleats attach to belts with the included bolts and nuts. Maximum temperature is 300°F.

Food-Grade Oil-Resistant Nitrile— The smooth surface is easy to clean and won't harbor bacteria. Nitrile resists acids, abrasion, and weather. Cleats have integral threaded inserts for a secure connection and attach to belts with the included stainless steel screws and washers. Maximum temperature is 240°F. FDA compliant.

Bolt-On	0.25″ to 0.625″	1253

Hammer-On Alligator

Press-On Clipper

Staple-On Alligator

Bolt-On

Lacing creates a strong, reliable connection on belting ends that provides more convenient belt installation than "endless" (continuous-loop) belts.

Hammer-On Alligator— Lacing is low profile and requires no special tools for installation.

Press-On Clipper— A lacer clinches these low-profile hooks onto the belt for reduced installation time and consistent connections.

Staple-On Alligator— Staples secure the lacing plates to the conveyor belt for a strong, impact-resistant connection.

Bolt-On— The heaviest duty style we offer, lacing consists of plates compressed into the belt by bolts and nuts.

Hammer-On Alligator Lacing for Conveyor Belts

Since the only tool you'll need to install this lacing is a hammer, it's perfect for repairs and areas where lacing machines would be difficult to use. The low-profile, one-piece design runs smoothly over idler rollers without catching on conveyed products. Lacing can be cut to size with wire-cutting pliers. Each box includes lacing, connecting pins, and an installation gauge pin with clips.

Type 316 stainless steel lacing provides better corrosion resistance than galvanized steel and is nonmagnetic.

Also Available: Extra connecting pins and installation clips. For connecting pins, please ask for 6110K888 and specify lacing number and length. For clips, please ask for 6110K777 and specify lacing number.

Press-On Clipper Lacing for Conveyor Belts

Conveyor Belt Lacing

Standard

Unibar

Regular Point | Extra Short Point (XSP) | Short Point (SP) | Long Point (LP) | Long Leg (LL)

Clipper lacing is a low-profile connection that is installed with a lacer for reduced installation time and consistent connections (lacer sold separately). Lacing consists of hooks in a staggered pattern. Long leg (LL) hooks hold more belt fibers than regular hooks, which prevents the lacing from pulling out once installed.

Note: Two laces are required for each joint.

Stainless steel lacing provides better corrosion resistance than steel. Lacing is magnetic, unless noted.

Standard— Each hook is secured to a cardboard sheet. Use on flat and troughed conveyors.

Unibar— More durable and easier to install than standard lacing, each hook is welded to a metal bar. Use on flat conveyors.

♦ Works with all leg and point styles for a given series number. ♥ For lengths of 100 ft. or more, price is approximately 10% less.

Lacers

A

B

To lace belts wider than the working width, repeat the operation.

Style A lacers mount in your vise. ***Style B*** lacers are wider for more efficient installation.

Holding strips are required for Style B to load the lacing. **To Order:** Please specify lacing series number.

♣ Works with both Standard and Unibar lacing in all leg and point styles for a given series number.

For information about conveyor belt lacing, see page 1251.

Staple-On Alligator Lacing for Conveyor Belts

Lacing

Not only is this lacing strong and impact resistant, it's easier to install than bolt-on lacing. An installation tool (required; sold separately) guides staples as they are driven into place. Each box contains lacing and nylon-coated connecting pins for four connections.

Stainless steel lacing provides better corrosion resistance than steel and is nonmagnetic.

6″ Wide Installation Tool

Bolt-On Lacing for Heavy Duty Conveyor Belts

Commonly used in mining conveyors, this galvanized steel lacing repairs and extends thick, heavy belts. Laces include fasteners and a nylon-coated connecting pin for one connection.

Installation tools are required for proper installation. Punch holes in the belt using the *power punch bit*, then fasten bolts with the *power wrench bit*. *Quick-change adapter* lets you use the power bits with a 1/2″ impact wrench. ***Templates*** serve as guides when punching holes and cutting belt ends.

Also Available: Stainless steel lacing and power wrench bit for stainless steel fasteners. For lacing, please ask for 6143K888 and specify belt width. For power wrench bit, please ask for 6143K94.

Pulleys for Conveyor Belts

Replace worn and damaged pulleys or create new conveyors. Pulleys are steel and have a keyway with two set screws at each end, unless noted. For keyed shafts, see page 1082. Also known as crowned pulleys, 4″ to 8″ diameter pulleys have tapered ends to improve belt tracking.

To Order: Please specify bore size: 1/2″ bore with 1/8″×1/16″ keyway (unless noted), 5/8″ or 3/4″ bore with 3/16″×3/32″ keyway, or 1″ bore with 1/4″×1/8″ keyway.

Also Available: Pulleys with 1/4″ thick rubber coating (lagging). Please ask for 5706K888 and specify pulley diameter (without coating), pulley width, and bore size.

Also Available: Stainless steel pulleys. Please ask for 5706K777 and specify pulley diameter, pulley width, and bore size.

★ 1/2″ bore size has a single set screw at each end without keyway.

Maintenance Tools for Conveyor Belts

Belt cutting tools are portable so you can safely cut your conveyor belts right on your job site.

Surface removal tool, also known as a skiver, removes the rough top surface of your conveyor belt for secure lacing connections.

	For Max. Belt Wd.	Thick.		
Belt Cutting Tool	14″	3/8″	6141K11	$611.13

Belt Cutting Tool for 14″ Max. Belt Wd.

Belt Cutting Tool for 36″ Max. Belt Wd.

Surface Removal Tool

Conveyor Belt Tensioners and Bearings

Tensioner and Bearing

Extend or retract your conveyor belt pulley to adjust the tension on the belt. Tensioners mount to the sides of the conveyor and attach to bearings (sold separately) that hold the pulley shaft. *Note:* Two tensioners and two bearings are required.

Tensioners are steel with a gray painted finish and have a cadmium-plated steel adjustment rod and nut. Mounting hole diameter is 9/16″ (fasteners not included).

Bearings are cast iron and have a locking collar with two set screws. Temperature range is –20° to 200° F.

Also Available: Stainless steel tensioners and stainless steel bearings with a plastic housing. For tensioners, please ask for 6029K888 and specify maximum adjustment: 3″, 6″, 9″, or 12″. For bearings, please ask for 6029K777 and specify shaft diameter: 5/8″, 3/4″, 7/8″, or 1″.

Conveyor Belt Tensioners with Protected Adjusting Screw

Side View

End View

Prevent debris buildup, corrosion, and thread damage—these tensioners have a totally enclosed adjusting screw. Tensioners mount to the sides of the conveyor and attach to base-mount bearings (not included; see pages 1153-1163) that hold the pulley shaft. *Note:* Two tensioners and two bearings are required.

Stainless steel tensioners are for use in washdown and corrosive environments.

Sprocket-Driven Conveyor Belts

Straight-Running Belt

Side-Flex Belt Series 880 and 882

Side-Flex Belt Series 1701

Wear Strip

An excellent choice for food handling, packaging, and bottling, belts consist of links connected by stainless steel pins. Also known as conveyor chain. Links are FDA-compliant brown acetal and temperature range is –40° to 194° F, unless otherwise stated.

Straight-running belts have overlapping links so there are no gaps. *High-temperature* belts are made of stainless steel, which is nonmagnetic and corrosion resistant. Temperature range is –94° to 806° F.

Side-flex belts have tabs on the bottom that keep the belt from lifting off the track when traveling through curved sections of conveyor.

Wear strips attach to conveyor frames up to 1/8″ thick to reduce friction and abrasion on your belt. Made of white UHMW polyethylene.

Also Available: Acetal rivets to attach wear strips to your frame. Please ask for 6369K888 and specify 3/4″, 1″, or 1 1/2″ rivet length.

★ One-piece construction.

Overhead Enclosed-Track Conveyor Components

The enclosed track protects trolleys and chain from contamination and damage. Components fit track with an inside width of 2½″.

Track

Straight

90° Horizontal Curve

Steel track provides the runway for trolleys, carriers, and chain in manual and powered systems. Install at least one hanger bracket (sold separately) every 5 feet. Track has a blue painted finish.

Straight—10 ft. Length	5927K11	$139.29
90° Horizontal Curve—2 ft. Radius	5927K12	168.75
90° Horizontal Curve—3 ft. Radius	5927K13	192.86
90° Horizontal Curve—4 ft. Radius	5927K14	241.07

Brackets

Brackets are steel and have a ½″ dia. hole in the top for hanging from threaded rod.

Hanger bracket holds track in place with nuts (not included) on threaded rod.

Joint bracket connects two sections of track when tightened with the included bolts.

Hanger Bracket

Joint Bracket

	Ht.		
Hanger Bracket	4½″	5927K19	$18.00
Joint Bracket	4 7/16″	5927K18	112.42

Trolleys for Manual Conveyors

Sturdy cast iron construction and ball bearing wheels provide smooth operation. Wheels and ball bearings are steel. Distance from the bottom of the track to the center of (A) is 1½″.

Ht.	Wd.	(A)	Cap., lbs.		
4 9/16″	6″	17/32″	250	5927K42	$56.25

Carriers and Chain for Powered Conveyors

Carrier Shown Open

Carrier Shown Closed

Chain

Carrier attaches loads to the chain with a scissor-like action and pivot as the conveyor makes elevation changes. Maximum incline is 45°. Use where swinging loads are permitted.

Chain is a series of smooth-rolling, alternating vertical and horizontal wheels that carry loads along the track. Steel pins connect the wheels and detach for quick installation and replacement. Vertical wheel axles spaced every 8″ serve as attachment points for carriers. *Note:* Capacity listed is per attachment point.

	Cap., lbs.		
Carrier—4¼″ Ht. × 1″ Wd.	125	5927K27	$3.12
Chain—20 ft. Lg.	125	5927K34	602.68

Overhead I-Beam Conveyor Components

I-beam conveyors are built to handle heavier loads than enclosed-track conveyors and are easy to install and expand.

Track

I-beam track provides the runway for trolleys in manual and powered systems. Made of steel with a gray primer finish. *Note:* Not designed for building structural support.

Track Ht.	Flange Wd.	Track Thick.	Lg., ft.	Weight, lbs./ft.		
3″	2.33″	0.17″	10	5.7	5920K2	$157.95
4″	2.66″	0.19″	10	7.7	5920K3	169.00

Trolleys for Manual Conveyors

Prevent excess wear on your track and trolley—only the wheels of these hand-push trolleys come in contact with the I-beam. Trolleys can be taken apart for installation anywhere along the I-beam. Wheels and ball bearings are steel; brackets are cast iron.

Tight-Seal Strip Brushes

0.006″ Dia. Bristles (Actual Size)

0.014″ Dia. Bristles (Actual Size)

0.045″ Dia. Bristles (Actual Size)

Brushes have dense bristles that can dust, stop, and separate items on a conveyor. They also keep heat, sprayed liquids, and chips contained. Bristles are held in place by a continuous metal backing and a binding wire. Brushes can be cut to size with wire-cutting pliers (see page 2753). The larger the bristle diameter, the stiffer the bristles. For strip brush holders, see page 1257.

General Purpose Nylon Bristles—Bristles are abrasion resistant. Color is black. Maximum temperature is 225°F.

Static-Control Nylon Bristles—Nylon dissipates static to keep it from building up. Color is black. Maximum temperature is 200°F.

Detectable Nylon Bristles—Bristles contain a compound that metal detectors and x-ray equipment can detect. Color is gray. Maximum temperature is 200°F.

Food-Grade Polyester—Made of FDA-compliant polyester, brushes are good for food and beverage conveying. Color is white. Maximum temperature is 200°F.

High-Temperature PTFE Bristles—Choose these brushes for high-temperature and nonstick applications. Color is off-white. Maximum temperature is 500°F.

Ultra-Soft Horsehair Bristles—Excellent for picking up dust and fine powders in finishing and cleaning applications. Color is brown. Maximum temperature is 300°F.

Soft Brass Bristles—Bristles won't scratch other metals. Brass is conductive to prevent static buildup. Maximum temperature is 500°F.

Corrosion-Resistant Stainless Steel Bristles—Use for corrosive and high-temperature environments. Stiffer than brass. Maximum temperature is 800°F.

Steel backing has a galvanized finish. *Stainless steel backing* resists corrosion.

To Order: Please specify length in 1-ft. increments. Maximum continuous length is 8 ft. except for brushes with PTFE bristles, which have a maximum continuous length of 6 ft.

Tight-Seal Strip Brush Holders

Slide a strip brush into one of these holders and position it on your conveyor. Use with the Tight-Seal Strip Brushes shown on the previous page. Holders have a channel for one strip brush, except *Style 2*, which holds two brushes. Cut holders to size with a hacksaw. They can be drilled for mounting, except *Style 8,* which has a top channel that grips onto surfaces up to 1/16″ thick.

Direct-Mount Strip Brushes

Brushes have bristles stapled into a PVC backing. The backing can be drilled for mounting, except *Style 11*, which has a top channel that grips onto surfaces up to 1/16″ thick. Use brushes to clean conveyor belts as well as to contain dust, sprayed liquids, heat, and chips. Bristles are black. The larger the bristle diameter, the stiffer the bristles.

Flexible backing can be cut to size with a utility knife. *Rigid backing* can be cut to size with a hacksaw.

General Purpose Nylon Bristles— Bristles are abrasion resistant. Maximum temperature is 150° F.

Ultra-Soft Horsehair Bristles— Excellent for picking up dust and fine powders in finishing and cleaning applications. Maximum temperature is 300° F.

Cylindrical Conveyor Brushes

With polypropylene bristles in a tight spiral pattern, these brushes are effective for cleaning conveyor belts and chain. Bristles are black. The larger the bristle diameter, the stiffer the bristles.

Bristles are mounted on a steel tube and include set screws for securing to a 1″ diameter shaft (shaft not included). Maximum temperature is 200° F.

Adjustable Conveyor Brushes

Adjust the angle to fit 11″ to 29″ wide conveyors using the mounting kit (sold separately). Use brushes for light cleaning and product positioning. The larger the bristle diameter, the stiffer the bristles. Max. temp. is 225° F.

Mounting kit includes a 1/2″ Dia.×36″ Lg. shaft, mounting brackets, and hardware.

Bristle Dia.	Color	3 1/2″ Brush Dia.		4″ Brush Dia.		6″ Brush Dia.

Brush and Mounting Kit

Adjust-a-Rail Conveyor Guide Rails

Mounting Rods and Accessories

Use rods with mounting rod brackets, connectors, and clamps to support and position guide rails and accessories. All rods are 1/2″ diameter and made of stainless steel.

(1) Mounting rods have black plastic end caps.

(2&3) Threaded mounting rods accept a 5/16″-18 bolt. *(3) Pivoting threaded mounting rods* make angle-mounting easy.

(4) Mounting rod with clamp includes a plastic clamp with two bolts for a tight grip on your guide rail.

(5) T-style mounting rod includes a plastic bracket for mounting to your conveyor. Mounting holes are 1/4″ dia. (fasteners not included).

(6) Rod with accessory/sensor holder has a plastic holder with a 1/4″ dia. hole for attachments.

(7&8) End caps cover mounting rod ends.

1	6″ Lg. Mounting Rod	**9268K71**	$9.05
1	9″ Lg. Mounting Rod	**9268K72**	11.18
1	12″ Lg. Mounting Rod	**9268K73**	17.64
2	3″ Lg. Threaded Mounting Rod	**9268K74**	14.71

7	Yellow Plastic End Cap	**9268K148**	.49
8	Black Rubber End Cap	**5896T5**	7.33

Mounting Rod Connectors

All connectors fit 1/2″ diameter rods.

(9&10) Connectors have plastic knobs for easy adjustment.

(12) Connector rotates for mounting versatility.

9	90° Angle—Plastic	**9268K85**	$18.72
10	90° Angle—Stainless Steel	**9268K23**	43.08
11	90° Angle—Stainless Steel	**9268K146**	9.75
12	Adjustable Angle—Stainless Steel	**9268K145**	14.57

Mounting Rod Brackets

Brackets accommodate 1/2″ diameter rods. Mounting slots are 0.41″ wide (fasteners not included). *Plastic brackets* and *spacer* are black. Brackets *with swivel head* offer added versatility for angled mounting.

(14-16) Brackets have a plastic knob for easy adjustment.

(19) Bracket spacer increases the distance between the bracket and the conveyor frame. Multiple spacers can be used. Spacer is not for use with Style 16.

13	Plastic Bracket for Threaded Vertical Rod	**9268K22**	$11.47
14	Plastic Bracket for Horizontal Rod	**9268K37**	23.37
15	Plastic Bracket w/ Swivel Head for Horizontal Rod	**9268K38**	24.25

18	Stain. Steel Bracket w/ Swivel Head for Horiz. Rod	**9268K27**	33.74
19	Plastic Bracket Spacer	**9268K39**	5.53

(Continued on following page)

Adjust-a-Rail Conveyor Guide Rails *(Continued from previous page)*

Mounting Bars and Brackets

Mounting bars and brackets support clamps to position guide rails and sensors. Bars and brackets are made of stainless steel, except Style 22, which is black plastic. Mounting fasteners not included, except for Style 20.

(22&23) Mounting brackets are in two pieces that can be offset for extra clearance between the conveyor and the guide rail or sensor.

(24) Bars for sensors mount with *Style 28* clamp to position sensors and reflectors.

20	4½″ Ht. Mounting Bar	9268K87	$11.53
20	7½″ Ht. Mounting Bar	9268K88	13.21
21	8″ Ht. Mounting Bar	9268K143	16.06
22	11¾″ Ht. Mounting Bracket	9268K32	22.25
23	⅛″ Thick., 10⅝″ Ht. Mounting Bracket	9268K34	23.60

23	¼″ Thick., 10⅝″ Ht. Mounting Bracket	9268K152	37.51
24	5″ Ht. Bar for 12 mm Sensors	9268K83	14.18
24	5″ Ht. Bar for 18 mm Sensors	9268K84	14.18

Rail Clamps and Connectors

Components are made of stainless steel, unless otherwise stated.

(25-27) Rail clamps are used with threaded mounting rods or mounting brackets to hold guide rails in place. *Styles 25 and 27* include hardware for mounting. *Style 26* has a 5/16″ dia. mounting hole (fasteners not included).

(28) Rail clamp for mounting rods and bars connects a guide rail to a mounting rod, mounting bar, or sensor bar. Made of black plastic.

(29&30) Rail connectors join two guide rails. *Style 29* taps on with a hammer. *Style 30* includes bolts and nuts for a stronger connection.

25	Rail Clamp	9268K51	$2.75
26	Offset-Rail Clamp	9268K135	2.19
27	Double-Rail Clamp	9268K55	6.58
28	Rail Clamp for Mounting Rods and Bars	9268K53	$7.33
29	Rail Connector	9268K24	2.56
30	Heavy Duty Rail Connector	9268K136	12.37

Guide Rails, Brushes, and Roller Rails

(31-36) Guide rails have UHMW polyethylene wear strips and are USDA compliant. *Styles 31-34* have stainless steel channels. *Styles 35-36* have a white low-friction wear strip and a stainless steel core.

(37) Flexible brushes have a PVC backing and white nylon bristles.

(38&39) Roller rails keep things moving where items tend to jam. Rails have gray acetal rollers and include 5/16″-18 bolts for mounting. *Style 38* has an aluminum channel. *Style 39* has a PVC channel.

Build-Your-Own Guide Rail

Choose a channel and a wear strip or brush to create your own rail.

(40&41) Channels are aluminum and attach to mounting bars and brackets with a 5/16″-18 bolt and hex nut (not included).

(42&43) Wear strips are made of FDA-compliant white UHMW polyethylene.

(44) Brushes have a PVC channel and white nylon bristles.

Material Support Stands

Feed materials into drill presses, band saws, and other equipment with less lifting. Frames are steel.

(A) Stand has folding legs with nonskid rubber end caps. Roller is 2″ dia. and made of zinc-plated steel.

(B) Feet have flanges with a 3/8″ dia. hole for mounting. Roller is 2″ dia. and made of steel.

(C) Four legs with adjustable leveling feet provide stability. Roller is 1.9″ dia. and made of galvanized steel.

(D&E) Stands have multiple 1 3/8″ dia. galvanized steel rollers. Roller spacing is 4″. Legs have adjustable leveling feet. *Style D* is 18″ Lg.×15″ Wd. *Style E* is 66″ Lg.×15″ Wd. and has folding legs.

(F) The top rail is 18″ wide and has 1″ dia. steel ball transfers; ball spacing is 2″. Feet have flanges with a 3/8″ dia. hole for mounting.

	Between Frame Wd.	Cap., lbs.	Height		
A	16 5/8″	250	27 1/2″ to 43 1/2″	**5771K51**	$41.47

V-Style Material Support Stands

Shown with Optional V Wheels and Casters

Support pipe and bar stock while cutting and welding. Stands and accessories are steel.

(G) Stands have two 1″ dia. ball transfers to feed and rotate material. Ball transfers for 5006T66 adjust to three positions along each arm. Legs have nonskid rubber end caps.

(H) Two 2″ dia. rollers provide smooth material feed. Feet have flanges with 3/8″ dia. holes for mounting.

(J) Each arm is flat and 12″ long. Legs have adjustable leveling feet. *Optional V wheels* mount into the arms to make rotating material easier. Wheels are 4″ dia. *Optional casters* have 8″ dia. rubber-tread wheels with a brake.

	For Pipe OD	Cap., lbs.	Height		
G	Up to 3″	150	24″ to 40″	**5006T65**	$90.26

Optional Casters for Style J (Set of 5)				**5006T84**	264.86

Adjustable Pipe Support Stands

Table-Top Stands

Stand sits on your work surface and allows you to position pipe perpendicular or parallel to the frame. Frame is steel with four 4 1/2″ dia. steel wheels and 1 1/2″ dia. axles. Wheels adjust to fit 3″ to 30″ OD pipe. Capacity is 2,500 lbs. Overall size is 17 1/2″ Lg.×6 1/2″ Wd.×6 1/4″ Ht.

2683T15 ..... **Each** $101.40

Build-Your-Own Stands

Table-Top Frame with Ball Transfer Supports

Combine a frame and a pair of supports to create a table-top or floor stand. Position the supports along the top of the frame to fit 1/2″ to 36″ OD pipe.

Frames— Made of steel. *Table-top* frame is 22″ Lg.×6″ Wd. and has four flanges with 1/2″ dia. holes for mounting to your work surface.

Supports— *Ball transfers* are 1 1/2″ dia. *Wheels* are 4″ dia. Stainless steel wheels are more corrosion resistant than steel wheels.

Fixed Ht. Frame with Steel Wheel Supports

	Cap., lbs.		Each

Glass-Filled Nylon Frame Hand Trucks

With a frame made of black glass-filled nylon, these trucks are as strong as steel yet as lightweight as aluminum.

Both trucks have a steel handle and load plate. Stair glides on the back let you easily move your load up and down stairs and over curbs. Trucks roll on 10″ dia. wheels. Shipped assembled.

Pneumatic wheels are quiet and shock absorbing. ***Cushion rubber-tread wheels*** handle heavy loads and provide a cushioned ride.

Cap., lbs.	Load Plate, Wd. × Dp.	Handle Ht.		Each
Pneumatic Wheels				
600	14½″ × 7″	48″	24105T21	$70.43
Cushion Rubber-Tread Wheels				
600	14½″ × 7″	48″	24105T22	70.43

Steel Hand Truck with Wood Handles

Wood handles are more comfortable to hold in hot and cold environments, and they make these trucks quieter and more shock absorbing than all-metal trucks.

Frame is 11-ga. steel with a green powder-coated finish. Truck rolls on 10″ dia. rubber-tread wheels.

Cap., lbs.	Load Plate, Wd. × Dp.	Handle Ht.		Each
1,000	23″ × 6″	57″	2604T24	$443.60

Steel Hand Trucks

Trucks

All welded-steel construction offers you the most durable hand trucks around.

Cushion rubber-tread wheels will not go flat and provide a cushioned ride. ***Pneumatic wheels*** are quiet and shock absorbing. ***Rubber-tread wheels*** handle heavy loads and roll smoothly over rough surfaces. ***Steel wheels*** are ideal for heavy loads.

Heavy duty trucks are made of heavy gauge steel so they stand up to abuse and demanding applications. ***Trucks with stair glides*** make it easier to move loads up and down stairs and over curbs.

(C) Also known as shovel-nose trucks, these trucks have a tapered load plate.
(D) Reduce your tilting effort by 66%. A spring-loaded pedal allows the axle to shift farther from the load plate during tilting.
(E) Has two rear wheels for increased stability and better mobility. Has a tapered load plate.
(F) Type 304 stainless steel offers superior corrosion resistance in washdown and other harsh environments.

● Has stair glides.

Optional Fold-Down Load Plate Extension— Extension adds 18″ to the depth of the load plate. Capacity with extension in use is 200 lbs. Compatible with 2655T31, T32, T35, T38, and T51 hand trucks.

2655T81 ..... **Each** $27.58

Warning! Never exceed capacities.

Aluminum Hand Trucks

Straight Frame with Solid Load Plate and Optional Fold-Down Load Plate and Frame Extensions

Curved Frame with Open Load Plate and Optional Stair Glides and Accessory Bag

Trucks

All aluminum construction creates trucks that are much lighter in weight. Shipped assembled.

Curved-frame trucks provide better support when moving drums.

Cushion rubber-tread wheels will not go flat and provide a cushioned ride. ***Pneumatic wheels*** are quiet and shock absorbing.

Optional Stair Glides— Make moving up and down stairs and over curbs easy. Glides have reversible wear strips for twice the service life.

2611T65 ..... **Per Set** $38.56

Optional Fold-Down Load Plate Extensions— Fold down to increase the depth of the load plate to 30″. Capacity with extension is 300 lbs.

For Straight-Frame Trucks..... 2611T54 **Each** $53.74
For Curved-Frame Trucks..... 2611T53 **Each** $53.74

Optional Frame Extension— Increases handle height to 60″.

2611T62 ..... **Each** $22.44

Optional Accessory Bag— Attaches to the cross braces of the frame to conveniently hold essentials. Bag is 12″ Wd.×18″ Ht.×2″ Dp. Made of black nylon.

2611T37 ..... **Each** $31.72

Light Duty Fold-Up Hand Trucks

A

B

9940T52 Shown

Take them anywhere—these trucks fold up for easy transport and space-saving storage. All have a telescoping handle and a shock cord to secure your load. Shipped assembled.

Thermoplastic rubber (TPR) wheels roll over rough surfaces and are nonmarking and chemical resistant. ***Rubber-tread wheels*** are quiet and protect your floors. ***Never-go-flat wheels*** (also known as semi-pneumatic) are quiet and shock absorbing, and you won't have to worry about having a flat.

(A) Truck is made of zinc-plated steel.

(B) Handle and frame are made of steel. Load plate is chrome-plated steel wire. Stair glides on the back let you easily move up and down stairs and over curbs.

9940T52 provides increased stability and better mobility with two fold-down legs that have swivel casters with 3″ dia. solid rubber wheels.

Hand Trucks with Safety Straps

C

D

E

Also known as appliance trucks, these durable hand trucks secure your load with a 2″ wide web strap and a ratchet-style tightener. They also feature padded contact surfaces to protect your load and rotating rubber stair climbers on the back for easy moving up and down stairs and over curbs. Shipped assembled.

(C) Two-wheel aluminum truck is lighter than the steel trucks and has a cotton strap. Frame has a 2″ wide contact surface. The load plate has a red powder-coated finish. Side-mounted hand grips offer better control.

(D) Two-wheel steel truck has a nylon strap and an automatic strap recoil device that stores excess strap. Frame has a red powder-coated finish.

(E) Four-wheel steel trucks offer additional support with two fold-down legs that have swivel casters with 3½″ dia. thermoplastic rubber (TPR) wheels. All have a nylon strap and an automatic strap recoil device that stores excess strap. Frame has a red powder-coated finish.

Stair-Climbing Battery-Powered Hand Trucks

Let the truck do the work for you—motorized rotating rollers on the back of these trucks make moving heavy items on stairs easier. Rollers are 2″ dia. polyurethane and run on a ½-hp, 50-amp motor powered by a sealed, maintenance-free battery. A circuit breaker and a battery charger with a 5′10″ long cord with three-prong plug are included. A 2″ wide polyester strap with a ratchet-style tightener secures the load and an automatic recoil device stores excess strap. Trucks are made of magnesium and roll on two rubber-tread wheels. Shipped assembled.

Cap., lbs.	Load Plate, Wd.×Dp.	Handle Ht.	Wheel Dia.		Each
850	24″×4″	66″	6″	2849T1	$2,620.62
850	24″×4″	72″	6″	2849T2	2,655.54

Optional Load Plate Extension—Slips over the load plate to increase size to 28″ Wd.×12″ Dp. Made of steel.

2849T4 ..... **Each** $144.21

Multitask Hand/Platform/Dolly Trucks

A telescoping frame and folding handles let you easily convert from a hand truck to a one- or two-handled platform truck to a dolly in minutes. Trucks are steel with a textured black powder-coated finish. Stair glides let you easily move your load up and down stairs and over curbs.

In the hand truck position, trucks roll on two polyurethane wheels; in the platform truck and dolly positions they roll on the two polyurethane wheels and two swivel casters with thermoplastic rubber (TPR) wheels. Shipped assembled except for wheels and casters, which must be installed (hardware is included).

Cap., lbs.	Platform Size, Lg.×Wd.	Handle Ht.	Wheel Dia.		Each
500	28″ to 42½″×12½″	24″	8″/4″	2838T1	$155.45
500	34″ to 52″ ×13½″	32″	8″/5″	2838T2	186.78

Convertible Hand/Platform Trucks

Trucks

Removable handles let you convert the truck by moving the handle from the hand truck position to the platform truck position. ***Quick convert*** have a lever that releases the platform to fold down when needed and to lock against the frame when not in use. Shipped assembled.

Black Glass-Filled Nylon Frame Truck—Lightweight and an economical alternative to aluminum. The handle is steel with a black powder-coated finish. Stair glides on the back let you easily move your load up and down stairs and over curbs. As a platform truck, it rolls on two pneumatic wheels and two swivel casters with polypropylene wheels.

Steel Trucks—Have a red powder-coated finish. As a platform truck, they roll on two rubber wheels (unless noted) and two swivel casters with polypropylene wheels.

Aluminum Trucks—As a platform truck, they roll on two pneumatic wheels and two swivel casters with thermoplastic rubber (TPR) wheels. One caster has a side wheel brake.

Aluminum Battery-Powered Trucks—The same as the aluminum trucks above but have a drive motor to move heavy loads over long distances as well as up and down inclines. They have a handle-mounted variable speed control with forward and reverse functions. The drive can be disengaged for manual use. Trucks include a battery charger with 5′10″ long cord with three-prong plug.

♦ Has two pneumatic wheels and two swivel casters with polypropylene wheels.

Dual Battery Pack for 2389T72 ***and T73***—Ideal for high usage applications. Both batteries are enclosed in a case that plugs into the motor and keeps one battery charging while the other is in use.

2389T74 ..... **Each** $374.54

Aluminum Quick Convert

High-Stack Narrow Platform Trucks

Tall handles on each end let you stack higher than other trucks, and a narrow platform allows for maneuvering in tight spaces. The removable handles are steel with a powder-coated finish. Trucks have two rigid rubber-tread wheels in the center of the platform and two swivel casters with polyurethane wheels at each end of the platform. This design allows for tight turns and turning in place. Shipped assembled.

Plastic platform is steel reinforced and has a nonslip surface. Color is gray. ***Steel platform*** has a nonslip diamond pattern on the surface. Platform is gray; handles are orange.

Steel Platform Trucks

Rugged steel trucks offer a variety of capacities and wheel materials for handling light to heavy duty applications. All roll on two rigid and two swivel casters and are shipped assembled (unless noted). For Stainless Steel Platform Trucks, please see page 1266.

Rubber-tread wheels roll smoothly over rough surfaces. ***Polyurethane wheels*** are smooth rolling and nonmarking. ***Pneumatic wheels*** are quiet and shock absorbing. ***Thermoplastic rubber (TPR) wheels*** roll over rough surfaces and are nonmarking and chemical resistant.

Light Duty Trucks— Have a spring-loaded fold-down handle for convenient storage, protective bumpers, and a nonslip blue vinyl surface on the top of the platform. Trucks have a beige enamel finish.

Medium Duty Trucks— Have a removable handle and a gray powder-coated finish. *Lipped platforms* have a 1½″ high lip that prevents your load from slipping off.

Heavy Duty Trucks— Have a removable handle and are made of heavy gauge steel to withstand demanding applications.

Flush platforms and *flush platforms with floor lock* have a gray powder-coated finish on the platform and a blue powder-coated finish on the handle.

Flush platform quick turns have a gray powder-coated finish. Casters are mounted in a diamond pattern to allow for tighter turns and better maneuverability.

♦ Has thermoplastic rubber (TPR) wheels and is shipped unassembled. ★ Platform height is 7½″; wheel dia. is 5″. ● Swivel casters have a face wheel brake.

Warning! Never exceed capacities.

Wood Platform Trucks

Not only are trucks with a wood platform quieter, they grip your load and absorb impact better than trucks with a steel platform. All have a steel frame and removable handle. Trucks roll on two rigid and two swivel casters.

Rubber-tread wheels roll smoothly over rough surfaces. ***Polyurethane wheels*** are smooth rolling and nonmarking. ***Pneumatic wheels*** are quiet and shock absorbing.

(A) Frame and handle have a green powder-coated finish.

(B) Frame and handle have a gray painted finish. *Trucks with polyurethane wheels* have a side wheel brake on the swivel casters.

(C) A steel edge around the platform and steel reinforcing offer support, stability, and protection. Frame and handle have a blue painted finish.

(D) A steel edge around the platform and steel reinforcing offer support, stability, and protection. Frame and handle have a gray powder-coated finish.

Ergonomic Raised Platform Trucks

Be good to your back—the raised platform on these trucks provides a comfortable work height to reduce the amount of bending over while loading and unloading. Frame and removable handle are made of steel with a powder-coated finish. Trucks roll on two rigid and two swivel casters with rubber-tread wheels.

Swivel casters are available with and without a side wheel brake.

Steel platforms offer better strength and durability compared to wood and plastic. Color is red.

Wood platforms are impact absorbing and quieter than steel. Frame and handle are red.

Plastic platforms are lightweight and resist dents and corrosion. Color is red.

Plastic Platform Trucks

Plastic platforms resist corrosion and dents. Trucks have a removable handle and two rigid and two swivel casters (unless noted). Shipped assembled.

Steel-reinforced platforms offer added strength and durability.

(A) Has a nonremovable three-position handle that folds down flat so truck can be used as a dolly. Platform is black with a nonslip surface; handle is steel with a gray epoxy finish. Casters have thermoplastic rubber (TPR) wheels.

(B) Platform is black with a textured surface; handle is steel with a red powder-coated finish. Wheels are rubber, unless noted.

(C) Platform is gray with a nonslip surface and a protective front bumper; handle is zinc-plated steel. Casters have rubber-tread wheels.

(D) Have the same features as *Style C*, but have four swivel casters and two rigid casters in the center of the platform for easier turning and maneuverability.

(E) Offer a 3″ high lip on the platform that prevents your load from sliding off. The platform is blue and has drainage holes. Handle is steel with a black powder-coated finish and can be used in the handle pockets located at either end of the platform. Casters have thermoplastic rubber (TPR) wheels.

★ Wheels are polyolefin.

Add-On Side and End Panels for 9839T82**—**For better load containment, add these panels to convert platform truck to a box truck. Set includes four side panels and two end panels. All are 15″ high; color is black.

9839T85 ..... **Per Set** $318.15

Stainless Steel Platform Trucks

Easy cleaning and superior rust and corrosion resistance—that's what stainless steel platform trucks are all about. Handles are stainless steel (unless noted). Shipped assembled.

(F&G) Have four swivel casters with thermoplastic rubber (TPR) wheels (unless noted). *Lipped platforms* have a 1½″ high lip that prevents your load from sliding off.

(H&J) Have a removable handle and two rigid and two swivel casters with polyurethane wheels.

♦ Has two rigid and two swivel casters. ● Has a chrome-plated steel handle and solid rubber wheels.

Warning! **Never exceed capacities.**

Stake Trucks

Wood Platform

Steel Platform

Stakes at each corner hold your load in place during transport and are easily removed for quick unloading. Shipped assembled.

Rubber-tread wheels roll smoothly over rough surfaces. ***Polyurethane wheels*** handle heavier loads and are nonmarking.

Wood platforms absorb minor impact and reduce noise. They have two rigid wheels and two swivel casters mounted in a diamond pattern for better maneuverability. ***Steel platforms*** are more durable than wood. They have two rigid and two swivel casters with side wheel brakes.

Motorized Platform Trucks

Move heavy material without the physical stress of pushing and pulling—these trucks have a totally enclosed, maintenance-free drive system that moves up to 1,000 lbs.

The drive system runs on two rechargeable 12-volt batteries and includes an 8-ft. long self-retracting cord with three-prong plug. Battery charges in five to six hours. Trucks run approximately 15 miles/6 hours per charge.

Trucks are steel with a white powder-coated finish. The reinforced platform has a black nonskid surface. The handle-mounted controller has a two-speed switch, dual thumb controls for forward and reverse, a horn, and an emergency stop switch.

Trucks roll on four swivel casters with thermoplastic rubber (TPR) wheels and have two pneumatic drive wheels. Shipped assembled.

Cap., lbs.	Platform Size, Lg. × Wd. × Ht.	Handle Ht.	Wheel Dia.		Each

Polypropylene Carts

A

With Optional 4-gal. Utility Bin

B

With Optional Drawer

C

D

E

Made of strong yet lightweight polypropylene, these carts resist dents and corrosion. Shipped unassembled.

To Order: Please specify color where necessary.

Thermoplastic rubber (TPR) wheels roll over rough surfaces and are nonmarking and chemical resistant. ***Pneumatic wheels*** are quiet and shock absorbing.

Optional drawers mount under the top shelf. They can be locked and include two keys. Mounting hardware is included.

(A) Shelves have a 1″ high lip on three sides and a ¼″ high lip on one side. Frame is aluminum. Carts roll on four swivel casters.

(B) Same as *Style A*, but it has enclosure panels on each end.

(C) Same as *Style A*, but it has enclosure panels on three sides.

(D) Shelves have a 2¾″ high lip on all sides to prevent items from sliding off. Handle has built-in bins. Rounded corners protect walls and furniture from damage. Carts roll on two rigid and two swivel casters.

(E) Top shelf has recessed edge to catch small parts; bottom shelf has a 2½″ high lip on each end. Handle has built-in bins. Rounded corners protect walls and furniture from damage. Carts roll on two rigid and two swivel casters.

NSF-Certified Polyethylene Carts

With Three Shelves

Not only are these carts NSF certified, they have a 7/16″ high lip around the shelves to contain spills and prevent items from sliding off. The frame is chrome-plated steel. Carts roll on four swivel casters with thermoplastic (TPR) rubber wheels. Shipped unassembled. **To Order:** Please specify shelf color: blue or gray.

Carts with three shelves have a middle shelf that adjusts in 1″ increments.

Polyethylene Cart with Polypropylene Sliding Lid

A sliding lid offers two great functions—a work surface and a locking cover. The lid is made of durable light gray glass-filled polypropylene and slides in either direction to extend your work surface. You also can remove the lid completely and store it on the side of the cart. To secure items stored in the top shelf, the lid can be locked with a padlock (not included) that has a maximum shackle diameter of 3/16″. For padlocks, please see pages 2932-2943.

The cart is made of dark gray high-density polyethylene and has a handle with built-in tool holders at each end. The top shelf has a 3¼″ high lip; bottom shelf has a 3″ high lip. Both shelves have a drain plug. Cart rolls on four swivel casters with solid rubber wheels. Two of the casters have a side wheel brake. Shipped unassembled.

Polypropylene Organizing Carts

A

B

C

Organize your tools and materials and transport them to the job in these dent-resistant carts. All are made of black polypropylene and roll on two rigid and two swivel casters with thermoplastic rubber (TPR) wheels. Shipped unassembled.

(A) Two removable compartmentalized bins at each end and two large red bins that slide out from either side of the cart provide versatile storage. The handle has a built-in bin for small items. Cart also has a holder for storing an extension cord or outlet strip. The bottom shelf has a 2¾″ high lip on the ends to keep items from sliding off. The swivel casters have a side wheel brake to keep the carts stationary.

(B) The same as *Style A*, but has a red locking cabinet for additional secure storage. Two keys are included.

(C) The locking work surface top flips up to reveal a 1½″ deep compartmentalized tray. A red locking drawer mounted under the top offers additional secure storage. Drawer is 4″ deep; capacity is 40 lbs. The two included keys fit both the top and the drawer. Cart also has four hanging hooks and a surge-protected, three-receptacle, three-prong, 15-amp outlet strip with a 10-ft. long power cord and three-prong plug. The bottom shelf has a 4½″ high lip to keep items from sliding off. The handle has a built-in cup holder and small bin. The two swivel casters have a total lock that brakes the wheel and locks the swivel in one operation.

Polypropylene Cleaning Carts

D

E

A place for everything—these carts hold your brooms, mops, buckets, cleaning supplies, floor signs, and more. All have three shelves and a front platform ideal for holding a mop bucket. Carts also have grips that accommodate handles up to 1⅛″ diameter and a yellow vinyl bag that has a side zipper and attaches to the handle. Carts roll on two 8″ dia. rigid thermoplastic (TPR) wheels and two swivel casters with 4″ dia. thermoplastic (TPR) wheels. Shipped unassembled.

(D) Top and bottom shelves have a 3″ high lip; middle shelf and front platform have a 1½″ high lip. Cart has six handle grips. Bag capacity is 20.8 gallons. Color is blue (unless noted).

(E) Top shelf has two removable 10-qt. caddies that each hold six spray bottles. Middle shelf has a ¾″ high lip; bottom shelf has a 6¾″ high lip; and the front platform has a 3¾″ high back with a 1¾″ high lip on each side that tapers to ½″ high in front. Cart has five handle grips and a dust pan holder. Bag capacity is 34 gallons. Shelves and front platform are black.

Carts with Electrical Outlet Strip

A
4874T17 Shown

B

C

D

E
With Rubber Wheels

Don't get stuck without an outlet strip and power cord. Also known as A/V and audio/visual carts, these carts come with a three-receptacle, three-prong, 15-amp outlet strip with a 15-ft. long power cord and three-prong plug. Outlet strips are UL listed and CSA certified. Shelves have a 1/4″ high lip (unless noted). Carts roll on four swivel casters; two with a side wheel brake (unless noted).

Steel carts are heavier and more durable than polyethylene carts. They have a black powder-coated finish and include a nonslip mat on the top shelf. Shipped assembled; just install casters.

Polyethylene carts are lightweight and will not dent or rust. Color is black. Shipped unassembled.

Carts with locking cabinet provide secure storage. They have a recessed handle and include two keys.

(A) *Adjustable-height* carts' top shelf adjusts in 4″ increments.

(B) Interior shelves adjust in 1½″ increments.

(C) Shelves have a 1½″ high lip. Cart rolls on two rigid and two swivel casters. The swivel casters have a side wheel brake.

(D) All shelves have a slip-resistant surface. Top shelf adjusts to heights of 16″, 26″, 34″, and 42″.

Also Available: Carts with shelves in other colors. Please ask for 4731T888 and specify with or without a cabinet, shelf height, and color: blue, gray, orange, red, or yellow.

(E) Top shelf is reinforced with aluminum. *Carts with pneumatic wheels* have a 2¾″ high lip on the middle and bottom shelves and two rigid and two swivel casters with side wheel brakes.

● First capacity listed is for the top and bottom shelves; the second listing is for the adjustable interior shelf.
♦ First capacity listed is for the top shelf; the second listing is for all other shelves. ▲Top shelf height is 26″ to 42″.

Gentle-Ride Instrument Carts with No-Slip Shelves

Have a safe journey—the shelves on these steel carts have a nonslip vinyl surface that keeps your load in place. Two rigid and two swivel casters with pneumatic wheels (unless noted) provide a cushioned ride. Color is gray. Shipped assembled.

(F) Have a protective bumper around the top shelf to protect walls and furniture from damage.

(G) *Lipped shelves* have a 1½″ high lip.

(H) Have a protective bumper around the top shelf, a 5″ deep lockable drawer with two keys, and a six-receptacle, three-prong, 15-amp outlet strip with a 15-ft. long power cord and three-prong plug. The outlet strip is UL listed and has a circuit breaker.

♥ Has four swivel casters with polyurethane wheels and side wheel brakes.

Warning! Never exceed capacities.

Light Duty Bolt-Together Steel Carts

A

B

C With Optional Drawer

D

E

F

G

An economical alternative to welded carts for less demanding applications. All shelves are reversible from a lipped shelf that keeps items from sliding off to a flush shelf for a smooth work surface. Color is gray. Shipped unassembled.

Carts with 3″ dia. wheels roll on four swivel casters with polypropylene wheels.

Carts with 5″ dia. wheels roll on two rigid and two swivel casters with polypropylene wheels.

Carts with drawers can be locked with a padlock (not included) that has a maximum shackle diameter of 1/4″. For padlocks, please see pages 2932-2943.

(B) Shelves are enclosed on three sides. The back panel can be removed to allow access from two sides.

(D) Also includes four bin boxes for additional storage. The swivel casters have a side wheel brake.

(G) Cabinet has a lock with two keys.

Optional Drawer for Style C Carts— Carts accommodate one or two drawers. Drawer is mounted under top shelf with lip up.

Drawer is 18″ Lg. × 12″ Wd. × 4″ Dp. Capacity is 75 lbs.

4633T66 ..... **Each** $24.70

Welded Steel Carts

A

With Two Shelves and Polyurethane Wheels

B

C

With Rubber-Tread Wheels and Floor Lock

D

With Three Shelves

Welded-steel construction offers you the most durable carts around. All shelves are 12-ga. steel. Color is gray. Shipped assembled.

Thermoplastic rubber (TPR) wheels are quiet and protect your floor. ***Polyurethane wheels*** are smooth rolling and nonmarking. ***Rubber-tread wheels*** provide higher capacity and roll smoothly over rough surfaces. ***Phenolic wheels*** are water resistant and an economical choice.

(A) All bottom shelves have a 1½″ high lip. Middle shelf on carts with three shelves is the same (flush or lipped) as the top shelf. Carts roll on two rigid and two swivel casters with a side wheel brake (unless noted).

(B) Have a low top shelf to reduce lifting and a raised offset handle for easier pushing. Bottom shelf has a 1½″ high lip. Carts roll on two rigid and two swivel casters with a side wheel brake.

(C) Have an offset handle for easier pushing and a crossbar to protect your hands when items slide on the top shelf. Carts roll on two rigid and two swivel casters. *Carts with a floor lock* keep cart stationary when loading and unloading.

(D) All shelves are reinforced (unless noted). Carts roll on two rigid and two swivel casters. *Carts with a floor lock* keep cart stationary when loading and unloading.

■ Never exceed cart capacity. ★ Swivel casters have side wheel brake. ● Only bottom shelf is reinforced. ♥ Capacity per shelf is 1,333 lbs.

Warning! Never exceed capacities.

Welded Steel Carts with Writing Surface

Carts have a 21″ Wd.×12″ Lg. writing surface with a convenient storage pocket underneath—great for taking notes and holding paperwork. The bottom shelf has a 1½″ high lip. Carts roll on two rigid and two swivel casters with polyurethane wheels. Swivel casters have a side wheel brake. Color is gray. Shipped assembled.

Carts with flush top shelf provide a smooth work surface. ***Carts with lipped top shelf*** have a 1½″ high lip to keep items from sliding off.

NSF-Certified Steel Carts with Adjustable Shelves

Just what you need in food processing, laboratory, and other sanitary environments. Casters have a bumper to protect walls and furniture from damage. Shipped unassembled.

Extra shelves (sold separately) can be added without disassembling the cart.

Wire shelves minimize dust accumulation and maximize air circulation. Shelves adjust in 1″ increments except carts with gray finish, which adjust in 3″ increments. Carts roll on four swivel casters.

Type 304 stainless steel carts offer superior corrosion resistance. *Washdown casters* have a grease fitting, making them ideal for high-pressure washdown applications. *Conductive chrome-plated steel* carts have a braided cable that dissipates static charges. Surface resistivity is less than 10^3 ohms.

Solid shelves are ideal for small items and items with feet that could fall through wire shelves. Shelves are 18 gauge and adjust in 1″ increments. Carts roll on four swivel casters.

Heavy Duty Welded Type 430 Stainless Steel Carts

A *With Flush Top Shelf*

B *With Lipped Top Shelf*

Handling heavy loads and withstanding corrosion—that's what these carts are all about. All have welded construction. All middle and bottom shelves are lipped, except for 2586T49, T51, and T52, which have a flush middle shelf. Carts roll on two rigid and two swivel casters with nonmarking polyurethane wheels. The swivel casters have a side wheel brake. Shipped assembled.

Flush shelves provide a smooth work surface. ***Lipped shelves*** keep items from sliding off.

Aluminum Ladder Carts

C

D

No need to lug around a ladder and a cart—these carts do the job of both. A foot pedal on the bottom step activates the built-in floor lock that secures the cart for use as a ladder. Simply step off the ladder to release the floor lock.

All carts have a flush top shelf; middle and bottom shelves have a 1½″ high lip to keep items from sliding off. Shelves are ⅛″ thick.

Rails have nonmarking rubber feet. The steps are 4¾″ Lg.×17″ Wd. Carts roll on two rigid and two swivel casters with nonmarking rubber-tread wheels. Shipped assembled.

(C) Overall height is 50″; top step height is 30″.

(D) Overall height is 71½″; top step height is 50″.

Twin-Side Steel Shelf Carts

Carts are divided into two identical sides so you can efficiently organize two operations on one cart. Shelves are solid and mounted at a slight incline (unless noted) to keep your material from sliding off. Carts have a gray enamel finish. Shipped assembled.

Cart with Solid Divider and Sides— Cart rolls on two rigid and two swivel casters with phenolic wheels.

Carts with Mesh Divider and Sides— Bottom shelf has a 1½″ high lip to keep your load from sliding off. Carts roll on two rigid and two swivel casters with rubber-tread wheels. Casters are mounted in a diamond pattern to allow for tighter turns and better maneuverability.

With Solid Divider and Sides

★ Clearance from bottom shelf is 12″. ● Bottom shelf is flat and made of 12 ga. steel.

Three-Sided Mesh-Panel Steel Shelf Carts

Stack 'em high and have easy access to your load. Tall mesh panels on three sides give you good visibility and prevent your load from slipping off. All carts have a solid flush bottom shelf and a gray powder-coated finish. They roll on two rigid and two swivel casters with rubber-tread wheels. Shipped assembled.

Carts with two shelves have a solid top shelf that can be mounted with the 1½″ high lip up or down. Top shelf adjusts in 3½″ increments from 18″ to 48″ high above the bottom shelf using the included mounting clips.

With Two Shelves

Steel Wire Box Trucks

Thanks to the open-wire design of these trucks, you can keep your items visible and maximize air circulation. Trucks have chrome-plated side panels and a solid removable bottom panel with a galvanized finish.

Assemble using the included snap-lock connectors. Trucks roll on four swivel casters with polyurethane wheels. Shipped unassembled.

Fabric Hampers

Canvas

It doesn't matter if your load is wet or dry, these hampers can handle it. All have a welded spring-steel frame; the bottom support is wood reinforced with welded flat steel. They also have reinforced wear points, fabric handles, and a storage pocket. Hampers nest together for storage. They roll on two rigid and two swivel casters with rubber wheels. Casters are mounted in a diamond pattern to allow for tighter turns and better maneuverability, and they have debris guards to protect the wheel bearings from contamination. Shipped assembled.

Canvas hampers have riveted seams for added strength. Color is white.

Vinyl-coated nylon hampers resist dirt and grease and have a smooth, snag-free surface.

To Order: Please specify color: blue, gray, red, or yellow.

Spring-loaded shelves raise and lower the load for easier loading and unloading. Fabric-covered springs on each corner of the vinyl-covered steel shelf mount inside the hamper.

Also Available: Replacement hamper liners. Please ask for 2555T41 for canvas and specify hamper part number; or 2631T888 for vinyl-coated nylon and specify hamper part number and color.

Elevated Polyethylene Box Trucks

Go easy on your back—these elevated box trucks minimize bending when reaching for loads. The seamless, 1/4″ thick, polyethylene body is strong enough for wet and dry loads. It prevents leaks, resists many chemicals, and can be cleaned with hot water and detergent. The frame is made of tubular steel. Trucks roll on four swivel casters with rubber wheels. Shipped unassembled.

To Order: Please specify color: blue, gray, natural, red, or yellow. *Note:* Red is not recommended for wet materials because color may bleed.

Ribbed-Sidewall Polyethylene Box Trucks

Truck with Steel Frame

Ribbed sidewalls add strength while a seamless interior prevents leaks. The body is made of 1/4″ thick polyethylene that resists many chemicals and can be cleaned with hot water and detergent. The tapered shape allows trucks to nest together for space-saving storage. All casters have rubber wheels and debris guards to protect the wheel bearings from contamination. Shipped assembled.

Trucks with steel frame have a reinforced tubular steel frame with a gray powder-coated finish.

To Order: Please specify color: blue, gray, natural, or red. *Note:* Red is not recommended for wet materials because color may bleed.

Frameless sanitary trucks are made of resins that comply with USDA standards. All have encapsulated hardware and a capped drain for easy cleaning and sanitizing. Casters are mounted directly to the body. Color is natural.

★ Capacity is 760 lbs.; wheel diameter is 5″.

Steel-Reinforced Sidewall Polyethylene Box Trucks

Standard with Optional Hinged Lid

Towable

Don't fight the battle of bulging anymore. These trucks can hold higher capacities and keep their shape thanks to tubular steel reinforcement on the exterior of the sidewalls. The seamless, 1/4″ thick, polyethylene body prevents leaks, resists many chemicals, and can be cleaned with hot water and detergent. The tapered shape allows trucks to nest together for space-saving storage. Frame is made of tubular steel with a red powder-coated finish. Body is black. All trucks are USDA compliant for meat and poultry. Shipped assembled.

Standard trucks roll on two rigid and two swivel casters with polypropylene wheels. Casters are mounted in a diamond pattern to allow for tighter turns and better maneuverability.

Towable truck has a hinged tow bar that can be locked in an upright position for nontowing applications. Includes a hitch pin coupler for towing a maximum of three trucks. Truck rolls on two rigid and two swivel casters with polyurethane wheels. Maximum tow speed is 5 mph.

Optional hinged lids cover and conceal your load. They add approximately 8 1/2″ to the exterior height (unless noted). Color is black.

♣ Adds approximately 5″ to exterior height.

Warning! Never exceed capacities.

Double-Wall Rim Polyethylene Box Trucks

Give 'em your toughest jobs—these trucks have a double-wall top rim that can take the hardest knocks. The body is made of 3/16″ thick polyethylene that resists many chemicals and can be cleaned with hot water and detergent. The tapered shape allows trucks to nest together for space-saving storage. All have a molded-in handle and a steel frame. Trucks roll on two axle-mounted rubber wheels and two swivel casters with rubber wheels. Shipped assembled.

Heavy Duty Steel Box Trucks

With their heavy gauge welded-steel construction, these trucks can take a beating yet keep on hauling your waste, scrap, and bulk materials. Bottom panel is solid 12-ga. steel. Trucks roll on two rigid and two swivel casters with rubber wheels. All have a gray powder-coated finish. Shipped assembled.

Trucks with solid side panels prevent small items from falling out. Made of 12-ga. steel. ***Trucks with mesh side panels*** maximize air circulation and visibility of contents. Made of 13-ga. steel.

Cap., lbs.	Cap., cu. ft.	Interior Size, Lg. × Wd. × Ht.	Exterior Size, Lg. × Wd. × Ht.	Wheel Dia.	Solid Side Panels	Each	Mesh Side Panels	Each

Wheelbarrows

Load after load, these heavy duty wheelbarrows keep performing. All have a rugged steel frame and legs. Shipped unassembled.

Pneumatic wheels are quiet and shock absorbing.

Flat-free wheels are solid yet provide a cushioned ride.

(A) Tray is 17-ga. steel and has a rolled rim for extra strength. Handles are steel and have textured hand grips. Color is black.

(B) Tray is lightweight, rust-resistant, seamless gray polyethylene. Handles are wood for a comfortable grip in extreme temperatures.

Dump Carts

C

D

E

Save your back—these carts are easier to maneuver than a wheelbarrow. The location of the wheels allows the carts tighter turns and easier dumping. Shipped assembled.

Polyethylene trays are lightweight yet strong, and an economical alternative to steel. ***Steel trays*** have heavy gauge construction to withstand abuse.

(C) Frame is tubular steel with a green powder-coated finish; tray is black. 23115T12 rolls on two puncture-proof never-go-flat rubber (also known as semi-pneumatic) wheels; 23115T11 has two solid plastic wheels.

(D) A release mechanism allows you to completely flip the tray over for easier dumping. Frame is tubular steel with a green powder-coated finish; tray is beige. Carts roll on two flat-free foam wheels.

(E) Tray has a curved bottom and 1½″ wide reinforced rockers. Frame and tray are blue 14-ga. steel. Carts roll on two pneumatic wheels.

Polyethylene Tilting Dump Trucks

Forklift Pockets

Tough, sturdy, and easy to handle, these trucks are simple to empty—just tilt and dump. All have a seamless polyethylene body that resists many chemicals and can be cleaned with high pressure water or steam.

(A) Trucks have a tubular steel frame and handle (unless noted). Steel side rails (except for 2434T61, T62, and T66) provide added support. All trucks have two axle-mounted wheels and two swivel casters. Color is black. Shipped assembled.

13½- and 27-cu. ft. capacity trucks have hooks below the handle for hanging accessories (unless noted).

(B) Same as *Style A*, but truck is blue with a recycling imprint on the side. Shipped assembled.

(C&D) Sloped ends make loading and dumping these trucks easier. A rounded bottom also adds to the dumping ease. Frame is welded steel. Trucks roll on two rigid and one swivel caster (except for 8776T13, which has two rigid and two swivel casters). Trucks are made of FDA-compliant materials. Color is white. Some assembly is required (hardware included). *Style D* have ribbed walls for added strength.

(E) Trucks can be moved around your facility by a forklift. All have a welded tubular steel frame and handle, 6″ Wd. × 3″ Ht. forklift pockets, two axle-mounted wheels, and two swivel casters. Color is black. Shipped assembled.

28755T41 and *T42* have steel side rails for added support and hooks below the handle for hanging accessories. Fork pocket spacing is 17″ center-to-center. 28755T43 has fork pockets spaced 15″ center-to-center.

(F) Same as *Style A*, but with a ¾″ dia. hitch pin and 24″ long tow bar that allow you to connect and tow a maximum of three trucks using a lift or forklift truck with a trailer (drawbar coupler) hitch. Max. tow speed is 5 mph. Color is black. Shipped assembled.

Note: Don't exceed 2,100 lbs. total cap. for all three trucks.

(G) Made of structural polyethylene, these trucks are more durable than our other polyethylene trucks. They have two axle-mounted wheels and two swivel casters. Made of USDA-accepted and FDA-compliant materials. Color is black. Shipped assembled.

Polyethylene Tilt-and-Lock Hoppers

Just pull the handle to release the lock and tilt to empty; tilt back and the hoppers will lock in place. Made of polyethylene, these hoppers are lighter than steel hoppers, plus they won't rust, dent, or pit.

For strength, all hoppers have ribbed side walls and a red steel frame with forklift pockets. They roll on two rigid and two swivel casters with polypropylene wheels. Color is black. Shipped assembled.

Note: Not for use with hand hydraulic pallet trucks.

Steel Easy-Empty Hoppers

Hopper in Dump Position

Locking Latch on the Hoppers

Mobile 54-cu. ft. Capacity | *Mobile 27-cu. ft. Capacity* | *13½-cu. ft. Capacity with Optional Hinged Lid* | *6¾-cu. ft. Capacity*

Release the locking latch and these perfectly balanced hoppers dump their load and then automatically return to an upright, locked position. Made of steel with a gray finish, all have a smooth formed edge around the top and lip (where applicable) for superior durability. The interior seams are welded for strength and leak resistance. All have a pallet base with forklift pockets. Shipped assembled.

Mobile Hoppers—Have two rigid and two swivel casters. *Note:* Casters will add 9″ to the overall height of the hopper.

Cast iron wheels combine strength and durability with abrasion and heat resistance.

Polyurethane wheels allow loads to be rolled easily while protecting your floor.

Steel Bottom-Empty Hoppers

Fill these hoppers with your bulk material, hoist them to your work location, and then release the bottom trapdoor for quick, complete discharge. All are made of steel and have a hoisting eye. *Note:* Not recommended for fine material such as sand or powder.

The ***400-lb. capacity hopper*** has a handle on each side of the trap door. The ***800-*** and ***1,600-lb. capacity hoppers*** have one handle for the trapdoor and a positive shutoff to stop the discharge flow between loads.

400-lb. Capacity

Warning! **Never exceed capacities.**

Wood Deck Wagons

Look no further if you need a smooth and gentle ride for transporting fragile loads. Wood decks are quieter and more impact absorbing than steel decks. All wagons have a steel frame and a T-style pull handle. They roll on pneumatic wheels that cushion the load over rough surfaces and obstructions.

(A) A two-piece handle with a cushion grip steers each wheel independently for better stability. The T-end is removable for towing applications. Maximum tow speed is 25 mph. Frame and handle have a black painted finish. Shipped unassembled.

(B) Pivoting front wheels and axle provide "fifth-wheel" steering for tighter turns and easier maneuverability. The welded frame and handle have a blue enamel finish. Shipped assembled.

Steel Deck Wagons

Dependable and durable, these wagons have a lipped deck to keep items from sliding off. Pivoting front wheels and axle provide "fifth-wheel" steering for tighter turns and easier maneuverability. All have a vinyl-gripped handle that stays upright when not being pulled. Color is red. Shipped unassembled.

Never-go-flat rubber wheels are puncture proof. ***Pneumatic wheels*** offer a cushioned ride.

(C) Perforated decks allow drainage and keep debris from accumulating.

(D&E) Solid decks offer maximum durability.

Heavy Duty Steel Deck Wagons

Flush Deck with 16″ Dia. Pneumatic Wheels

Lipped Deck with Rubber-Tread Wheels

Bring out the big guns—these rugged wagons handle your heaviest loads. Deck is reinforced for strength. Pivoting front wheels and axle provide "fifth wheel" steering for easier maneuverability and tighter turns. All have a vinyl-gripped T-handle that stays upright when not being pulled. Color is gray. Shipped assembled.

Lipped-deck wagons have a 1½″ high lip to prevent loads from slipping off.

Pneumatic wheels offer a cushioned ride over rough surfaces. ***Rubber-tread wheels*** accommodate heavier loads on smooth surfaces.

Also Available: Wagons with a 2½″ ID tow eye at the end of the handle for intermittent towing up to 5 mph. These wagons have 16″ dia. pneumatic wheels. Please ask for 2538T888 and specify flush or lipped deck and deck size. *Note:* Capacity is reduced 25% in towing applications.

Steering Trailers

Pull up to five of these welded-steel trailers at the same time using their rear hitch. All roll on pneumatic wheels for a smooth, cushioned ride over rough surfaces. Max. tow speed is 5 mph. Shipped assembled.

Four-wheel steering trailers have pivoting axles connected by a tie rod for accurate tracking when pulling two or more trailers. Color is green.

Fifth-wheel steering trailers have pivoting front wheels and axle for easier maneuverability and tighter turning under heavy loads. Deck is reinforced with 12-ga. square steel channel. Color is gray.

Drawbar Couplers, Drawbar Eyes, and Tow Hook

All the accessories you'll need to properly connect your trailer for towing. ***Trailer/load weight capacity*** is the total weight being towed. ***Vertical capacity*** (also known as tongue weight) represents the weight of the load on the drawbar eye or hitch ball.

Note: Capacity is reduced 25% in off-road use.

Drawbar Couplers

Also known as pintle hitches, drawbar couplers are used with drawbar eyes (sold separately on this page) to connect your trailer to your vehicle for towing. Made of steel. Use Grade 8 screws (not included, see pages 3134-3137) for mounting.

Drawbar eye/ball couplers include a chrome-plated steel ball for use with ball-style hitch connections.

	Trailer/Load Weight Cap., lbs.	Vertical Cap., lbs.	*For Drawbar Eye* Min. Eye ID	Max. Ring Thick.	Ball Dia.	Mounting Screw Size		Each

Tow Hook

Mount this hook to your bumper or trailer for a simple towing connection. Made of forged steel. Use Grade 8 screws (not included, see pages 3134-3137) for mounting.

Trailer/Load Wt. Cap., lbs.	Mounting Plate Thick.	Mounting Screw Size		Each
10,000	1″	½″	2589T9	$10.66

Warning! **Never exceed capacities.**

Hitch Receivers, Inserts, Pins, and Balls

Like the examples shown at left, you can create a hitch that's right for your towing needs. All the components you need for a complete hitch are sold separately.

Trailer/load weight capacity is the total weight being towed.

Vertical capacity (also known as tongue weight) represents the weight of the load on the drawbar eye or hitch ball.

Receivers and Inserts

All receivers and inserts are steel with a black powder-coated finish (unless noted).

(A&B) Receivers are standard 2″ square models. *Style A* includes mounting hardware.

(C) Raise or drop the ball to the height that works for your trailer. Accept ball with a 1″-14 thread size.

(D&E) Three hitch sizes in one. Inserts include 1⅞″, 2″, and 2⁵⁄₁₆″ dia. chrome-plated steel balls.

Adjustable insert has a 12″ vertical adjustment in 1¼″ increments.

(F) Get the versatility of mating with a drawbar eye or hitch ball coupler. The 2″ dia. ball is chrome-plated steel. Insert accepts drawbar eye with a 2½″ to 3″ ID and maximum eye ring thickness of 1⁹⁄₁₆″.

(G&H) Allow you to connect your drawbar coupler to a receiver. The coupler mounts to the mounting plate with ½″ dia. Grade 8 screws (not included). Please see page 1281 for couplers and pages 3134-3137 for Grade 8 screws.

Hitch-Ball Trailer Couplers

Straight Coupler

Coupler Lock

Bolt or weld these steel couplers to the trailer tongue for easy hook-up to the towing vehicle's hitch ball. All couplers meet Society of Automotive Engineers (SAE) J684 standard classes.

Note: Trailer/load weight capacity is the total weight being towed.

Straight couplers bolt or weld to a single-channel trailer tongue. *Bolt-on* couplers use Grade 8 screws (not included, please see pages 3134-3137) and have a ⁵⁄₁₆″ dia. hole in the latch lever to accommodate the coupler lock (sold separately) or your own padlock.

A-frame couplers weld onto an A-frame (two-channel) trailer tongue set at a 50° angle.

Warning! Never exceed capacities.

Automatic Trailer Couplers

No worries that these weld-on components will uncouple when turning or going over small obstacles. The trailer-mounted jaw has a spring-loaded lever that opens as the vehicle-mounted bail presses against it. Once the bail pushes past the open lever, it closes to secure the bail for towing. To uncouple, just depress the lever. Made of steel with blue finish. Use for towing over level surfaces. Not recommended for highway use.

Note: Trailer/load weight capacity is the total weight being towed.

Trailer/Load Weight Cap., lbs.	O'all Size, Lg.×Wd.×Ht.	Mounting Plate Size, Wd.×Ht.	Coupled Lg.		Each

Easy-Push Trailer Mover

Make your job easier when moving trailers. A long handle with rubber grips provides added leverage while pneumatic wheels allow easy rolling.

Mover is made of steel with a black powder-coated finish and has a removable chrome-plated hitch ball. Shipped unassembled.

Note: Vertical capacity (also known as tongue weight) represents the weight of the load at the hitch ball.

Vertical Cap., lbs.	O'all Wd.	Hitch Ball Dia.	Ground-to-Ball Ht.	Handle Lg.	Wheel Dia.		Each
700	24″	1⅞″	16″	29″	12″	22275T12	$285.02

Battery-Powered Trailer Movers

With these movers, one person can do the work of two or three. Ideal for moving aircraft, assembly lines, trailers, and more. These movers operate on two 12-volt batteries (included) and have a built-in 10-amp battery charger and level meter. Under typical conditions, movers will run approximately eight hours on a full charge.

Movers are equipped with a hydraulic hitch ball lift that raises the ball into the coupling and transfers the weight to the mover for better traction. The hitch ball can be mounted to the lift at a height of 9″ to 15″ and adjusts in 2″ increments. The lift has 7″ of travel. Handle has diamond-patterned grips. Shipped assembled.

Note: Trailer/load weight capacity is the total weight being towed. Vertical capacity (also known as tongue weight) represents the weight of the load at the hitch ball.

Pneumatic wheels are quiet and shock absorbing. ***Flat-free wheels*** are solid yet provide a cushioned ride.

Trailer/Load Weight Cap., lbs.	Vertical Cap., lbs.	Overall Size, Lg.×Wd.×Ht.	Hitch Ball Dia.	hp	Travel Speed, fpm	Wheel Dia.	***Pneumatic Wheels***	Each	***Flat-Free Wheels***	Each

Trailer Safety Chains

Don't let your trailer get away from you if the hitch fails. Chains and hooks are steel with an electro-galvanized finish. Do not use for lifting applications. Chains must be used in pairs and each chain must meet or exceed your trailer capacity. For example, if you need to haul a 7,600-lb. load, choose two 25475T8 chains, each with a 7,600-lb. trailer/load weight capacity. Chains meet Society of Automotive Engineers (SAE) J684 standards.

Note: Trailer/load weight capacity is the total weight being towed.

3,000- to 7,600-lb. capacity chains have an S-hook at each end.

16,000-lb. capacity chain has a clevis-style hook with a latch at one end.

Trailer/Load Weight Cap., lbs.	***Chains*** Trade Size	Dia.	Lg.	Hook Opening		Each	***Additional Hooks***	Each
3,000	3/16″	7/32″	48″	¾″	25475T2	$7.84	25475T1	$1.50

Trailer Kingpin Locks

Don't compromise security—cover the entire kingpin of your trailer to prevent theft. Lock is recessed and housed in high-strength cast iron to prevent twisting and prying. The pick-resistant locking mechanism slides in like a drawer. Choose from locks keyed differently (each opens with a different key) and keyed alike (all open with the same key). For optimal security, locks include two keys that may only be duplicated by the manufacturer.

Max. Kingpin Size	Overall Size, Lg.×Wd.×Ht.	***Keyed Differently***	Each	***Keyed Alike***	Each
2½″	6″×4½″×3″	1757A39	$127.27	1757A42	$127.27

Engine, Casting, and Die Stands

The mounting plate on these stands rotates 360° and locks in position. Four arms adjust to hold various castings and come with mounting hardware. Stands have a heavy duty steel frame with cast iron wheels (6671A16 are 3″ OD and A17 are 3½″ OD). They quickly disassemble for transport and storage.

Cap., lbs.	O'all Size, Lg.×Wd.×Ht.		Each
750	31½″×31½″×36¾″	6671A16	$156.14
1,250	33⅜″×33⅞″×42¾″	6671A17	239.45

Ergonomic Steel Hand Trucks

Pivot your load over curbs and single steps with less effort compared to traditional hand trucks. The 5″ dia. front wheels pivot over obstacles without the need to reverse. This hand truck also supports the load in a reclined position, leaving your hands free to open doors. Rear wheels are 8″ dia.; they are foam-filled and puncture-resistant to withstand rough, uneven surfaces. Frame and platform are steel with a yellow powder-coated finish. Shipped assembled, except the wheels must be installed (hardware is included).

Cap., lbs.	Load Plate, Wd.×Dp.	Handle Ht.		Each
600	15⅝″×9″	54″	5351T11	$426.67

Warning! ***Never exceed capacities.***

Cycles

A Cross-Bar Style

Rear Cabinet

C With Rear Perforated Basket

B Step-Through Style

D

Our single-speed classic cycles are made in the USA and have basket, cabinet, or platform storage to fit your transport needs. All frames are made of steel with an orange painted finish (unless noted) and have chrome-plated fenders and padded seats. Shipped partially assembled.

Pneumatic wheels are quiet and shock absorbing. ***Flat-free wheels*** are solid yet provide a cushioned ride.

(A) Wire basket is zinc-plated steel.
(B) Wire basket is chrome-plated steel.
(C) *Perforated basket* is steel with a black enamel finish.
Rear cabinet is steel with a gray enamel finish. The hinged lid can be locked with a padlock (not included) that has a maximum shackle diameter of 1/2″. For padlocks, please see pages 2932-2943.
(D) Front platform is steel with a black enamel finish.

Quilted Protective Pads

Also known as furniture pads, these quilted pads give your furniture and equipment added protection during moving and storage. The quilted pattern prevents bunching, and the double-stitched edging reduces rips and snags. One side of the pad is blue; the other side is dark blue.

Polyester and ***heavy duty polyester*** pads are made of polyester and have blended polyester/wool fill.

Heavy duty cotton/polyester pads are more durable than polyester pads. They are a blend of cotton and polyester and have blended polyester/wool fill.

Plastic Equipment-Moving Slides

And away you go—slide equipment and furniture across carpeted and smooth surfaces. Slides have a smooth bottom surface and a ½″ thick foam pad on the top that holds the load in place. Slides are white; foam is black. *Note:* Do not use slides on concrete.

The *11½″ long* slide is for items with legs. Place one slide under each leg. The *48″ long* slide is best for items without legs such as file cabinets and boxes. Slide has holes for a pull strap (sold separately).

Size, Lg.×Wd.		Each 1-3	Each 4-Up
11½″×6¾″	2137T46	$11.84	$9.98
48″ ×6¾″	2137T47	23.68	19.96
Pull Straps for 2137T47 (Set of Two)	2137T48	Per Set	$12.45

Two 2137T47 Slides Shown with Pull Straps

Tilt-and-Lift Dollies

Here's an easy way to move your file cabinets, drums, and crates. Slide the load plate of the dolly under the edge of the load and step down on the other end of the dolly to raise the load.

Two axle-mounted rubber wheels under the load plate balance the load and prevent it from tipping. Two swivel casters with rubber wheels are mounted at the step-down end for easy turning.

Dollies are made of square steel tubing with a vinyl coating for a nonskid, nonmarring contact surface. Shipped assembled.

Cap., lbs.	Overall Size, Lg.×Wd.×Ht.	Wheel Dia.		Each
600	32″×15″×3½″	3″/2½″	2649T14	$124.20
600	32″×18″×3½″	3″/2½″	2649T16	135.00

Lift-and-Roll Dollies

Position these dollies under your load, depress the removable handle to lift the load, and you're ready to roll. A safety latch locks the dollies in the raised position; a handle-activated lock release lowers the load. The platform and handle are square steel tubing with a red vinyl coating for a nonskid, nonmarring contact surface. All other surfaces have a silver powder-coated finish. Dollies roll on four swivel casters with rubber wheels. Shipped assembled.

With Desk Attachment

2761T13 & T15

Single-Pedestal Desk Attachment—Acts as a pedestal substitute for moving right- and left-hand single-pedestal desks. The support height is adjustable to fit a variety of desk sizes. Capacity is 250 lbs.

2761T17 ..... Each $120.12

Steel Dollies

A

B

C

D

With Optional Pulling Handle

E

F

G

Put these steel dollies to the test in your toughest environments. All roll on four swivel casters. Shipped assembled.

(A) Has reinforced corners for strength and vinyl end caps to protect walls and furniture from damage. Made of welded square tubing with a green powder-coated finish. Wheels are rubber.

(B) Welded angle iron frame and extra cross braces withstand abuse. Dollies have an eye for attaching a pulling handle (sold separately). Wheels are rubber (unless noted).

(C) The 4″ wide raised ends have a protective coating for a nonskid, nonmarring contact surface. Have bolted construction and a gray powder-coated finish. Wheels are polypropylene.

(D) A solid flush deck lets you easily load and unload. Have an eye for attaching a pulling handle (sold separately). Dollies have a green powder-coated finish. Wheels are rubber (unless noted).

(E) Same as *Style D* except deck has a 1″ high lip to keep your load from sliding off. Wheels are rubber (unless noted).

(F) Has a low-profile front edge for easy loading and a 2¼″ high lip on the other three sides to keep your load from sliding off. Has a green powder-coated finish. Wheels are polyurethane.

(G) The deck height gradually lowers from the ends to create a recessed center to hold the wheels of vehicles, trailers, and machinery. Have a red powder-coated finish. Wheels are polyurethane.

♦ Wheels are cast iron. ★ Usable deck size is 21″×21¾″; deck height at front is 2½″.

Optional Pulling Handle for Styles B, D, and E—Pull rather than push your dolly. Handle is made of ⅜″ dia. steel and is 36″ long.

2596T7 ..... Each $11.08

Warning! Never exceed capacities.

Movers' Choice Wood Dollies

A

With Raised Rubber-Capped Ends B

C

D

A nonmarring, impact-absorbing, and quiet ride is what these dollies are all about. All dollies roll on four swivel casters with impact- and chemical-resistant polypropylene wheels. Shipped assembled.

Raised carpet-covered ends and ***carpet-covered deck*** provide added protection from damage to the load.

Raised rubber-capped ends also provide added protection from damage, plus they grip the load to keep it from sliding.

Easy-Stack Wood Dolly

Single Dolly

Five Dollies Stacked

A space-saving design lets you stack and transport up to 35 dollies. As you stack, four knobs on the bottom of each dolly interlock with the holes on the top of the previous dolly. This ensures proper spacing and compact stacking.

The deck is made of 1″ thick plywood and the legs are carpet covered to keep your load from slipping off. Dolly rolls on four swivel casters with rubber wheels. Shipped assembled.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Wheel Dia.		Each
800	24″ × 24″ × 5″	3″	5336T9	$53.88

Aluminum Dollies

E

F

Lightweight yet strong, these dollies are easy to pick up and carry to where you need them. All roll on four swivel casters.

(E) Have riveted construction and a ⅜″ dia. hole in the frame for installing a tow hook, rope, or chain (not included). Casters have polypropylene wheels that must be attached with included fasteners.

(F) Welded-channel construction and a center brace provide the strength you need for heavier loads. Casters have phenolic wheels. Shipped assembled.

Polyethylene Dollies

G

H

NSF J

K

Look no further if you need dollies that are lightweight, corrosion resistant, nonmarring, and easy to clean. All roll on four swivel casters (unless noted) with cushion rubber wheels.

(G&H) Both styles are reinforced with steel. Color is red. Shipped assembled. *Style H* has rubber-capped ends that grip the load.

(J) NSF certified. Color is blue. Shipped unassembled.

(K) Have a lip to keep load from sliding off. Color is gray. Shipped assembled. 24385T62 has five swivel casters.

NSF-Certified Aluminum Dolly

Meet your sanitary requirements with our NSF-certified and USDA-approved dolly. Deck is made of 1/8″ thick rustproof aluminum, so it's lightweight yet strong enough for heavy loads. It has a 1 3/4″ high lip on three sides to keep your load from sliding off and open corners for easy drainage. Dolly rolls on two rigid and two swivel casters with polypropylene wheels. Shipped assembled.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Wheel Dia.		Each
1,200	33″ × 27″ × 8″	5″	1666T7	$196.47

Optional Pulling Handle—Pull rather than push your dolly. Handle is made of 3/8″ dia. steel and is 36″ long.

1666T9 ..... Each $20.60

Adjust-a-Length Aluminum Dolly

Also known as an appliance dolly, this dolly is adjustable in length to handle a variety of moving jobs. Used (and sold) in pairs, each half of the dolly has a 3″ × 3″ support at each end. A nonmarring rubber pad on the top of the supports grips your load. Each half of the dolly rolls on 16 thermoplastic rubber (TPR) wheels (eight wheels mounted under each support). Shipped assembled.

Cap. per Pair, lbs.	Adjustable Lg.	Ht.	Wheel Dia.		Per Pair
2,000	18″ to 28″	1 1/2″	1 1/4″	2402T13	$33.33

Large-Deck Heavy Duty Steel Dollies

Welded steel channel and six axle-mounted wheels provide strength for moving pallets, machinery, large containers, and other heavy equipment. The center wheels are mounted lower than the end wheels for easier pivoting. Dollies have a yellow powder-coated finish. Shipped assembled.

6,000-lb. capacity dolly has steel wheels. ***10,000-lb. capacity*** dolly has cast iron wheels.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Center Opening, Lg. × Wd.	Wheel Dia.		Each
6,000	36″ × 24″ × 6 3/16″	33 3/16″ × 12 1/2″	5″	2735T3	$526.01

Large-Deck Heavy Duty Aluminum Dollies

Although they weigh less than comparable steel dollies, these welded aluminum channel dollies are just as strong. Plus they're easier to get moving. Dollies roll on axle-mounted phenolic wheels. The center wheels are mounted lower than the end wheels for easier pivoting. The frame has an extra set of axle holes so the center wheels can be mounted at the same height as the end wheels. Shipped assembled.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Center Opening, Lg. × Wd.	No. of Wheels	Wheel Dia.		Each

Hydraulic Lift-and-Move Fork Dollies

Your solution for moving large, bulky, and long loads. Dollies are used (and sold) in pairs. Each half has adjustable-width forks that go under the load and a hand-operated hydraulic lift that lifts and lowers the load. Steel cleats on the forks grip the load and a 12′ Lg. × 2″ Wd. web strap with a ratchet buckle attaches to each side of the dollies to stabilize and secure the load. Dollies are welded steel and each rolls on two swivel casters with phenolic wheels (unless noted). Shipped assembled.

● Wheels are cast iron.

Wheeled Levers

Here's the leverage you need when raising a big load. Also known as Johnson bars, pry bars, pry trucks, and mules, these levers are often used in pairs to lift each end of a load so a dolly can be slid underneath. Shipped assembled.

Rubber wheels are quiet and protect your floors. ***Cast iron wheels*** handle heavy loads.

(A) Have a 1 3/4″ thick oak handle and beveled steel load plate with green powder-coated finish.

(B&C) *Style B* has a tubular handle, a wedge-style steel load plate, and a blue painted finish. *Style C* has a tubular handle and a beveled steel load plate with grooves for a better grip on the load. A steel step bar opposite the load plate makes it easier to push the load plate under the load. Lever has a blue powder-coated finish.

Heavy Duty Low-Profile Dolly

Low to the ground and high in strength—this compact welded-steel dolly has a 1/4″ thick deck with a 1/2″ high lip on two sides for better load retention. It rolls on four axle-mounted heat-treated steel wheels. Shipped assembled.

Cap., lbs.	Overall Size, Lg. × Wd. × Ht.	Wheel Dia.		Each
10,000	11 1/2″ × 8 3/4″ × 2 5/16″	2″	2725T81	$151.20

Compact Swivel-Plate Roller Dollies

Swivel Plate

Tilt-and-Swivel Plate

Their small size combined with the swivel plate make these dollies easy to handle and position when moving heavy machinery. The plate is removable so the dollies can be permanently installed on equipment that's moved frequently. Use 1/2″-13 cap screws (not included, please see pages 3141-3143) for installation. Dollies are welded steel and roll on two steel rollers.

Tilt-and-swivel plate dolly has a tilt plate under the swivel plate to compensate for uneven floors. Dolly includes a 5 1/4″ long side bar to ease turning the dolly under load.

Dollies

Grip-Plate Steel Roller Track Dollies

Cushion-Grip Swivel Plate

Cushion-Grip Swivel Plate with Lock

Cushion-Grip Rigid Plate

Diamond-Grip Swivel Plate with Lock

Diamond-Grip Rigid Plate

Small-diameter hardened-steel rollers rotate around a center plate to evenly distribute weight and make moving heavy equipment easier. All have welded construction and a green painted finish.

Cushion-grip dollies have a black neoprene rubber pad on the plate that firmly grips your load without damaging the surface.

Diamond-grip dollies have small teeth on the plate that grip the load.

Swivel plates provide controlled turning as well as straight-line movement. ***Swivel plates with lock*** provide more controlled turns by locking every 45°. ***Rigid plates*** are ideal for straight-line movement.

E

Conquer your most demanding moving requirements with these welded-steel dollies. The plate has steel cleats that grip the load and keep it from slipping.

Polyurethane rollers are quieter than steel rollers and protect your floor. ***Rigid plates*** have cleats along their entire length. Ideal for straight-line movement. ***Swivel plates*** are 7″ sq. and provide controlled turning as well as straight-line movement.

Smooth-Surface Dollies— Four rollers provide easy movement over smooth surfaces.

All-Surface Dollies— Four larger center rollers and one smaller roller on each end allow for easy transport over uneven surfaces.

Easy-Turn All-Surface Dollies— Two larger center rollers rotate independently for easy turning and exceptional maneuverability. A single smaller roller on each end allows for easy movement over uneven surfaces.

48″ Long Steering Handle for Dollies with a Swivel Plate ..... 9914T19 Each $188.29

♦ Capacity is 50,000 lbs.

Cushion-Grip Plate Nylon Roller Dollies

F G

H
25005T72

J

K

Used alone or with each other, these dollies make easy work of moving heavy, bulky loads. Their design lets you move over both smooth and uneven surfaces. A textured rubber pad on the plate grips your load without damaging the surface. All dollies are made of welded steel with a red powder-coated finish and roll on nonmarking nylon wheels.

Swivel plates provide controlled turning as well as straight-line movement. ***Rigid plates*** are ideal for straight-line movement.

(F&G) Have a T-style steering handle. *Style G* also have a 2″ ID ring for towing applications up to 1.9 mph.

(H) The adjustable frame has two contact points and fits a variety of loads. Both have a T-style steering handle; 25005T72 also has a 2″ ID ring for towing applications up to 1.9 mph.

(J&K) Two contact points are connected by an adjustable bar that keeps them parallel. *Style K* dollies have convenient carrying handles.

Versatile-Top Steel Roller Track Dolly Kits

Use these dollies with their rigid top plate for straight-line movement, or add the included diamond-top swivel top plates with lock for controlled turning as well as straight-line movement. The diamond-top swivel top plates have small teeth to grip your load and come with a neoprene rubber pad that can be placed on top to create a nonmarring grip top. The swivel locks every 45° for better control during turns. Dollies are made of welded steel with a green painted finish. Small-diameter, chain-activated, hardened-steel rollers rotate around the center plate to evenly distribute the weight for easier moving.

Each kit contains four dollies, four diamond-top swivel top plates, four neoprene rubber pads, two 48″ long steering handles, and a steel storage case.

Also Available: Individual dollies and diamond-top swivel top plates with lock. Please ask for 2723T888 and specify a dolly or swivel top plate and the capacity.

Extra 48″ Steering Handle ..... 2723T15 Each $76.78

Multidirectional Roller Dollies

Maneuver machines and heavy loads into confined spaces. The rollers on these dollies swivel independently, allowing movement in any direction. All dollies have a textured rubber pad in the center to grip the load. Dollies are welded steel with a red powder-coated finish, have convenient carrying handles, and roll on nonmarking nylon rollers.

Cap., lbs.	Plate Dia.	Overall Size, Lg. × Wd. × Ht.	Rollers No.	Rollers Dia.		Each

Dual Swivel-Plate Dollies

Two plates, one smaller than the other, swivel independently for maneuverability in tight spaces. Ideal for theatrical applications. Ball bearings between the plates allow you to turn and position the load without any caster movement. The smaller plate has four ½″ × ¾″ slots for permanent mounting (fasteners not included). All dollies are made of steel with a black painted finish and roll on three swivel casters.

600-lb. capacity dolly has dual thermoplastic rubber (TPR) wheels.

2,000-lb. capacity dolly has polyurethane wheels.

Cap., lbs.	Overall Size, Dia. × Ht.	Wheel Dia.		Each
600	14″ × 5⅝″	3″	83485T11	$345.83
2,000	18″ × 7¼″	4″	83485T12	454.17

Multidirectional Tripod Dollies

If you need to move machinery and equipment with legs look no further—just place each leg into the recessed center of a dolly and away you go. Dollies have three swivel casters for maximum maneuverability.

Rubber wheels are high impact. ***Cast iron wheels*** combine strength and durability to handle higher capacities than rubber wheels. ***Phenolic wheels*** are lightweight and protect your floors.

(A) Use for large diameter legs. Made of cast iron.

(B) Same as *Style A*, but these have a smaller recessed center.

(C) Moves loads with and without legs. Has a ¼″ high lip on the longest edge for load retention. Made of 12-ga. steel with a vinyl coating for a nonskid, nonmarring contact surface.

Air-Glide Multidirectional Dolly Kits

Also known as bearing movers, air casters, and air bearings, these dollies float your load on a cushion of air. As air escapes out of the neoprene air diaphragm located under the aluminum top plate, your load is lifted for easy, frictionless movement in any direction over smooth surfaces. Not only are these dollies ideal for unevenly distributed loads, their low lift height reduces the risk of injury to personnel and damage to your equipment.

Kits include four dollies, a regulator with an on/off control to ensure proper air flow to each dolly, and four 20-ft. long hoses with quick-connect fittings.

Sheet and Panel Cradle Dollies

Make transporting large, long loads such as doors, sheet stock, and partitions a one-person job. Dollies have a carpet-covered, 3/16″ thick steel cradle for a nonmarring contact surface. The cradle adjusts to accommodate a variety of load widths. All roll on two never-go-flat rubber (also known as semi-pneumatic) wheels. Shipped assembled.

A-Frame Trucks

Quickly and easily load these trucks from both sides. All have welded steel construction. Shipped assembled.

(A) Trucks have a 1″ high lip along the length of the deck to keep your load from sliding off. They have a 12-ga. steel deck, a gray powder-coated finish, and roll on four swivel casters with phenolic wheels.

(B) Have nonmarring neoprene pads on contact surfaces, blue nylon web tie-down straps with zinc-plated quick-tight cam-style buckles, and welded forklift pockets. Made of 1/4″ thick steel with a hot-dipped galvanized finish for corrosion resistance. Roll on two rigid and two swivel casters with phenolic wheels. Swivel casters have a side wheel brake. All casters have a quick-release pin for easy removal to convert the trucks to storage racks. Overall height is reduced by 11″ without casters.

Rail Trucks

Trucks have a flush deck for easy loading and unloading from the ends. Their removable rails allow you to configure the truck to suit your load. All roll on two rigid and two swivel casters (unless noted). Shipped unassembled.

(C) Trucks are corrosion resistant and easy to clean. Deck is reinforced with steel and has a gray nonskid surface. The rails are steel with a gray powder-coated finish.

(D) Made of 12-ga. steel. The deck is reinforced and has a red vinyl coating for a nonskid, nonmarring contact surface. Rails have cross-bars for added strength and a silver painted finish.

(E) *1,200-lb. capacity truck* is 12-ga. steel with a gray powder-coated finish. *2,400-lb. capacity trucks* are made of 16-ga. steel with a silver painted finish. The deck and top half of the rails have a red vinyl coating for a nonskid, nonmarring contact surface.

(F) Rails at three different heights offer greater versatility. Trucks have a 12-ga. steel deck and a gray powder-coated finish.

(G) Deck is 12-ga. steel. All trucks have a powder-coated finish. The deck is gray; the rails are blue. The two swivel casters have a face wheel brake.

Bar and Pipe Cradle Trucks

Let gravity keep your long loads centered and balanced—great for pipe, bar stock, and channel. The open design allows easy loading and unloading with forklifts and slings. All have welded steel construction. Color is gray. Shipped assembled.

(A) Quick-turn trucks have casters mounted in a diamond pattern for better maneuverability. 2270T3 rolls on four swivel casters with phenolic wheels. 8780T11 rolls on two rigid and two swivel casters with steel wheels.

(B) Ergo-height truck has a higher cradle height for less bending during loading and unloading. It rolls on four swivel casters with phenolic wheels.

(C) High-capacity truck moves and stores your heaviest loads. It has a swivel caster with a phenolic wheel on each end and two axle-mounted phenolic wheels in the center for better maneuverability and rolling over obstructions.

Spool Storage Racks

Keep spools of wire, cable, hose, chain, rope, and tubing neat and orderly with these steel racks. Shipped unassembled. Spools not included.

(D) Made of 19-ga. steel with a gray powder-coated finish. Spindles are polished steel. Racks have four 3/8″ dia. mounting holes (fasteners not included).

(E) Consists of a 13-ga. steel frame, galvanized steel spindles, and seven V-shaped shelves for additional support. Frame and shelves have a gray enamel finish. Shelves adjust in 1½″ increments.

(F) Schedule 40 pipe spindles support your heaviest spools. The frame is 7-ga. steel with spindle brackets that adjust in 2″ increments. Frame has a gray enamel finish; spindle brackets have an orange enamel finish. *Note:* These racks should be securely bolted to the floor (fasteners not included). ***Add-on sections*** include all the components needed to attach to a rack and extend the width for additional storage.

Adjustable-Spindle Mobile Spool Rack

Simply designed to store a lot of spools and make dispensing easy. Six aluminum spindles extend out 22″ from both sides of the frame and adjust in 7″ increments to accommodate spools up to 24″ dia. Spools are secured to the spindles with the included shaft collars. The frame is tubular steel with a gray powder-coated finish. Rack rolls on four swivel casters (two with a side wheel brake) with polyurethane wheels. Shipped unassembled. Spools not included.

Cart Cap., lbs.	Cap. per Spindle, lbs.	Spindle Size, Dia.×Lg.	Overall Size, Lg.×Wd.×Ht.	Wheel Dia.		Each
900	150	¾″×44″	32″×48″×70″	3″	8762T48	$339.23

Spool Cart

All-in-one convenience—transport, store, and dispense wire from this cart. Three steel spindles extend out 12½″ from both sides of the frame to hold up to twelve 7″ Dia.×5½″ Wd. or six 7″ Dia.×12¼″ Wd. spools. A welded ¾″ dia. washer on the end of the spindles keeps spools in place. A wire guide on the handle allows for controlled dispensing. The frame is red square steel. Cart rolls on four swivel casters (two with a side wheel brake) with solid rubber wheels. Casters must be installed (fasteners included). Spools not included.

300	50	½″×26″	26″×16″×16½″	3″	2595T1	$144.12

Warning! ***Never exceed capacities.***

Removable-Rack Spool Hand Truck

Load up this truck and transport all your spools at the same time, or leave the truck where it is and utilize the removable racks to hand carry only the spools you need.

The truck has three 17″ wide racks and two 22″ wide racks. All have a ½″ dia. spindle. The truck also has a built-in tray and two holders for conduit benders up to 1″ dia. It rolls on two never-go-flat rubber (also known as semi-pneumatic) wheels. Made of steel with a red finish. Shipped assembled. Spools not included.

Opt. wire guide slips over the load plate and has ten ½″ dia. holes for controlled wire dispensing. ***Opt. tool box*** has removable dividers and includes mounting hardware. Truck can hold two tool boxes.

Cap., lbs.	Max. Spool Dia.	Overall Size, Lg.×Wd.×Ht.	Wheel Dia.		Each

Optional Steel Wire Guide—14″ Lg.×14″ Wd.				22395T5	66.29
Optional Steel Tool Box—11″ Lg.×6″ Wd.×5″ Ht.				22395T6	62.87

Roll-On Low-Profile Reel Stands

No need to lift heavy reels—just roll them up the built-in ramp for easy loading. Rollers on the top of the stands allow the reels to spin freely as you wind or dispense rope, wire, hose, and chain. Stands have four mounting holes for permanent installation (fasteners not included). Shipped assembled.

1,200-lb. capacity stand holds reels up to 28″ wide. Made of ¼″ thick structural steel and 12-ga. steel. Color is green.

1,500-lb. capacity stand is designed to be used in pairs to accommodate reels of any width. Made of 7-ga. steel. Color is red and yellow.

1,200-lb. Capacity

Two Jacks Shown with Spindle (All Sold Separately)

Single-Cylinder Hand Trucks

Move individual cylinders safely and easily. Shipped assembled.

Four-wheel trucks have rear legs with swivel casters for additional stability and better mobility. ***Steel*** and ***aluminum trucks*** are welded and have cross braces that support the cylinder when the truck is tilted.

(A) Trucks have a chain to secure the load and a green powder-coated finish. Trucks *with stair glides* ease the load over stairs and curbs. Trucks *with stair climbers* have a rotating nylon belt for moving over stairs and curbs.

(B) Truck is lightweight and spark resistant. It has a chain to secure the load and a dual-wheel hand brake for better load control on stairs, ramps, and inclines.

(C) Truck resists weather, corrosion, and sparks. A nylon strap secures the load. Color is black.

(D) The rear legs fold for compact storage. Trucks have a chain with plastic sleeve to secure the load and a green powder-coated finish. *Conductive wheels* have resistivity less than 250,000 ohms.

(E) A built-in hand jack with a crank handle safely lifts the cylinder up to 11″ for placement. A tightening handle puts tension on the chain to secure the cylinder. Has a red powder-coated finish.

(F) Designed for larger cylinders. A flat hook secures the cylinder. Two 2″ dia. steel rollers on the front of the truck allow you to tilt the truck forward for easier loading. Has a green powder-coated finish.

Double-Cylinder Hand Trucks

Two cylinders…one trip. Safely and easily transport two cylinders at a time with these trucks. Shipped assembled.

Front-to-back trucks are ideal for narrow aisles and confined spaces. ***Steel trucks*** have welded construction and a green powder-coated finish (unless noted).

(A&B) A lip at the back of the load plate prevents cylinders from sliding off. Trucks include a chain to secure the load, a hose hook, and a tool tray. *Style A* has a 3″ high lip; *Style B* has a 4½″ high lip.

(C) A 1″ high lip at the back of the load plate prevents cylinders from sliding off. Trucks include a tool tray and a chain to secure the load.

(D) A 1″ high lip at the back of the load plate prevents cylinders from sliding off. Truck includes a chain to secure the load and a lockable tool box.

(E) A 1″ high lip at the back of the load plate prevents cylinders from sliding off. Truck includes a chain to secure the load, a 62″ long handle with 3″ ID tow ring, and a lockable tool box. Max. tow speed is 5 mph.

(F) Raised containment rings on the load plate and a steel bar on the frame secure the load. Truck has a 61″ long handle with a 3″ ID ring for lifting or for towing up to 5 mph. The tow bar can be secured in the upright position for lifting.

(G) Rear legs with swivel casters provide added stability and better mobility. Legs fold up for compact storage. Quick-tight straps secure the load. *Optional tool tray* is 19⅞″ Lg.×5″ Wd.×5″ Ht. *Optional locking posts* fit into slots on the frame of the truck and over the collar of 7″ and 10″ cylinders for additional securement.

(H) Truck is lightweight and resists weather, corrosion, and sparks. Color is black. A chain secures the load.

(J) The trucks include two chains to secure each cylinder, two hose hooks, and a tool tray.

(K) The load plate has a 4¼″ floor clearance for easier moving over obstructions. Includes one chain to secure each cylinder and a removable tool tray.

Steel Six-Cylinder and Eight-Cylinder Trucks

Eight-Cylinder Truck

Wheel multiple cylinders at a time right to where you need them. A chain on each side of the truck secures the cylinders during transport. Trucks have welded construction, an orange enamel finish, and roll on two rigid and two swivel casters with phenolic wheels. Shipped assembled.

Six-cylinder truck has a floor lock to keep the truck stationary during loading and unloading.

Eight-cylinder truck has a 10″ deep fold-down ramp for smooth loading and unloading. The two swivel casters have a side wheel brake.

Pail Dollies

Take the work out of moving heavy pails—wheel them around on a dolly.

(A&B) Have durable welded 10- and 11-ga. steel construction and an orange enamel finish. Dollies roll on four swivel casters with polypropylene wheels. Shipped assembled.

Style A has a cross-brace deck. *Style B* has a solid deck.

(C) Made of chemical-resistant polypropylene and has a cross-brace deck. It rolls on five twin-wheel, friction-grip stem swivel casters with nylon wheels. The wheels are mounted outside of the deck for added stability. Color is beige. Casters must be installed.

Cross-Brace Deck Drum Dollies

H

J

K

L

M

Make transporting 30-, 55-, and 85-gal. drums less of a chore. All dollies have welded construction and roll on four swivel casters (unless noted). Shipped assembled.

Casters mounted outside the deck offer increased stability.

(H) A foot-operated tilter locks the drum at a 10° angle for easier emptying. Made of 11-ga. steel with a zinc-plated finish. Shipped assembled.

(J) Made of 10- and 12-ga. steel with a gray powder-coated finish (unless noted). Shipped assembled (unless noted).

(K) Five swivel casters provide maximum stability. Made of 10- and 12-ga. steel and have a gray powder-coated finish. Shipped assembled.

(L) Includes a removable 30″ long T-style handle for pulling. Made of 6-ga. steel with a gray painted finish. Shipped assembled.

(M) *Steel* are 10- and 11-ga. with an orange enamel finish. Shipped assembled.

Type 304 stainless steel have 10-ga. construction and are ideal for harsh environments. Shipped assembled.

Aluminum has lightweight yet strong ¼″ thick construction. Casters must be installed (fasteners included).

Octagonal-Frame Drum Dollies

Parallel-Brace Deck

Solid Deck with Optional Sorbent Sock

Go ahead, give them your heavy loads, these dollies can take it. All have welded steel construction and roll on four swivel casters.

Parallel-brace deck offers extra strength and provides good load distribution. Made of 14-ga. steel with a black painted finish. Shipped assembled.

Solid deck is oversized to handle overpack drums. It can accommodate a sorbent sock (sold separately) to soak up spills and leaks. Made of 1/8″ thick steel with a yellow enamel finish. Casters must be installed (fasteners included).

Square-Frame Drum and Crate Dollies

Open Deck

Solid Deck

A removable T-style handle and a square deck make these dollies easier to push, pull, and steer along walls and aisles. Dollies are capable of handling both round drums and square cartons and crates. Both roll on four swivel casters. Shipped assembled.

Open deck is 6-ga. steel with a gray painted finish and phenolic wheels. Handle is 31″ long. *Note:* Do not use with loads less than 23″ dia. or 23″ square.

Solid deck is 11-ga. steel with a blue polyester coating and a drain plug for spills and leaks. Wheels are polypropylene. Handle is 28″ long.

Max. Drum Size, gal.	Cap., lbs.	Inside Lg. × Wd.	O'all Ht.	Deck Ht.	Lip Ht.	Wheel Dia.		Each

Open-Front Drum Dolly Truck

A winning combination—an open front on the deck makes loading and unloading easier while a lip on the other three sides keeps the load from sliding off. The dolly truck can handle round drums as well as square crates and cartons. It has a removable tubular steel handle for pushing, pulling, and steering. The handle has a cable and hose holder and a 12″ Lg. × 6″ Wd. × 12″ Dp. steel tool box.

The dolly truck is 12-ga. steel with a gray enamel finish and rolls on two rigid and two swivel casters with phenolic wheels. Shipped assembled.

Max. Drum Size, gal.	Cap., lbs.	Inside Lg. × Wd.	O'all Size, Lg. × Wd. × Ht.	Deck Ht.	Lip Ht.	Wheel Dia.		Each
55	2,000	25″ × 25″	33″ × 25″ × 41″	6½″	2″	5″	2367T51	$192.52

Easy-Load Drum Dolly Trucks

Maximize stability and minimize spills. Dolly trucks have a large, open deck that sits low to the ground to slide under drums for better support and minimal tipping. A T-style tubular steel handle pivots out for pulling, locks upright for pushing, and folds in for storage. All have welded 5/16″ thick steel construction, an orange enamel finish, and roll on two axle-mounted front wheels and one center-mounted rear swivel caster. Shipped assembled.

For Drum Size, gal.	Cap., lbs.	Inside Wd. × Dp.	O'all Size, Wd. × Ht.	Deck Ht.	Lip Ht.	Wheel Type	Wheel Dia.		Each
55	1,000	27″ × 16½″	33″ × 38½″	½″	3½″	Rubber/Polypropylene	6″/3″	2642T51	$132.18
55	1,200	27″ × 16½″	33″ × 38½″	½″	3½″	Polypropylene	6″/3″	2642T52	122.37
55	1,200	27″ × 16½″	33″ × 38½″	½″	3½″	Steel	6″/3″	2642T53	147.07

Warning! **Never exceed capacities.**

Drum Trucks

All have welded construction, axle-mounted wheels, and load wedges that slide under the drum for lifting.

Two-wheel trucks are great for transporting drums over short distances. ***Four-wheel trucks*** offer better load support and take the strain off your arms and back. Ideal for heavier loads, traveling longer distances, and loading and unloading drums from pallets.

Steel trucks handle your most demanding application. ***Aluminum*** trucks are lightweight, easy to move, and spark resistant.

(A) Has a kickstand to keep the truck standing, an adjustable rim catch that clamps to the top of the drum to secure it, dual handles with grips, and an orange enamel finish.

(B) Have an upright design that keeps the trucks standing, an adjustable rim catch that clamps to the top of the drum to secure it, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. Trucks also have dual handles with grips and an orange enamel finish.

(C) Have an upright design that keeps the trucks standing, a 2″ wide strap with spring-loaded cinching buckle to secure the drum, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. The strap is 27″ high when trucks are in the upright position. Trucks also have dual handles with grips and an orange enamel finish.

(D) A curved frame creates a cradle for the drum and keeps the trucks standing. Rollers on the load wedges make it easy to load and unload drums from pallets. Trucks also have an adjustable rim catch that clamps to the top of the drum to secure it, dual handles, and an orange enamel finish.

(E) Have an upright design that keeps the trucks standing, a curved frame to cradle the drum for balanced loading and unloading, an adjustable rim catch that clamps to the top of the drum to secure it, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. Trucks also have dual handles and an orange enamel finish.

(F) Trucks are balanced to stay standing and have dual handles with grips as well as a loop handle for better control. They also have an adjustable rim catch that clamps to the top of the drum to secure it and an orange enamel finish.

(G) Have a heavy duty cradle, an upright design that keeps the trucks standing, an adjustable rim catch that clamps to the top of the drum to secure it, and a spring-loaded axle that makes it easier to tilt the trucks backwards and get them rolling. Trucks also have dual handles with grips and a red powder-coated finish.

(H) A spring-loaded rim catch automatically clamps to the top lip of the drum as the drum is tilted, eliminating the need for manual attachment and adjustment. Trucks are balanced to stay standing and have dual handles with grips as well as a loop handle for better control. *Steel trucks* have a green enamel finish.

2850T11 and 2850T13 also have a hand brake for more control on ramps and inclines.

Raise-It Drum Trucks

A

B

C

Lift, transport, and place drums without a forklift. A V-style base makes it easy to load and unload drums from pallets and platforms. All trucks are made of steel with an enamel finish.

(A) A U-shaped handle engages a gas spring and ratchet mechanism to lift, hold, and release the drum. The length of the handle provides proper leverage, and the base has built-in counterbalance for stability. Three alloy steel hooks securely hold the drum below the rim. For easy steering, the truck rolls on two front axle-mounted polypropylene wheels and two rear swivel casters with polypropylene wheels. Color is blue. Shipped unassembled.

(B) A hand-operated hydraulic pump lifts and lowers the drum while a claw-style grabber attaches to the rim of the drum for a secure hold. Dual handles provide controlled maneuverability. Truck has two front axle-mounted polypropylene wheels and a rear swivel caster with a phenolic wheel and side wheel brake to keep the truck stationary during lifting and lowering. Color is green. Shipped assembled.

(C) A dual foot-operated hydraulic pump lifts and lowers the drum while a spring-loaded clamp securely grips the rim of the drum. The legs are retractable for easier maneuvering in tight spaces. Truck has two front rigid casters and two rear swivel casters. Wheels are phenolic. A floor lock keeps the truck stationary during lifting and lowering. Color is orange. Shipped assembled.

★ Capacity shown is with legs extended. Capacity is 650 lbs. with legs retracted.

Drum Trucks/Dispensing Stands

D

E

F

G

All-in-one convenience—trucks transport, store, and allow dispensing of drums. All have steel construction.

(D) Trucks have a drum saddle with a chain and ratchet-style tightener to secure the drum. Drums can be lifted 5⅛″ to 11″ from the floor. A handle lock prevents unintentional lowering and a tilt lock keeps the drum vertical. Release the tilt lock for mixing. Trucks roll on two front axle-mounted wheels and one rear swivel caster and have a blue enamel finish. Shipped unassembled.

(E) Trucks have a hook-style grabber that attaches to the rim of the drum for a secure hold, welded steel wedges that slide under the drum for easy loading, and dual handles with grips. When in the dispensing position, rollers on the frame allow you to rotate the drum for mixing. Trucks have an orange enamel finish. Shipped assembled.

(F) Truck has a 2″ wide polyester strap with spring-loaded cinching buckle to secure the drum, extra-wide load wedges for easy loading, dual handles with grips, and a kickstand to keep the truck standing. It rolls on two axle-mounted front and two axle-mounted rear wheels and has an orange enamel finish. Shipped assembled.

(G) Corrosion-resistant Type 304 stainless steel construction makes this truck great for harsh environments and washdown applications. Its unique design allows for easy loading and unloading of drums from pallets. Forged steel load wedges slide under the drum for easy loading and a spring-loaded kickstand keeps the truck standing and adds stability during dispensing. Shipped assembled.

Spill-Containment Drum Trucks/Dispensing Stands

Lightweight yet durable, these corrosion-resistant polyethylene trucks/stands not only transport and dispense your drums, they also contain spills. A U-shaped platform with a recessed step and molded handles makes loading, unloading, and tipping to dispense easier. A 2″ wide nylon strap secures the drum. In the dispensing position, the drum is held at a slight downward angle for better flow. The spill containment reservoir has an 80-gallon capacity and two openings with ¾″ garden hose thread. Trucks/stands roll on two axle-mounted solid wheels and meet EPA 40 CFR 264.175. Shipped assembled.

Drum Dispensing Stands

Without Handle — *With One Telescoping Handle*

Also known as drum cradles, these welded steel stands are an economical way to store, mix, and drain your drums. Shipped assembled.

Stationary stands are ideal for permanent storage. ***Mobile stands*** let you move your drums right to where you need them.

(A) The frame has a skid-resistant surface to prevent sliding when loading. A drum rim catch in the base of the frame secures the drum. Stands have an orange enamel finish.

2301T5 also has a telescoping zinc-plated steel handle that increases leverage when tipping to empty the drum.

(B) The frame has a skid-resistant surface to prevent sliding when loading. A drum rim catch in the base of the frame secures the drum. Stands roll on two front axle-mounted wheels and two rear swivel casters (unless noted) for better steering. All have an orange enamel finish.

Stands with handle also have an additional drum rim catch and a telescoping zinc-plated steel handle that increases leverage when tipping to empty the drum.

(C) Dual telescoping steel handles give you extra leverage and control when tipping to empty the drum. A drum rim catch on each handle secures the drum. Stands have a green powder-coated finish and roll on two front axle-mounted wheels and two rear swivel casters for better steering.

(D) Steel load wedges slide under the drum for easy loading and cross braces with rollers let you rotate the drum for draining and mixing in the horizontal position. Dual oak handles give you extra leverage and control when tipping to empty the drum. A drum rim catch on the frame secures the drum. Stands have an orange enamel finish and roll on two front and two rear axle-mounted wheels.

■ Length is with handles in the retracted position. ● Has two rear axle-mounted wheels and is designed for use with horizontal drum cabinets.

Hydraulic Drum Handlers

Look no further if you need a drum handler that makes it easy for one person to lift, move, and dispense a full drum. Handlers have a hydraulic lift that positions the drum at the required height and a manual dispensing control that tilts the drum at the proper angle for emptying. They can also rotate the drums 360° in either direction. A drum saddle with chain and ratchet-style tightener secures the drum and a floor lock keeps the handlers stationary. All are welded steel with a blue enamel finish and roll on two front axle-mounted polyolefin wheels and two rear swivel casters with polyolefin wheels.

Hand-operated handlers have a single-action, lever-operated hydraulic lift. Shipped unassembled.

Electric handler makes lifting the drum faster and easier. Just push the button to lift and release the button to stop lifting. The hydraulic lift is powered by a 1-hp, 115-VAC, 60-Hz, single-phase, totally enclosed fan cooled (TEFC) motor with an 8-ft. long power cord and three-prong plug. Amp draw is 12.8 at full load. Load will not drop in the event of a power failure. Shipped assembled.

♦ In half-full drums contents shift, which reduces capacity.

Warning! ***Never exceed capacities. Never use to lift items over people.***

Electric Hydraulic Drum Dumpers

An electric hydraulic lift makes it quicker and easier to lift and empty drums, and a chute controls the flow of the material being dispensed to prevent splashes and spills. A clamp on each side of the chute secures the drum. Dumpers operate on a 3/4-hp, 120-VAC, 60-Hz, single-phase, totally enclosed nonventilated (TENV) motor that has an 8-ft. long power cord and three-prong plug. Amp draw is 12 at full load. All have a handheld pendant switch with an 8-ft. long coil cord and operate only when the push-buttons are engaged. A limit switch turns off the motor when the drum reaches the maximum height. Load will not drop in the event of a power failure.

Dumpers are steel with a blue enamel finish, and roll on two front axle-mounted phenolic wheels and two rear swivel casters with phenolic wheels. A screw-down floor lock keeps dumpers stationary during operation. Shipped assembled.

Hook-Mount Drum Slings

Pair up these slings with overhead lifting equipment for an efficient way to pick, lift, stack, and place steel drums.

Top-grip vertical lift slings grip the top rim of the drum for easy pick-and-place applications. ***Clamp-around vertical lift sling*** hugs the drum just below the first rib. ***Horizontal lift slings*** grab the top and bottom rims of the drum for lifting in a horizontal position. ***Adjustable slings*** lift drums in horizontal and near vertical positions.

(A) Made of 9/32″ alloy steel chain with an oblong lifting link. Spring-loaded cam-style clamps secure drum and keep a grip on the drum even when not under load.

(B) Made of one-ply, 1″ wide, yellow nylon webbing. Two steel hooks attach to the top rim. The hooks grip the drum as the sling is lifted.

(C) Made of one-ply, 2″ wide, yellow nylon webbing with a round steel lifting ring. A 1/4″ dia., 7×19 galvanized steel wire rope that's tightened and locked with a load binder secures the drum.

(D) Made of one-ply, 1″ wide, yellow nylon webbing and two steel hooks. The hooks grip the top and bottom rims of the drum as the sling is lifted.

(E) Have rigid legs with a hook at each end to secure the drum. 3401T7 has 1/2″ dia. steel legs and a steel oblong lifting link that can accommodate a 4″ wide fork. 3401T1 has 5/8″ dia. steel legs and a steel pear-shaped lifting link. 3401T6 is made of spark-resistant components. Legs are 1/2″ dia. Type 304 stainless steel and the hooks are aluminum/bronze alloy. Also has an aluminum/bronze D-shaped lifting link.

(F) Consists of 5/16″ steel chain with a steel hook at each end and two round lifting rings. Use the center ring for horizontal lifts and the other ring for near vertical lifts. Two grab links on the center ring allow you to adjust the length of the sling legs.

(G) Has one flexible 3/16″ Grade 80 alloy steel chain leg with a hook, one rigid 5/8″ dia. steel leg with a hook, and two round lifting rings. Use the center ring for horizontal lifts and the other ring for near vertical lifts.

♦ First dia. is the center lifting ring; second dia. is the ring for near vertical lifts.

Hook-Mount Top-Grip Drum Lifters

Lift your drums with confidence. Designed for use with overhead lifting equipment on closed-head drums and open-head drums with lids securely in place. Lifters grip as they pick up the drum. All are made of steel.

(H) Grippers grab the drum below the rim with equal pressure on both sides for a secure, even lift. Has a lifting eye and a blue enamel finish.

(J) Its slim profile is great for loading and unloading overpack drums and for use in tight spaces. Gripper pads grab the drum evenly on both sides below the rim and require a manual release. Has a bolt for attaching your lifting device and an orange enamel finish.

(K) Two guide handles give you ultimate drum control. A slim profile is great for loading and unloading steel overpack drums and for use in tight spaces. Gripper pads grab the drum evenly on both sides below the rim. Has a bolt for attaching your lifting device and a blue enamel finish.

(L) High-strength steel jaws put a vise-like grip on drum rims (up to 1″ deep) without damaging them. The gripping action is unaffected by greasy and oily surfaces. Lifters consist of dual-lever clamps connected by alloy steel chain with oblong lifting link. Have a gray finish.

For Drum Sizes gal.	Dia.	Cap., lbs.	For Drum Types	Lifting Eye/Bolt/Link Opening		Each

★ 85 gallon applies to steel drums only.

Warning! ***Never exceed capacities. Never use to lift items over people.***

Hook-Mount Side-Grip Drum Handlers

A

B

C

D

Here's an easy way for one person to raise, transport, tilt, and drain full drums using the hook of a crane or hoist. The saddle has a chain with ratchet tightener (unless noted) to secure the drum. Once secured, the drum can be rotated 360° in either direction. A lock on each side of the hanger frame keeps the drum vertical or horizontal during transport. Made of steel with a blue enamel finish.

Optional tilt brake holds your drum in place if chain is released. Can be used with all hand-chain dispense handlers except 3666T42.

(A) Handlers require manual tilting.

(B-D) Have a hand-chain operated geared mechanism for tilting. The hand chain has a 6-ft. operating length.

Opt. Tilt Brake ..... **3669T15** **Each** $227.50

♦ In half-full drums contents shift, which reduces capacity.

● Gripping pads with adjustment screws secure the drum.

Fork-Mount Side-Grip Drum Movers

E

F

G

H

J

Their gripping arms automatically close and lock around the drum when lifting and release when drum is set down. Locking screws clamp down on the forks to secure the movers to your forklift. All are made of steel and shipped assembled (unless noted).

(E) For proper operation, this mover can only be used with drums with a 3/16″ minimum rim depth. Shipped unassembled.

(H) Gripping arms are rubber lined for a nonslip contact surface.

♣ Capacity is for two drums.

Fork-Mount Top-Grip Drum Movers

No more hassles when moving drums in areas with little or no side clearance. Made of welded steel, movers have locking screws that clamp down on the forks to secure the movers to your forklift. The jaws automatically grip the top of the drum when lifting and release when the drum is set down. Use with closed- and open-head drums.

Optional drum protector is made of 3″ wide flexible PVC and bolts to the base of the mover to cushion and protect the drum from wear (mounting hardware included).

Note: Two-drum mover requires two protectors.

Single-Drum Mover

Two-Drum Mover

For Drum Sizes gal.	Dia.	Cap. per Drum, lbs.	For Drum Types	Fork Pockets Wd. × Ht.	Ctr.-to-Ctr.	Single Drum	Each	Two Drum	Each

■ Fork pockets are 5½″ Wd. × 2″ Ht. and 22″ center-to-center.

Warning! ***Never exceed capacities. Never use to lift items over people.***

Fork-Mount Pivoting Drum Handlers

Handlers mount to the forks on your forklift for lifting and transport, plus they pivot for manual tilting so dispensing is easier. The band clamps around the drum and is secured with a latch. The fork pockets pivot for manual tilting. Made of steel.

For Drum Sizes gal.	Dia.	Cap., lbs.	For Drum Types	Fork Pockets Wd. × Ht.	Ctr.-to-Ctr.		Each
30	18″-18½″	1,000	Ribbed Steel	5″ × 3″	26″	3419T32	$69.78
55	22″-22½″	1,000	Ribbed Steel	5″ × 3″	30″	3419T21	71.22

Fork-Mount Hand-Chain Dispense Drum Handlers

Slide handlers onto the forks on your forklift and raise, tilt, and drain drums without leaving your seat. A geared mechanism operated by a hand chain lets you tilt and drain. Hand chain has a 10-ft. operating length. Handlers also allow 360° rotation in either direction. A chain with ratchet-style tightener secures the drum (unless noted). All are made of steel.

Optional tilt brake holds your drum in place if chain is released. Can be used with all handlers except 3407T21.

	For Drum Sizes gal.	Dia.	Cap., lbs. Full Drum	Half-Full Drum ♦	For Drum Types	Fork Pockets Wd. × Ht.	Ctr.-to-Ctr.		Each

Optional 30-Gallon (18½″-19″ Dia.) Drum Adapter ..... 3407T52 Each $144.33
Optional Tilt Brake ..... 3669T15 Each $227.50

♦ In half-full drums contents shift, which reduces cap. ★ Has two chains with ratchet-style tighteners.

Fork-Mount Lifting and Towing Adapters

Convert your forklift into lifting or towing equipment. All adapters are made of steel and all lifting hooks have a latch.

(C) Single-fork hook lifting adapters have T-style locking thumb screws and a web strap to secure adapters to one fork and the forklift. 3380T25 has a rigid zinc-plated hook. 3380T26 has a swivel zinc-plated hook.

(D) Dual-fork hook lifting adapters same as *Style C* but have a swivel hook and attach to both forks.

(E) Spreader beam lifting adapters have two hooks to lift loads and L-shaped fork brackets that accommodate forks of any width. Inside height of fork brackets is 2½″. T-style thumb screws secure adapters to forks. Have a yellow enamel finish.

(F) Towing adapter has a drawbar receiver welded between the fork pockets. A chain with a grab hook and a connecting pin secures adapter to the forks. Has a yellow enamel finish. For couplers and inserts, please see pages 1281-1282.

(G) Combination lifting/towing adapter has a hook for vertical lifting and a receiver welded between the fork pockets that accepts a hitch receiver for towing applications. A chain and hook secure adapter to the forks. Has a black enamel finish. Please see page 1282 for inserts.

Cap., lbs. Hook	Receiver	Fork Pockets, Wd. × Ht.	O'all Size, Wd. × Ht.	O'all Lg.	Hook Opening		Each
(C) Single-Fork Hook Lifting Adapters

4,000	2,000	6¼″ × 2⅞″	20″ × 9″	54″	1″	5098T91	719.76

Fork Extensions

Add length to the forks for extra support of long and large loads. All are 5/16″ thick welded steel with cast steel tips and a yellow powder-coated finish. Steel loops secure them to the forks. OSHA standards require that length of extensions is 150% or less of the supporting fork length. *Note:* Extensions reduce the capacity of your forklift. Please refer to your forklift manufacturer for load capacity reductions.

Lg.	Cap./ Pair, lbs.	FOR FORK SIZE 4½″ Wd. × 2″ Ht.	Per Pair	5½″ Wd. × 2″ Ht.	Per Pair	6½″ Wd. × 2½″ Ht.	Per Pair
4′	4,000	2462T12	$222.42	2462T14	$232.88	2462T16	$268.33

7′	4,000	2462T42	277.01	2462T44	292.72	2462T46	356.60
8′	4,000	2462T52	296.27	2462T54	331.24	2462T56	391.89

Fork Bumpers

Protect your load from dents without reducing load capacity. These bumpers include black powder-coated steel brackets and red polyurethane inserts. Brackets are adhesive-backed for permanent mounting to fork uprights. Inserts slide into the brackets and provide excellent wear resistance and vibration damping. Simply replace inserts when worn.

Fits Fork Wd.	O'all Size, Wd. × Ht. × Dp.	Bumpers	Per Pair	Repl. Inserts	Per Pair
4″-5″	4″ × 24″ × 1½″	1110T1	$278.67	1110T6	$150.33
6″-8″	6″ × 24″ × 1½″	1110T3	366.67	1110T8	199.98

Warning! ***Never exceed capacities. Never use to lift items over people.***

Forklift Booms

Handle long, cumbersome loads without special equipment. All booms are made of steel with a yellow painted finish, have two forged steel swivel hooks with latch, and are labeled with capacity for each hook position. They secure to the forklift with a chain and grab hook. Fork pockets are 2½″ Ht.×7½″ Wd. × 30″ Dp. (unless noted). *Note:* Capacities are approximate and depend on the type and load capabilities of the forklift used. Check with the manufacturer of your forklift for load capabilities before using.

(A) Horizontal fixed-length boom is 8 ft. long with five hook positions spaced 12″ apart. First position is located 4 ft. from the fork pocket end.

(B) Horizontal telescoping booms adjust from 7 ft. to 12 ft. long in 12″ increments. One hook is mounted at the end of the boom. The other hook has four positions spaced 12″ apart. The first position is located 3 ft. from the fork pocket end.

(C) Vertically adjustable telescoping booms are the same as Style B, plus they have five vertical height adjustments in increments of approximately 15″ with a maximum height of 6′4″.

(D) High-reach telescoping boom is designed for tall loads where more bottom clearance is needed. Length adjusts from 4 ft. to 6 ft. in 12″ increments. Has three hook positions on the adjustable length spaced 12″ apart. The fixed section has three hook positions spaced 6″ apart. The first hook position is 4 ft. from the fork pocket end.

Capacity, lbs. at Hook Position										Fork Pockets,	Hook

★ Fork pockets are 2½″ Ht.×5½″ Wd.×24″ Dp.

Pallet Pullers

Position heavily-loaded pallets for easy forklift access. All pullers are made of steel with a powder-coated finish (unless noted). The jaws have gripping teeth. Rated capacity is based on moving pallets over smooth surfaces. *Note:* Do not use pullers for lifting.

(E) Long-arm puller has a 41½″ long T-style handle with grips and two 3″ dia. nylon wheels. A ball knob on the handle operates the low-profile, double-scissor jaws. Color is black.

(F) Single-scissor puller provides a wide jaw opening. A pull chain closes the jaws. Color is black.

(G) Double-scissor puller provides greater gripping force compared to a single-scissor puller. A pull chain closes the jaws. Color is yellow.

(H) Cam-action puller has low-profile jaws for maximum gripping strength. A welded handle allows easy positioning and removal. A pull chain closes the jaws.

Optional pull chain with grab hooks is for use with styles F, G, and H. It connects the puller's chain to a forklift. Pull chain is 20-ft. long.

Pulling Cap., lbs.	Jaw Ht.	Jaw Opening	Chain Lg.		Each

● Has a zinc-chrome finish.

Pallet Truck Replacement Parts

Reduce downtime—we offer the most common replacement parts for the most popular pallet trucks.

Wheel kits include two load wheels and two steer wheels with all necessary bearings, axles, and hardware.

Seal kits include all U-cups, scrapers, seals, washers, and O-rings needed to maintain smooth operation.

Also Available: Other replacement parts. Please ask for 2641T999 and specify truck manufacturer, model number, and part required.

Pallet Trucks

A

Before selecting a pallet truck, determine the weight of your load as well as the size and style of your pallets. The most commonly used pallets measure 48″ Lg. × 40″ Wd.

For pallets 26″ to 32″ wide, use a pallet truck with an outside fork spread of 20½″.

For pallets 33″ to 40″ wide, use a pallet truck with an outside fork spread of 27″.

For pallets 41″ to 48″ wide, use a pallet truck with an outside fork spread of 33″.

B&C

All trucks have a hydraulic pump, welded-steel frame, and forks with cutouts for the load wheels. The handle has a three-position hand control (raise, lower, and neutral). A relief valve prevents pressure build-up to provide overload protection.

(A-G) Trucks for Two-Side Pallets

Two-side pallets allow fork entry at each width end.

(A) Standard trucks have tapered forks with entry and exit rollers. Steer and load wheels are polyurethane. Trucks have a gray and blue powder-coated finish.

(B) Premium trucks combine a high-performance pump and a reinforced frame for dependability and long service life. All have rounded forks with entry glides and exit rollers. Steer and load wheels are nylon (unless noted). Trucks have a yellow and black powder-coated finish.

(C) Heavy duty truck is for high-capacity applications. It has rounded forks with entry glides and exit rollers. Steer and load wheels are steel. Truck has a yellow and black powder-coated finish.

(D) Low-profile trucks have a lower fork height. All have rounded forks with entry glides and exit rollers. Steer wheels are nylon; load wheels are steel. Trucks have a yellow and black powder-coated finish.

(E) Easy-start truck gets your load moving with minimal effort. As you pump the handle the steer wheels start rotating and accelerate the truck. A hand grip directs the acceleration so the truck starts easily whether you are pushing or pulling. Truck also has precision steering and rounded forks with entry and exit rollers. Steer and load wheels are polyurethane. Truck has a yellow and black powder-coated finish.

(F) Corrosion-resistant truck has a galvanized frame, stainless steel components, and a specially-designed pump that stands up to harsh environments. It has rounded forks with entry glides and exit rollers. Steer and load wheels are nylon.

(G) Type 304 stainless steel truck offers maximum corrosion resistance for the most demanding environments. Truck has rounded forks with entry and exit rollers and a polished finish. Steer and load wheels are nylon.

Low-Profile Truck for Four-Side Pallets

★ Steer and load wheels are steel.

E

(H) Truck for Four-Side Pallets

Four-side pallets allow fork entry at each width end as well as each length end.

(H) Low-profile truck has lower fork height. To prevent improper loading, truck has rounded forks with pallet stops that restrict entry to adjoining pallets. It has nylon steer wheels and steel load wheels. Truck has a yellow and black powder-coated finish.

F&G

Battery-Powered Pallet Trucks

No more struggling to move a load—these trucks require only minimal effort to start and stop, which makes them more ergonomic and efficient than manual pallet trucks.

A hydraulic pump raises and lowers the rounded forks at the touch of a button while a variable-speed throttle controls forward and reverse speed. An automatic brake stops the truck when the motor stops. Trucks also have a safety button that automatically reverses the direction of travel if the truck comes in contact with the operator.

Trucks include 24 VDC batteries, a charger, and a self-retracting cord with a three-prong plug. Retracted cord length is 30″; extended length is 70″. Operate for eight hours on a full charge when used intermittently. A discharge indicator lets you know when batteries need charging.

All trucks are steel with a yellow and black powder-coated finish. Steer and load wheels are polyurethane.

Note: Not for use on inclines or declines greater than 4°.

Before selecting a pallet truck, determine the weight of your load as well as the size and style of your pallets. The most commonly used pallets measure 48″ Lg.×40″ Wd.

For pallets 26″ to 32″ wide, use a pallet truck with an outside fork spread of 20″ or 25″. For pallets 33″ to 40″ wide, use a pallet truck with an outside fork spread of 26¾″.

About Load Center

Load center is measured horizontally from the back of forks or a platform. To help ensure safe and balanced lifting, the center of a balanced load should not be positioned past the load center. Also, the overall length of a balanced load should never be more than twice the load center.

Improperly Balanced Load

Load-Positioning Lift Trucks

The load-moving benefit of a pallet truck combined with the load-positioning capabilities of a lift truck. Trucks are made of steel and have polyurethane steer and load wheels. A relief valve prevents pressure build-up to provide overload protection.

Note: Use with open-bottom pallets only.

Foot-operated trucks have a single-speed hydraulic pump that raises the load 13/16″ per stroke and a lever to control lowering the forks. The steer wheels swivel for better maneuverability; one has a face wheel brake to prevent movement when using the truck as a lift table. Trucks have a black and blue enamel finish.

Hand-operated trucks have a lever on the handle to raise and lower the forks. A two-speed hydraulic pump raises the load ⅜″ per stroke. Trucks are yellow with a black handle. All have a powder-coated finish.

Lift-and-Tilt Lift Truck

Look no further if you need a truck that not only moves your load, but will also lift and tilt your pallets and containers for better load positioning.

This steel truck has two hand-operated levers; one to raise and lower the forks and one to tilt the forks. The dual-position hydraulic pump raises the load 7/16″ per stroke as well as tilts the forks up to 90°. Truck has a yellow and black powder-coated finish. Steer and load wheels are polyurethane.

Note: Use with open-bottom pallets only.

Foot-Operated Lift Trucks

1&4

2

3&5

6

A foot-operated lever and a single-speed hydraulic pump allow you to raise and lower the forks or platform with less effort. Trucks are made of steel and roll on polyurethane wheels (unless noted).

(1&2) Trucks with Adjustable-Width Forks— *Style 1* raises the load ¾″ per stroke. Base has two rear rubber-tread wheels and two front swivel casters. A foot-operated wheel lock on the rear wheels keeps the truck stationary. *Style 2* raises the load 1″ per stroke. Base has two rear swivel casters with a face wheel brake and two front wheels.

(3) Trucks with Adjustable-Width Forks and Straddle Base— Have a greater distance between the base legs for easier access to loads on pallets. They raise the load 1⅛″ per stroke. Base has two rear swivel casters and two front wheels. Wheels are phenolic. A floor lock keeps trucks stationary.

(4&5) Trucks with Platform— *Style 4* is the same as *Style 1*, but has a platform with 6″ high backplate in place of the forks. *Style 5* are the same as *Style 3*, but have a platform with 11¼″ high backplate in place of the forks. Wheels are phenolic.

(6) Truck with Platform and Hand-Truck Base— Picks up, moves, and positions loads like a conventional hand truck. It raises the load ¾″ per stroke. Rolls on two rear rubber-tread wheels and has a tapered platform with 6″ high backplate. A foot-operated wheel lock keeps it stationary.

Battery-Powered Lift Trucks

7

8

9

The hydraulic pump raises and lowers the forks or platform 5″ per second when fully loaded. The pump is powered by a sealed, maintenance-free, rechargeable 12 VDC battery. The built-in charger has an LED charge indicator and a 6-ft. long power cord with three-prong plug. It fully charges the battery in 5-10 hours. The push-button control has a self-retracting cord. Retracted length is 26½″; extended length is 7 ft. Trucks are steel and have phenolic wheels (unless noted). A floor lock keeps the trucks stationary. Meet ASME B56.10.

(7) Trucks with adjustable-width forks and straddle base have a greater distance between the base legs for easier access to loads on pallets. The base has two rear swivel casters with polyurethane wheels and two front polyurethane wheels.

2814T13 also has adjustable-width base legs and a telescoping mast. Overall height with mast fully extended is 12′5″.

(8) Trucks with adjustable-width forks and counterweight base have short legs on the base for closer access to the load. The base has two rear swivel casters and two front wheels. A counterweight set (sold separately) is required.

(9) Trucks with platform have a narrow width to fit in tight spaces. The base has two rear swivel casters and two front wheels.

Winch-Operated Lift Trucks

1

2

3

4

5

Turn the winch handle to raise and lower the forks or platform approximately 1″ per handle rotation. A brake keeps the load in place.

(1&2) Trucks with reversible forks allow you to invert the forks and gain additional lifting height. The base has two rear thermoplastic rubber (TPR) wheels and two front dual-wheel swivel casters with rubber-tread wheels. Trucks are steel and aluminum.

Style 2 also have adjustable-width base legs to better straddle pallets and other items for easier access to the load.

(3) Trucks with reversible forks and counterweight base have shorter base legs for closer access to the load. Forks can be inverted for additional lifting height. Base has two rear swivel casters with polyurethane wheels and a side wheel brake and two front polyurethane wheels. Made of steel and aluminum.

(4) Truck with platform has two rear swivel casters with phenolic wheels and two front phenolic wheels. A floor lock keeps the truck stationary and a safety catch holds the platform in place if the winch fails. Made of steel.

(5) Truck with low-profile platform allows you to get your load on the platform with minimal manual lifting. The platform has a 2″ high lip on two sides to keep the load from sliding off. The base has two rear rubber-tread wheels and two front cast iron wheels. Made of steel.

Winch-Operated Mast-Style Lift Trucks

6

7

8

9

Choose from masts with multiple sections and masts that telescope to reach the desired height. Turn the winch handle to raise and lower the forks. A brake holds the load in place.

(6) Trucks with Sectional Mast and Outriggers— Have a single-speed winch with dual handles to move the load 1⅜″ per handle rotation. Rear folding outriggers with leveling feet and four swivel casters with rubber wheels and a side wheel brake provide added stability. Trucks are steel. UL listed.

9714T11 has two extra mast sections. The base also has two rear never-go-flat (semipneumatic) wheels for easier transport over uneven surfaces. Overall width with outriggers is 6′9″. 9714T12 has three extra mast sections. Base also has front outriggers. Overall width with outriggers is 6 feet.

(7-9) Trucks with Telescoping Mast— Roll through doorways in the upright position. A standard winch moves the load 1⅜″ per handle rotation. The base has four swivel casters with polyurethane wheels. Rear casters have a side wheel brake and swivel lock. Mast is aluminum; base is steel.

Style 8 also has rear outriggers with four swivel casters with polyurethane wheels for added stability. Overall width with outriggers is 6′4½″.

Style 9 also have adjustable-width base legs to better straddle pallets and other items for easier access to the load.

★ Based on the number of mast sections used or the amount of telescoping.

Warning! **Never exceed capacities. Never use to lift people.**

Foot-Operated Mobile Lift Tables

A

Move these tables where you need them and raise your work to a comfortable height. All tables have a foot-operated hydraulic pump to get loads to the desired height. They roll on two rigid and two swivel casters (unless noted). All tables are made of welded steel.

(A) Light Duty Lift Tables

Tables have a handle-mounted lever for controlled lowering. Casters have rubber-tread wheels (unless noted). A floor lock keeps the tables stationary (unless noted).

5014T15 has a relief valve that prevents pressure build-up for overload protection. A total lock on one swivel caster brakes the wheel and locks the swivel in one operation.

Cap., lbs.	Tabletop Size, Lg. × Wd.	Height Min.	Height Max.	Elevation per Stroke	Handle Height	Tabletop Gauge	Wheel Dia.		Each
330	27½″ × 17¾″	8⅜″	28¾″	1 5/16″	31 5/16″	14	4″	5014T15★	$675.50

★ Does not have a floor lock. ● Casters have polyurethane wheels.

B

(B) Medium Duty Lift Tables

A handle-mounted lever provides controlled lowering. Wheels are phenolic. A floor lock keeps the tables stationary. Meet ANSI MH 29.1.

Cap., lbs.	Tabletop Size, Lg. × Wd.	Height Min.	Height Max.	Elevation per Stroke	Handle Height	Tabletop Gauge	Wheel Dia.		Each
600	32″ × 20″	10″	33″	1″	35 7/16″	7	5″	2791T22	$945.00

2,000	30″ Dia.	27″	45″	⅜″	3	5″	2777T35	2,093.46

Warning! ***Never exceed capacities. Never use to lift people.***

Hand-Operated Mobile Lift Tables

Four locking threaded posts and a two-speed crankshaft raise and lower the tabletop for precise positioning. The removable handle can be operated from either side of the table. Two rigid and two swivel casters provide mobility, and a floor lock keeps the tables stationary. Tables are made of welded steel. Meet ANSI MH 29.1.

Polyurethane wheels are smooth rolling and nonmarking. ***Cast-iron wheels*** combine strength and durability with abrasion and heat resistance.

Cap., lbs.	Tabletop Size, Lg.×Wd.	Height Min.	Height Max.	Elevation per Stroke	Tabletop Gauge	Wheel Dia.	With Polyurethane Wheels	Each	With Cast-Iron Wheels	Each
2,000	36″×24″	24″	42″	1/8″/1/4″	7	5″	2847T2	$1,039.03	2847T1	$1,150.23

Hand-Operated Mobile Lift-and-Tilt Table

Turn the hand wheels to lift your load and tilt it up to 30° to a more ergonomic angle. A 3″ high lip on the end supports your load when the tabletop is tilted. Rolls on four swivel casters with polyurethane wheels. Two casters have a total lock that brakes the wheel and locks the swivel in one operation to keep the table stationary. Table is welded steel.

Cap., lbs.	Tabletop Size, Lg.×Wd.	Height Min.	Height Max.	Elevation per Stroke	Tabletop Gauge	Wheel Dia.	Each
300	24″×24″	31 1/2″	42″	3/16″	12	3 1/2″	27955T4 $604.64

Battery-Powered Mobile Lift Tables

Simply push a button and the hydraulic pump raises and lowers the load to the desired height. Tables run on a motor powered by a sealed, maintenance-free, rechargeable 12 VDC battery. The built-in charger has a 22″ long power cord with three-prong plug. It fully charges the battery in 6-8 hours. The NEMA 1 (for indoor use) push-button hand control has a self-retracting cord. Tables are welded steel and roll on two rigid and two swivel casters. A floor lock keeps the tables stationary. Meet ANSI MH 29.1.

(A) Scissor Style

Tables have a 5-amp battery charger and phenolic wheels. Cord length is 30″ retracted; 8-ft. extended.

Cap., lbs.	Tabletop Size, Lg.×Wd.	Height Min.	Height Max.	Elevation Speed, in./sec.	Duty Rating, cycles/hr.	Handle Height	Tabletop Gauge	Wheel Dia.	Each

Foot-Operated Stationary Lift Tables

Make repetitive lifting and positioning less of a chore. All have a foot-operated lever and hydraulic pump to raise the load and a hand-operated knob for controlled lowering. Made of welded steel with a compact design so they fit in confined spaces. Meet ANSI MH 29.1.

Lift table skirts protect the working parts of the table from dust, dirt, and debris. Made of fabric and include PVC strips for mounting skirt to the outside edge of the tabletop. Color is black and yellow.

Lift Table Skirt

Cap., lbs.	Tabletop Size, Lg.×Wd.	Height Min.	Height Max.	Elevation per Stroke	Tabletop Gauge	Lift Tables	Each	Lift Table Skirts	Each

Air-Powered Stationary Lift Tables

A hydraulic pump and an external-mount, air-driven motor that runs on 40 psi does the work for you. Just push the foot-operated control to raise and lower the tabletop. All have a 1/4″ NPT female air connection and include a 6-ft. long hydraulic hose. Made of welded steel with a compact design so they fit in confined spaces. Meet ANSI MH 29.1.

Lift table skirts protect the working parts of the table from dust, dirt, and debris. Made of fabric and include PVC strips for mounting to the outside edge of the tabletop. Color is black and yellow.

Lift Table Skirt

Air-Lift Tables

Keep it simple—no hydraulics, motors, or pumps to maintain and no electrical connection required. Durable air bags provide consistent and smooth raising and lowering of these tables. Tables are steel and operate on 15 cfm at 80 psi. A relief valve prevents pressure build-up to provide overload protection.

Lift table skirts protect the working parts of the table from dust, dirt, and debris. They are made of fabric. Color is black and yellow.

Lift Table Skirt

With Tabletop and Twin Air Bags

Tables with Tabletop

Tables come ready to operate. They have a pedestal-mount hand control to raise and lower the load. 99295T11 has a single air bag; 99295T13 has twin air bags.

Lift table skirts include PVC strips for mounting to the outside edge of the tabletop.

Cap., lbs.	Tabletop Size, Lg.×Wd.	Height Min.	Height Max.	Tabletop Gauge	Air Inlet, NPT Female	Lift Tables	Each	Lift Table Skirts	Each
2,000	48″×48″	8″	32″	3	¼″	99295T11	$2,749.09	3740T51	$657.96
4,000	48″×48″	8″	32″	3	¼″	99295T13	3,388.64	3740T51	657.96

Tables with Frame Top

First, choose your table, then choose the type of control and top (both sold separately) that best suit your application. All tables have a single air bag.

Controls include a 12-ft. long air hose.

Tabletop is 36″ Lg.×48″ Wd.×¼″ Ht.

Rotating-top platform allows easy access to the load during loading and unloading. Made of steel. Includes a plate and rotating module. Plate measures 36″ Lg.×48″ Ht.×½″ Ht. Diameter of rotating module is 14 11/16″.

Lift table skirts include hook and loop material for mounting to the frame top.

With Frame Top and Pedestal-Mount Hand Control

Cap., lbs.	Frame Top Size, Lg.×Wd.	Height Min.	Height Max.	Frame Top Gauge	Air Inlet, NPT Female	Lift Tables	Each	Lift Table Skirts	Each
1,000	35½″×47″	7″	32″	3	½″	9409T1	$2,297.06	9409T9	$523.68

Foot Control	9409T6	378.46

Tops		Each
Tabletop	9409T8	$384.62
Rotating-Top Platform	9409T4	1,332.35

Pallet Stands and Turntables

Pallet stand is made of welded steel and has a 42″ Lg.×40″ Wd. frame top. Height is manually adjustable from lowered height of 10″ up to 20¼″, 30½″, and 35¼″. Capacity is 5,000 lbs.

23835T6 ..... Each $576.97

Pallet Stand

Open-ring turntables are steel and have evenly spaced roller bearings so the ring turns smoothly. They are 2″ Ht.×40″ Dia. Use on floors, work benches, and lift tables as well as the pallet stand listed above.

Cap., lbs.		Each
2,000	8771T42	$351.08
4,000	8771T44	411.05
6,000	8771T46●	465.09

● Do not exceed stand capacity.

Open-Ring Turntable

Pallet stand with open-ring turntable combines the pallet stand (listed above) with the 4,000-lb. capacity open-ring turntable (listed above) for a ready-to-use stand. Height adjusts from lowered height of 12¼″ up to 22½″, 32¾″, and 37½″.

23835T8 ..... Each $987.31

Low-profile turntable is designed for floor use. It has a tapered ramp around the perimeter for easy 360° loading and unloading with pallet and lift trucks. Made of steel. Turntable is ⅞″ Ht.×43⅜″ Dia. Capacity is 4,000 lbs.

2695T2 ..... Each $950.30

Low-Profile Turntable

Spring-Actuated Auto-Leveling Pallet Positioner

Use one, or a combination of the three included springs to automatically maintain a convenient ergonomic working height based on your load. An integral damper provides smooth and gradual raising and lowering without bounce. Positioner is made of steel. The base is 36¼″ Lg.×36⅝″ Wd. and has fork pockets for moving the positioner with a forklift.

Capacity, lbs. Minimum	Capacity, lbs. Maximum	Height Minimum	Height Maximum	Turntable Dia.		Each
400	4,500	9½″	27¾″	43⅝″	2914T11	$1,904.76

Air-Actuated Auto-Leveling Pallet Positioners

Keep your work at a convenient height—a two-ply, reinforced-rubber air-stroke actuator automatically adjusts the height of the turntable. The turntable provides easy pallet rotation to eliminate reaching.

Setup requires a maximum of 60 psi of air, but is not needed for operation. A three-position knob allows capacity adjustments while a relief valve prevents pressure build-up to provide overload protection.

Positioners are made of steel. The base is 49″ Lg.×24 5/16″ Wd. and has fork pockets for moving with a forklift. Inlet is a tank valve and includes a ¼″ NPT female chuck. Meet ANSI MH 29.1.

Capacity, lbs. Minimum	Capacity, lbs. Maximum	Height♦ Minimum	Height♦ Maximum	Turntable Dia.		Each
250	4,000	10½″	30½″	43″	2883T7	$2,412.33

♦ Platform height varies based on load and air pressure.

Warning! ***Never exceed capacities. Never use to lift people.***

About Dock Levelers, Dockboards, and Dock Plates

Height Differential— The difference between the height of your loading dock and the height of your truck bed. The larger the height differential, the longer your dockboard or dock plate should be.

Use dock levelers, dockboards, and dock plates to bridge gaps between loading docks and trucks that are loading and unloading cargo. There are three factors to consider when making your selection:

To calculate height differential, subtract the height of your dock from the height of the truck bed (typically 55″ for most semi-trailers and 59″ for refrigerated trailers and container trailers).

Width— Your leveler, dockboard, or dock plate should be 12″ to 18″ wider than your forklift or pallets (whichever is wider). Wider dockboards and dock plates also offer greater maneuverability when placing material inside the trailer.

Capacity— The weight of the load plus the weight of your loading equipment (hand truck, forklift, lift truck, etc.). Load capacities shown are for a single-shift operation. For multiple shifts, choose a board with a capacity 5,000 lbs. higher than your actual expected loads.

Dock Levelers

Standard

Permanently attach levelers to bridge the gap between the edge of your dock and the truck you're loading or unloading. For use with a forklift, pallet, or hand truck.

Each leveler has a steel deck plate; a hinged, steel lip plate; and two 13″ Lg. × 12″ Wd. × 4″ Thick. rubber bumpers that are attached to steel bumper blocks. Dual extension springs act as a counterbalance to aid the leveler as it mechanically lifts the lip plate onto the truck bed; the springs return the lip plate to its original position when the truck pulls away. The deck plate and lip plate have a diamond-pattern tread for positive traction.

Weld levelers to a dock face with a min. 8″ wide steel channel embedded into concrete at the dock edge. If the dock edge does not have an 8″ wide steel channel, use the ***optional installation kit*** (sold separately) for bolt-on mounting.

Standard Levelers— An included lifting hook raises the lip plate. Comes with a hanger for storing the lifting hook when not in use.

Levelers with Handle— Pull the self-storing handle back about 50° and then return it to its original vertical position to lift the lip plate. It's so easy, there's no need to bend, push, or lean.

Note: To determine your load, take the gross weight of your equipment, add your typical load weight, and then multiply by two.

Plate Wd.	O'all Wd.	Max. Ht. Differential	Lg.	Load Cap., lbs.	*Standard*	Each	*With Handle*	Each

Dockboards

Aluminum/Steel with Wheels

Steel

The best portable choice for handling heavy loads, these dockboards usually require you to use a forklift to move them to your dock. For use when loading and unloading trucks using forklifts, battery-operated hand trucks, and other powered equipment. All have a tread-plate surface for positive traction, plus side curbs to lessen the chance of vehicle runoff.

Aluminum/Steel Dockboards— Have steel curbs bolted to an aluminum tread plate. The curbs are painted high-visibility yellow.

Aluminum/Steel Dockboards with Wheels— Telescoping handles with wheels allow one person to lift and position these dockboards without using a forklift. Retract the handles when the dockboard is in position. All have steel curbs bolted to an aluminum tread plate. The curbs are painted blue.

Steel Dockboards— The heaviest dockboards we offer, these are built to endure high-traffic use. Made of steel with welded-on steel side curbs. Dockboards have steel pins that you drop into any of the eight holes along their edges—this anchors the dockboard in the space between the dock and the truck. All have forklift loops that flip up for easy maneuvering and fold flat when not in use. Color is gray with blue side curbs.

Wheel-Riser Ramps

In addition to elevating trucks to dock height for easy loading and unloading, these ramps can be used to elevate the front or rear wheels of any vehicle for maintenance jobs. Ramps are made of heavy duty aluminum with a tread-plate surface for positive traction. Load capacity is 15,000 lbs. per ramp.

Walk Ramps

No dock available? Use these ramps to create a walkway for loading and unloading trucks. They're useful when using a hand truck.

Ramps are aluminum with a nonskid serrated deck and welded side curbs to prevent runoffs. There's a 9″ apron that lays on a truck bed to provide a smooth transition from truck to ramp. Furnished with two handles and two 18″ long security chains to secure ramp to truck.

Note: Not for use with pallet trucks and forklifts.

Ht. Range Min.	Max.	Usable Wd.	O'all Wd.	Lg.	Cap., lbs.		Each

6″	62″	38″	40″	16′	1,000	2167T51	1,137.85

Low-Height Walk Ramps

Make pushing your hand truck easier; use these ramps to navigate 3″ to 6″ high curbs and door thresholds. Ramps are made of aluminum with a diamond-tread surface for good traction and welded side handles for easier positioning.

Wd.	Lg.	Load Cap., lbs.		Each
30″	18″	600	2187T32	$114.71
36″	18″	700	2187T33	143.79

Make-A-Ramp Sets

Convert standard 2×8 and 2×12 lumber into all-purpose ramps. Each set contains two steel ramp tops and two rubber feet with a ribbed, nonslip surface. Furnished with assembly hardware.

For Lumber Size		Per Set
2× 8	21765T55	$43.12
2×12	21765T56	64.69

Space-Saving Ramps

You won't need a lot of storage space for these ramps. Use them to move equipment on and off trucks, and then fold or retract them for convenient carrying and storage.

Folding—Ramp is made of welded aluminum. Use alone or in a pair.

Folding with Side Curbs—Has side curbs to lessen the chance of vehicle runoff. Made of extruded aluminum alloy. Furnished in a pair; each component has an antislip surface and two handles for easier carrying.

Telescoping—Has side curbs to lessen the chance of vehicle runoff. Made of extruded aluminum alloy. Furnished in a pair; each component has an antislip surface.

Railcar Derailers

Secure the wedge clamp on these derailers to the rail head to protect people, buildings, and other freight cars from uncontrolled car movements. Derailers operate by lifting the railcar's wheel and dropping it clear of the rail. For temporary installation.

All are double-end style for derailment in both directions. They're made of ductile iron and have a safety-yellow enamel finish.

The clamp and the detachable, reflective "DERAIL" flag can be locked in position with a padlock (not included) that has a 3/8″ shackle diameter. Flag is blue with white lettering and is 48″ high.

Note: If you are unsure of your rail size, choose the derailer for 60- to 141-lb./3-ft. rails. It's the most common size range.

For Rail Size, lbs./3 ft.	Length		Each
20- 60	19¾″	**2184T1**	$539.18
60-141	32¾″	**2184T2**	576.97

Wheel Chock Anchoring Set

Set includes 15 feet of plated-steel chain, a zinc-plated-steel quick-attach link, a stainless steel wedge anchor, and a zinc-plated-steel drive anchor. Simply thread chain over the quick-attach link and close securely with hammer or vise. Chock not included.

56835T65 ..... **Per Set** $14.02

Railcar Mover

The easiest, most economical way to move railcars short distances. This mover is made of ductile and malleable iron with a hardwood handle and heat-treated steel spurs. The spurs securely grip the rail as you push downward on the handle to create the leverage needed to move the railcar. Contact points adjust to the wheel for full contact over the entire length of the stroke.

Approx. O'all Lg.		Each
66″	**2221T8**	$243.14

Railcar Wheel Chocks and Stops

Double Chocks with Flag

Wheel Stop

Use these chocks and stops on 75- to 140-lb./3-ft. rails. They're for use with railcars that have 28″ to 42″ diameter wheels. All have a painted safety-yellow enamel finish.

Warning: Not for use on railcars with smaller than 28″ or larger than 42″ wheel diameters.

Railcar Wheel Chocks

Chock the wheels on stationary railcars to keep them from moving during loading, unloading, and servicing. Chocks are made of cast steel and install quickly and easily without tools. All meet OSHA regulations 1910.110 (15), 1910.111 (13), and 1910.30 (A) (5).

Chocks ***without flag*** have an angled handle. Chocks ***with flag*** have a flag to indicate that chocks are in use. Flag is red and white with black lettering. Distance between chock and flag is 17″.

Double Chocks— A chain connects two chocks; a rubber strap hooks onto the chain and draws the chocks together.

For Rail Style	Chock Size, Lg.×Ht.	***Without Flag***	Each	***With Flag***	Each
Single Chocks—*Prevent movement in one direction*					
Exposed	7½″ × 2¾″	**2261T11**	$75.62	**2261T1**	$112.50
Paved	7½″ × 2¾″	**2261T12**	72.73	**2261T2**	120.37
Double Chocks—*Prevent forward and backward movement*					
Exposed	5″ × 2″	**2261T16**	122.22	**2261T6**	153.68
Paved	5″ × 2″	**2261T17**	118.52	**2261T7**	144.44

Railcar Wheel Stops

Simply clamp these wheel stops to your rail (no drilling required) to stop moving railcars at track ends and approaches to buildings and doors. Impact speed should not exceed 4-mph switching speed. Made of rugged ductile iron. Stops stand 13½″ above the top of the rail. Furnished in pairs.

2274T14 ..... **Per Pair** $776.67

Floor Locks

Bolt or weld these floor locks to the underside (unless noted) of carts, trucks, workbenches, and other mobile equipment to stabilize it during loading and unloading and keep it from rolling away. All floor locks have a spring-loaded base with a nonskid floor pad to keep equipment stationary. Mounting hardware not included.

Note: Floor locks are not load rated. They are designed to keep equipment in place, not for lifting it off the floor.

To find the floor lock that suits your needs, match your caster mount height to a floor lock with the same caster mount height. To determine your caster mount height, measure the distance between the floor and the top of the mounting plate (unless noted).

The *extended height* is the maximum height of the lock when the cart is unloaded (no spring compression in the lock). It should always be greater than or equal to your mounting height.

Front Pedal— Step down on the foot pedals in front to extend and retract. As you press the pedal down to extend, the retracting pedal raises into position, and vice-versa. Both pedals are easily accessible without placing your foot underneath the equipment.

Dual Release— Press the center pedal to extend; press either of the two side pedals to retract. A special compression spring requires minimal pressure to operate.

High-Clearance Dual Release— Same as the dual release floor locks above, but these provide 3⅛″ of ground clearance when retracted. This extra clearance allows equipment to move over ramps and obstructions.

Heavy Duty— These locks are well suited for the daily abuse of industrial environments. They have a pedal to extend and bars on either side to retract. A pivoting base accommodates uneven floors.

Adjustable Height— Unlike our other floor locks that are either fully extended or fully retracted, these locks extend at any point along their range of movement. One pedal extends the lock; the other retracts.

Low Profile— With a retracted height of 3⅜″, this floor lock stays out of the way when not in use so equipment moves easily on ramps and over obstructions.

Side Mount— Has a vertical mounting plate for use with equipment that doesn't permit underside mounting. One large foot pedal extends and retracts.

Selecting the Number of Floor Locks

We recommend using one floor lock on carts with two rigid and two swivel casters; two floor locks on carts with four swivel casters.

About Wheels

MEASURING GUIDE

Use the measuring guide at left to help you choose the correct size wheel. *Note:* Bore diameter equals the outside diameter of the bearing. Axle diameter equals the inside diameter of the bearing.

WHEEL CONSTRUCTION

Solid wheels have the same material throughout the entire wheel, eliminating the possibility of tread separation.
Tread on core wheels have a soft tread material mated to a hard core. This is the most common construction for caster wheels.
Pneumatic wheels are air-filled rubber tires (with or without tubes) and provide excellent shock absorption and quiet operation.
Never-go-flat wheels are also known as semi-pneumatic. They have a thin pocket of nonpressurized air that provides a cushioned ride and quiet operation without leaks or flats.
Flat-free wheels are solid polyurethane or polyurethane-filled for a quiet, cushioned ride comparable to pneumatic wheels, but will not go flat when punctured.

DUROMETER

The durometer, or hardness, of a wheel affects wheel traction, shock absorption, durability, and ease of rolling. Softer wheels are quiet, have excellent traction and shock absorption, and are easier to roll on rough surfaces. Harder wheels are very durable, have higher capacities, and are easier to roll on smooth surfaces, but can be noisy and damaging to floors. Just as Fahrenheit and Celsius are both scales to measure temperature, there are different scales used to measure hardness of nonmetals.

FOUR PRIMARY FACTORS TO CONSIDER WHEN SELECTING A WHEEL

(1) Capacity— To determine the wheel capacity required for an application, divide the total weight of your load by the number of wheels. The capacity of each wheel must be greater than or equal to the result.

(2) Floor Conditions— Different wheel materials perform better on certain flooring surfaces. In general, the harder the wheel (see durometer chart above), the less suitable it is for rough or uneven surfaces. For quieter operation, select wheels with a durometer lower than 85A. This includes some rubber, polyurethane, and pneumatic wheels. For nonmarking wheels, choose glass-filled nylon, phenolic, nylon, neoprene, elastomer, polyurethane, or nonmarking rubber. Use the table below to guide your selection.

Floor Conditions and Recommended Wheel Materials

Floor Conditions	Examples	Recommended Durometer Range	Recommended Wheel Materials
Smooth (No floor protection required)	Concrete, Steel	All	All
Smooth (Floor protection recommended)	Hardwood, Brick, Ceramic Tile, Linoleum, Asphalt	Up to 70D	Polyurethane, Rubber, Pneumatic
Rough or Uneven	Terrazzo, Dirt, Ribbed	Up to 85A	Soft Polyurethane, Rubber, Pneumatic
Carpet	_____	Greater than 95A	Phenolic, Nylon, Glass-Filled Nylon, Elastomer, Hard Rubber, Neoprene Rubber

(3) Operating Environment— Temperature, the presence of debris, and exposure to moisture and chemicals are all factors that impact the performance and life of a wheel. Use the table below to guide your selection.

Operating Environment and Recommended Wheel Materials

Operating Environment	Recommended Wheel Materials
Oil, Grease, Solvents, Mild Acids	Metal, Phenolic, Glass-Filled Nylon, Elastomer, Polyurethane, Neoprene Rubber
Mild Alkalines	Metal, Nylon, Polyurethane
High Temperature (Above +160° F)	Metal, Phenolic, Glass-Filled Nylon, Elastomer
Low Temperature (Below –20° F)	Metal, Phenolic, Glass-Filled Nylon, Elastomer, Polyurethane

(4) Rolling Effort— The force required to start a wheel rolling and keep it rolling is affected by the size of the wheel, the shape of the tread, and the type of bearings in the wheel. Usually, the larger the wheel, the more easily it rolls. Rounded treads start rolling and turn easier than flat treads. Also, maintenance-free precision ball bearings and tapered roller bearings roll easier than standard ball bearings and straight roller bearings. Plain bearings require the most force to start rolling.

BEARINGS

Plain Bore (No Bearings)— Good for light loads; the wheel bore rides directly on the axle.
Plain Bearings— A metal or plastic sleeve is pressed into the wheel bore and rests directly on the axle. Used in applications where ease of rolling is less critical. *Plastic bearings (Acetal and Celcon)* are corrosion resistant and dependable in a broad range of temperatures and conditions, including brine, steam cleaning, water, and other liquids. *Metal bearings* are made of sintered metal impregnated with oil or graphite. They're maintenance-free and commonly used with small wheels.
Straight Roller Bearings— Hardened steel rollers improve rolling while a smooth outer sleeve prevents wear of the wheel bore.
Ball Bearings— Decrease the effort required to begin rolling.
Maintenance-Free Precision Ball Bearings— The most ergonomic choice, these bearings have the least rolling resistance. Sealed design makes them completely maintenance free.
Tapered Roller Bearings— Withstand both downward and side force, making them the most effective bearings for heavy loads.

About Casters

TYPES OF CASTERS

(1) Premium (Kingpinless)— These casters have a rugged large-diameter swivel raceway designed to eliminate the need for the most vulnerable component of a caster—the kingpin. This design makes them the best-performing, most durable casters available. They stand up to shock loads (impact of a load being dropped) and the most demanding applications. Their heavy gauge steel construction and precision-machined, heat-treated swivel raceway makes them strong, while large-diameter hardened polished steel ball bearings provide smooth swiveling, reduced wear, and extended service life.

(2) One-Piece Forged Steel Mounting Plate with Kingpin— The best of the kingpin-design casters. The top plate and kingpin are machined from a single piece of forged steel resulting in a stronger, more durable caster than those with a bolt and nut or rivet kingpin. These casters feature a precision-machined upper swivel raceway for smooth swiveling and a tapered roller bearing in the lower swivel raceway that withstand shock loads (impact of a load being dropped) and side impact. Both raceways are heat treated for extended service life.

(3) Forged Steel— Strong and durable with a forged steel top plate and frame. A heavy duty bolt and nut connects the welded caster frame to the top plate. The nut allows you to adjust the tension on the swivel raceway to compensate for wear. The upper and lower swivel raceways are precision machined for smooth swiveling and have two rows of ball bearings for better load distribution and extended service life.

(4) Formed Steel Welded Frame— The caster construction with the broadest range of capacities, but with less durability than our premium and forged steel caster constructions. The top plate and frame are made of formed steel. The welded frame is connected to the top plate with either a bolt and nut or a heavy duty rivet kingpin. These casters are an economical choice for applications that are not subject to shock loads (impact of a load being dropped).

(5) One-Piece Formed Steel— The most economical caster construction, but not as durable as other constructions. An ideal choice for less critical applications requiring less movement. The frame and legs are formed from a single piece of steel without welding. The one-piece frame is connected to the formed steel top plate using a rivet.

Mounting plate drawings list length, width, bolt hole spacing, plate thickness, and mounting bolt size.

MOUNTING PLATES

For your convenience, our mounting plate drawings list length, width, bolt hole spacing, plate thickness, and mounting bolt size.

BRAKE AND LOCK OPTIONS

Swivel Lock— For straight-line travel, a hand-operated plunger prevents the caster from swiveling. The *four-position lock* will lock every 90°.

Side Wheel Brake— A foot-operated lever connected to the wheel axle compresses the caster frame against the hub to prevent rolling.

Face Wheel Brake— A foot-operated lever engages a pad against the tread of the wheel to prevent rolling. Brakes more securely than a side wheel brake.

Total Lock— With one push, a foot-operated pedal applies a face wheel brake and locks the swivel at any point along the swivel circumference.

Swivel Caster with Swivel Lock

SWIVEL BEARING TYPE

Large-Diameter Single Ball Bearings— Large-diameter hardened steel balls housed in a large-diameter, precision-machined, hardened raceway create a smooth-operating swivel that withstands the direct weight of a load plus the stress from shock loads (impact of a load being dropped), side impact, and rolling over obstructions. The best choice for the most demanding applications.

Double Tapered Roller Bearings— One set of tapered roller bearings handles outside stress from side impact and rolling over obstructions while the other set handles the stress of the load. Well-suited for heavy loads and continuous use.

Single Ball/Tapered Roller Bearings— Hardened steel balls rotate in a machined raceway for smooth swiveling under load while secondary tapered roller bearings handle the stress of side impact and rolling over obstructions.

Double Ball Bearings— The most common swivel bearing. A large-diameter upper raceway distributes the load while a smaller diameter lower raceway takes care of the swiveling. Raceways are machined in forged casters for a more precise fit; stamped in formed casters for an economical alternative to other dual-bearing swivel designs for less demanding applications.

Single Ball Bearings— A single row of steel balls housed in a formed raceway for light duty applications or for equipment that is not often moved.

Rigid Caster with Side Wheel Brake

CASTER CAPACITY

Caster capacity listed is for an individual caster. To determine what caster capacity is best for your application you must first determine how many casters are required and how much weight will be placed upon them.

To determine the caster capacity required, divide the maximum weight of your load by the number of casters for your application. Caster capacity must be greater than or equal to the result.

The capacity of the caster must be increased if it will be rolling over rough surfaces or obstructions such as expansion joints, thresholds, and floor plates, or if there is a chance of shock loads (impact of a load being dropped).

Dual-Wheel Swivel Caster with Face Wheel Brake

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Hercules Casters—3,500 to 20,000 lbs.

Single-Wheel Swivel

Dual-Wheel Swivel

- Premium large-diameter swivel raceway (kingpinless)
- Large-diameter single ball swivel bearings
- ⅜″ leg thickness

The toughest casters we carry. The precision-machined raceway not only withstands shock loads, it also offers smooth swiveling and is sealed to keep out dust and debris. Made of heavy-gauge steel with a blue painted finish. ***Dual-wheel*** casters provide better load distribution and easier turning than single-wheel casters. *Note*: Wheel width shown is for each wheel.

Also Available: Swivel and rigid casters with a face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. Please ask for 2465T888 and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Please ask for 2465T333 and specify McMaster-Carr part number.

Brute Casters—4,000 to 7,000 lbs.

Swivel

Rigid

- Premium large-diameter swivel raceway (kingpinless)
- Large-diameter single ball swivel bearings
- ⅜″ leg thickness

The precision-machined raceway on these casters withstands shock loads and provides smooth swiveling. Made of heavy-gauge steel with a blue painted finish.

For casters with the same design, but lower-capacity wheels, see the Ruffian Casters on page 1319 and the Sure-Fire Casters on page 1322.

Also Available: Swivel and rigid casters with a face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. Please ask for 23515T888 and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Please ask for 23515T333 and specify McMaster-Carr part number.

♦ Have a gray painted finish. ■ Leg thickness is ⅜″.
★ Mounting plate is ½″ thick.

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Colossus Junior Casters—5,000 to 10,000 lbs.

- One-piece forged steel mounting plate with kingpin
- Double tapered roller swivel bearings
- 3/8″ leg thickness

Less bulky than other casters with the same capacity, these are ideal in constant-use, heavy-load applications. A precision-machined raceway provides smooth swiveling. Made of steel with a yellow dichromate finish.

Also Available: Swivel and rigid casters with a face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. Please ask for 8756T888 and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Please ask for 8756T333 and specify McMaster-Carr part number.

Ruffian Casters—2,000 to 3,500 lbs.

- Premium large-diameter swivel raceway (kingpinless)
- Large-diameter single ball swivel bearings
- 3/8″ leg thickness

Same durable construction as the Brute Casters on the previous page, but with more wheel options for a variety of applications.

A precision-machined raceway provides smooth swivel action. Made of steel with a blue painted finish. For casters of the same construction, but lower-capacity wheels, see Sure-Fire Casters on page 1322.

Also Available: Swivel and rigid casters with face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. Please ask for 2293T888 (Mounting Plate 1) or 5010T888 (Mounting Plate 2) and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Ask for 2293T333 (Mounting Plate 1) or 5010T333 (Mounting Plate 2) and specify McMaster-Carr part number.

■ Has tapered roller bearings.

Alliance Casters—1,800 to 4,000 lbs.

- Premium large-diameter swivel raceway (kingpinless)
- Large-diameter single ball swivel bearings
- 5/16″ leg thickness

Like the Ruffian Casters on this page, these casters offer high capacities, but have a smaller mounting plate. Made of steel with a blue painted finish. ***Dual-wheel*** casters provide better load distribution and easier turning than single-wheel casters. *Note*: Wheel width shown is for each wheel.

Also Available: Swivel and rigid casters with a face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. For single-wheel casters ask for 22655T888 and specify the McMaster-Carr part number and desired option; for dual-wheel casters ask for 2435T888 and specify the McMaster-Carr part number and desired option.

Also Available: Replacement wheels. For single-wheel casters please ask for 22655T333 and specify McMaster-Carr part number. For dual-wheel casters please ask for 2435T333 and specify McMaster-Carr part number.

Stronghart Casters—2,000 to 3,500 lbs.

Single-Wheel Swivel

Dual-Wheel Swivel

- Forged steel with bolt and nut kingpin
- Double ball swivel bearings
- ⅜″ leg thickness

Forged construction holds up in demanding applications while two rows of ball bearings in the raceway provide better load distribution and extend service life. Made of corrosion-resistant zinc-plated steel.

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters. *Note:* Wheel width shown is for each wheel.

Also Available: Replacement wheels. For single-wheel casters please ask for 2487T333 and specify McMaster-Carr part number; for dual-wheel casters ask for 9943T333 and specify McMaster-Carr part number.

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Viking Formed Casters—1,600 to 2,000 lbs.

- Formed steel welded frame with bolt and nut kingpin
- Double ball swivel bearings
- 3/8″ leg thickness

With the same mounting plate as the Viking Forged Casters on the previous page, these casters offer a cost-effective solution for less demanding applications. Made of corrosion-resistant zinc-plated steel.

Also Available: Swivel and rigid casters with a face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. Please ask for 2771T888 and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Please ask for 2771T333 and specify McMaster-Carr part number.

Husky Casters—2,100 to 2,500 lbs.

- Formed steel welded frame with bolt and nut kingpin
- Double ball swivel bearings
- 3/8″ leg thickness

Wheels with a polypropylene core make these casters lighter than others with the same capacities. Plus, a slightly contoured tread makes them easy to turn. Made of corrosion-resistant zinc-plated steel.

Also Available: Swivel and rigid casters with a face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. Ask for 2470T888 and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Please ask for 2470T333 and specify McMaster-Carr part number.

Quiet-Ride Pneumatic-Wheel Casters—2,000 to 2,340 lbs.

- Forged steel with bolt and nut kingpin
- Double ball swivel bearings
- 1/4″ leg thickness

Reduce in-plant noise and cushion your heavy loads. Dual wheels provide better load distribution and easier turning than single-wheel casters. Rubber tires protect sensitive loads when rolling over rough and uneven surfaces. Made of corrosion-resistant zinc-plated steel. *Note:* Wheel width shown is for each wheel.

Also Available: Swivel and rigid casters with face wheel brake, and swivel casters with face wheel brake and four-position swivel lock. Please ask for 23585T888 and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Please ask for 23585T333 and specify McMaster-Carr part number.

Type 304 Stainless Steel Alliance Casters—2,000 to 2,500 lbs.

Swivel

Rigid

- Premium large-diameter swivel raceway (kingpinless)
- Large-diameter single ball swivel bearings
- ¼″ leg thickness

Stainless steel construction and ball bearings make these casters the choice for harsh environments.

Also Available: Swivel and rigid casters with a face wheel brake, and swivel casters with a face wheel brake and four-position swivel lock. Please ask for 22705T888 and specify McMaster-Carr part number and desired option.

Also Available: Replacement wheels. Please ask for 22705T333 and specify McMaster-Carr part number.

Kingston Casters—750 to 1,500 lbs.

- One-piece forged steel mounting plate with kingpin
- ¼″ leg thick.
- Single ball/tapered roller swivel bearings

Single ball bearings along with tapered roller bearings in the swivel provide smooth swiveling and withstand rolling over obstructions as well as side impact. Casters are steel with a red painted finish. For casters with the same design, but with a smaller mounting plate, see the Kingston Junior Casters on the following page.

Swivel and rigid casters with brake and with phenolic or cast iron wheels are available with a side wheel brake. Swivel casters are also available with a side wheel brake with a four-position swivel lock. **To Order:** Swivel casters with brake option, please specify right or left side brake.

Swivel and rigid casters with brake and with polyurethane on iron wheels are available with a face wheel brake. Swivel casters are also available with a face wheel brake with four-position swivel lock.

Also Available: Replacement wheels. Please ask for 2508T333 and specify the McMaster-Carr part number.

Kingston Junior Casters—500 to 2,400 lbs.

Single-Wheel with Straight Roller Bearings Swivel with Right Side Brake

Dual-Wheel Swivel

- One-piece forged steel mounting plate with kingpin
- ¼″ leg thickness
- Single ball/tapered roller swivel bearings

Same as the Kingston Casters on the previous page, but with a smaller mounting plate. Bearings in the swivel provide smooth movement, and withstand rolling over obstructions and side impact. Made of steel with a gray painted finish. ***Dual-wheel*** casters provide better load distribution and easier turning than single-wheel casters. *Note:* Wheel width shown is for each wheel.

Swivel casters with brake are available with a right or left side brake (unless noted). Swivel casters with brake and lock are available with a right or left side brake with a four-position swivel lock (unless noted). **To Order:** Please specify right or left side brake.

Rigid casters with brake are available with a side brake (unless noted).

Also Available: Replacement wheels. Please ask for 2431T333 and specify the McMaster-Carr part number.

Ajax Casters—680 to 1,200 lbs.

Swivel

Rigid

- Forged steel with bolt and nut kingpin
- ⅜″ leg thickness
- Double ball swivel bearings

The heavy duty forged frame on these casters withstands more demanding applications than formed steel casters. Made of corrosion-resistant zinc-plated steel.

Also Available: Swivel and rigid casters with face wheel brake, and swivel casters with face wheel brake and four-position swivel lock. Please ask for 30195T88 and specify McMaster-Carr part number and desired brake option.

Also Available: Replacement wheels. Please ask for 30195T333 and specify McMaster-Carr part number.

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Spartan Forged Casters—700 to 1,500 lbs.

- Forged steel with bolt and nut kingpin
- Double ball swivel bearings
- 1/4″ leg thickness

Same design as the Slugger Forged Casters on the previous page, but with a smaller mounting plate and mounting hole pattern. Casters withstand shock loads and rolling over obstructions. Made of corrosion-resistant zinc-plated steel.

Also Available: Replacement wheels. Please ask for 2856T333 and specify McMaster-Carr part number.

★ Not available with neoprene seals.

Optional Weld-On Fast-Mount Bracket—Permits easy removal and replacement of casters.

49935T12 ..... $11.92

Trojan Casters—700 to 1,500 lbs. CAD

Swivel

Rigid

- Formed steel welded frame with bolt and nut kingpin
- Double ball swivel bearings
- ¼″ leg thickness

Identical in design to the Slugger Formed Casters on the previous page, but with a different mounting plate design. Made of corrosion-resistant zinc-plated steel. ***Swivel casters with neoprene seals*** prevent contamination of the swivel bearing to extend service life.

Also Available: Replacement wheels. Please ask for 8745T333 and specify McMaster-Carr part number.

22955T36 ..... $10.60

Shock-Absorbing Casters—800 to 1,000 lbs.

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- ¼″ leg thickness

Dual shock-absorbing, heat-treated springs in these casters allow you to take on bumpy surfaces and obstructions while minimizing shock to the load. All have seals on the swivel and debris guards on the wheel to protect the bearings from contamination and extend service life. Made of corrosion-resistant zinc-plated steel.

Roll-and-Set Leveling Casters—825 to 1,650 lbs.

With Thumbwheel Adjustment

Leveling Pad Extended

- Premium large-diameter swivel raceway (kingpinless)
- Premium single ball swivel bearings

A leveling pad lifts the wheel of these casters off the ground to hold your mobile equipment in place, plus it can be adjusted to compensate for uneven surfaces. Choose from thumbwheel and metric nut pad adjustment. For a compatible wrench for casters with an adjustment nut, see pages 2770-2771. Caster frame is cast aluminum with a beige powder-coated finish; mounting plate is steel. Mounting hardware is included.

Cushion-Tough Pneumatic-Wheel Casters—1,220 to 1,655 lbs.

- One-piece forged steel mounting plate with kingpin
- Single ball/tapered roller swivel bearings
- 28035T11 *and T21*: 3/8″ leg thickness
- 28035T12 *and T22*: 1/2″ leg thickness

Pneumatic wheels with bolted rims make these the quietest, most shock-absorbing casters around. Ideal for transporting both heavy and fragile loads. Made of steel with a red painted finish.

Also Available: Replacement wheels. Please ask for 28035T333 and specify McMaster-Carr part number.

Type 303 Stainless Steel Washdown Casters—800 to 1,000 lbs.

Swivel

Rigid

- Formed steel welded frame with rivet kingpin
- Double ball swivel bearings with neoprene seals
- 3/16″ leg thickness
- NSF certified

With no components to rust, these casters are an excellent choice for washdown applications and corrosive environments.

Also Available: Replacement wheels. Please ask for 22595T333 and specify McMaster-Carr part number.

4″ and 5″ Dia.	2422T98	$16.72	6″ and 8″ Dia.	2422T99	$16.72

Ezy-Roll Casters—300 to 550 lbs.

Swivel

Rigid

- Formed steel welded frame with rivet kingpin
- Double ball swivel bearings
- 3/16″ leg thickness
- NSF certified

Rubber wheels provide a cushioned ride. Casters are made of corrosion-resistant zinc-plated steel. For casters with the same design, but with higher-capacity wheels, see the Patriot Casters on page 1327.

Gray rubber wheels are nonmarking and have a curved tread that makes them easier to get rolling and swivel.

Optional Side Wheel Brake for Swivel Casters—Field installable.

2531T75 ..... $12.75

Glide-Light Casters—350 to 550 lbs.

Swivel

Rigid

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- 3/16″ leg thickness
- NSF certified

Lightweight wheels mean less weight to get rolling. All casters are made of corrosion-resistant zinc-plated steel and have nonmarking wheels. For casters with the same design, but with higher-capacity wheels, see the Falcon Casters on page 1327.

Gray rubber wheels are extra soft to cushion your load, plus they have a curved tread so they are easier to get rolling.

Optional Total Lock—Brakes the wheel with a face wheel brake and locks the swivel in one operation. Field installable.

20115T91 ..... $13.92

Debris-Guard Junior Casters—350 lbs.

Swivel

Rigid

- Formed steel welded frame with bolt and nut kingpin
- Double ball swivel bearings
- ¼″ leg thickness

Neoprene seals on the swivel and debris guards on the wheel keep bearings free from contaminants for longer service life. Same as the Debris-Guard Casters on page 1327, but with lower-capacity wheels. Made of corrosion-resistant zinc-plated steel.

Wheel Dia. × Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Rigid

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Food-Service Casters—500 to 750 lbs.

Swivel

Rigid

- Formed steel welded frame with rivet kingpin
- Double ball swivel bearings
- ¼″ leg thickness
- NSF certified

Ideal for food-service applications, these casters are easy to clean in order to reduce waste buildup. Made of corrosion-resistant zinc-plated steel. ***Antimicrobial wheels*** prevent formation and growth of bacteria, mold, and fungus. ***Phenolic wheels*** are BISSC (Baking Industry Sanitation Standards Committee) certified.

Trash Container Casters—650 to 675 lbs.

Swivel

Rigid

- One-piece formed steel with rivet kingpin
- Single ball swivel bearings
- 5/32″ leg thickness

A more vertical profile allows these casters to better withstand the impact of being frequently lifted and set back down on the ground. Casters are steel with a gray epoxy-coated finish. For casters with the same design, but with higher-capacity wheels, see the Trash Container Casters on page 1328.

Wheel Dia.×Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Rigid

▲ Mounting plate is 3/16″ thick.

Optional Side Wheel Brake—For all casters. Field installable.

22955T36 ..... $10.60

Redi-Roll Casters—290 to 800 lbs.

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- 3/16″ leg thickness

An economical alternative with the same design as the Mauler Casters on page 1328, but with lower-capacity wheels. Made of steel with a gray epoxy-coated finish.

Swivel casters have a protective ring around the swivel to protect the bearings from contaminants.

22955T36 ..... $10.60

Cushion-Center Casters—440 lbs.

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- ⅛″ leg thickness

Two layers of white nylon with a layer of red rubber in the middle create nonmarking wheels that provide good shock absorption and quiet operation. Casters are made of corrosion-resistant zinc-plated steel. ***Swivel casters with total lock*** brake the wheel with a face wheel brake and lock the swivel in one operation.

Also Available: Replacement wheels. Please ask for 27115T333 and specify McMaster-Carr part number.

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Silent-Roll Casters—220 lbs.

- One-piece molded fiberglass-reinforced nylon with rivet kingpin
- Maintenance-free precision ball swivel bearings
- 3/16″ leg thickness

Maintenance-free precision ball swivel and wheel bearings make these casters the quietest available. Their soft, high-performance rubber wheels are nonmarking and provide a cushioned ride. A debris cap on the swivels and debris guards on the wheels protect the bearings from contamination for longer service life. Frame is corrosion-resistant beige fiberglass-reinforced nylon; mounting plate is steel with a yellow dichromate finish.

Blackhawk Casters—200 to 350 lbs.

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- 3/32″ leg thickness
- NSF certified

A black powder-coated finish on the mounting plate and frame draws less attention to these casters. Made of steel.

Casters with black wheels blend into the background for nearly invisible mobility.

Creston Casters—200 to 400 lbs.

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- *Swivel:* 3/32″ leg thickness
- *Rigid:* 3/16″ leg thickness
- NSF certified

General purpose casters are made of corrosion-resistant zinc-plated steel.

Swivel casters also have seals on the swivel to prevent bearing contamination for longer service life.

Swivel casters with wrap-around brake are easier to engage and have a rubber brake pad for better tread grip than a standard face brake.

Neoprene rubber wheels resist oil and mild chemicals, and have debris guards to keep wheel bearings free from contaminants for longer service life.

♦ Wheels are urethane.

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Cart-King Casters—200 to 400 lbs.

Swivel

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- 3/32″ leg thickness (unless noted)

Choose from a variety of casters for general purpose equipment and cart applications. Casters are made of corrosion-resistant zinc-plated steel.

Swivel casters with total lock brake the wheel with a face wheel brake and lock the swivel in one operation.

Single wheel casters are NSF certified (unless noted). ***Dual wheel*** casters provide better load distribution, are easier to turn, and have a higher capacity with smaller diameter wheels. *Note:* Wheel width shown is for each wheel.

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Cart-Smart Casters—200 to 600 lbs.

- One-piece formed steel
- Single ball swivel bearings (unless otherwise stated)
- 3/32″ leg thickness
- NSF certified

A variety of unique mounting plate sizes matches many common carts and dollies. All are made of corrosion-resistant zinc-plated steel. ***Swivel casters with welded center*** have a center weld that connects the frame to the mounting plate, which eliminates the need for a kingpin.

Also Available: Swivel casters with single ball swivel bearings and a side wheel brake. Please ask for 2407T888 and specify McMaster-Carr part number. Casters with a brake are not NSF certified.

★ Has single ball swivel bearings. ♦ Has nut and bolt kingpin.

High-Temperature Casters—250 to 600 lbs.

- One-piece formed steel with rivet kingpin (unless noted)
- Double ball swivel bearings
- *Mounting Plate 1:* 3/32″ leg thick.
- *Mounting Plate 2:* 1/4″ leg thick.

Designed to take the heat and keep rolling. Great for bakery applications, these casters withstand continuous use in temperatures from −20° to +475°F. All are made of corrosion-resistant zinc-plated steel and have nonmarking wheels. ***Black rubber on aluminum wheels*** also provide a cushioned ride and are quiet rolling.

■ Formed steel welded frame with rivet kingpin.

For information about wheels, casters, and mounting plates, see pages 1316-1317.

Shock-Absorbing Casters—410 to 500 lbs.

Swivel

Rigid

- Formed steel welded frame with rivet kingpin
- Double ball swivel bearings
- ¼″ leg thickness

The spring-loaded design of these casters minimizes shock to your load when taking on bumpy surfaces and obstructions. Made of corrosion-resistant zinc-plated steel. *Note:* The mount height listed is with no load. At full capacity spring compression results in ⅜″ reduction in mount height.

Quiet-Ride Forged Pneumatic-Wheel Casters—330 to 625 lbs.

Single-Wheel Swivel

Dual-Wheel Swivel

Single-Wheel Casters
- One-piece forged steel mounting plate with kingpin
- Single ball/tapered roller swivel bearings
- ¼″ leg thickness (unless noted)

Dual-Wheel Casters
- Forged steel with bolt and nut kingpin
- Double ball swivel bearings
- ¼″ leg thickness

With their extremely quiet and shock-absorbing pneumatic wheels, transporting heavy, fragile loads is no problem for these casters. ***Single-wheel casters*** are made of steel with a red painted finish. Wheels have bolted rims. ***Dual-wheel casters*** provide better load distribution and easier turning than single-wheel casters. Made of corrosion-resistant zinc-plated steel. Wheels have welded rims. *Note:* Wheel width shown is for each wheel.

Bright-Shine Casters—250 to 300 lbs.

Swivel

Rigid

Swivel with Brake

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- ⅛″ leg thickness

Chrome-plated casters have a great-looking, high-luster finish. They also withstand frequent washdowns and resist corrosion in wet environments. Neoprene rubber wheels resist oil and mild chemicals. Debris guards protect the wheel bearings. Made of nickel-chrome-plated steel. ***Swivel casters*** also have seals on the swivels to protect the bearings from contaminants for longer service life.

Optional Side Wheel Brake for Swivel Casters—Field installable.

22595T91 ..... $25.92

Roll-and-Set Leveling Casters—300 to 600 lbs.

With Thumbwheel Adjustment

With Ratchet Adjustment

Leveling Pad Extended

- Premium large-diameter swivel raceway (kingpinless)
- Double ball swivel bearings

Adjust the polyurethane leveling pad on these casters to lift the wheel off the floor and keep your equipment stationary. When you need mobility, just raise the pad out of the way. Caster frame is aluminum; mounting plate is steel.

Casters with thumbwheel adjustment are leveled by hand or with an adjustable wrench with a jaw opening greater than 13/32″. For wrenches, see pages 2761-2762. ***Casters with ratchet adjustment*** have a retractable telescoping ratchet handle for easy adjustment.

Cart-Smart Junior Casters—90 to 175 lbs.

- One-piece formed steel with rivet kingpin
- Single ball swivel bearings
- 1/16″ leg thickness (unless noted)

A variety of unique mounting plate sizes matches many common carts and dollies. All are an economical choice for equipment that is not frequently moved. Made of corrosion-resistant zinc-plated steel.

★ Leg thickness is 3/32″.

Compact Mighty-Lite Casters—90 to 150 lbs.

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- *2″ Dia. Wheels:* 1/16″ leg thickness
- *3″ Dia. Wheels:* 3/32″ leg thickness

Similar to the Cart-Smart Junior Casters on this page, but with double ball swivel bearings for smoother operation. Made of corrosion-resistant zinc-plated steel.

Conductive Casters—75 to 200 lbs.

Swivel

Swivel with Brake

- One-piece formed steel with rivet kingpin
- Double ball swivel bearings
- 3/32″ leg thickness

To eliminate static buildup, the conductive wheels on these casters have an average surface resistance of less than 10^6 ohms. Casters are made of corrosion-resistant zinc-plated steel.

■ Mounting plate is 3 3/4″ Lg. × 2 3/4″ Wd.

Type 304 Stainless Steel Casters—110 to 165 lbs.

Swivel

Rigid

- One-piece formed stainless steel with rivet kingpin
- Double ball swivel bearings
- *Swivel:* 3/32″ leg thickness
- *Rigid:* 1/8″ leg thickness

These casters offer superior corrosion resistance. A debris cap on the swivel protects the bearings from contaminants for longer service life.

Neoprene rubber wheels with plain acetal bearings are great for washdown applications.

Low-Profile Caster—60 lbs.

- One-piece formed steel with rivet kingpin
- Single ball swivel bearings
- 1/16″ leg thickness

Originally used on hotel bellmen's carts, this caster has a low mounting height for use on small appliances and light furniture with a flat base. Mounting plate and frame are brass-plated steel.

Wheel Dia. × Wd.	Mount Ht.	Cap. Ea., lbs.	Mounting Plate, Lg. × Wd.	Swivel	
Wheel with Plain Bore (No Bearings)

Dual-Wheel Leveling Casters—500 to 1,000 lbs.

Leveler Extended

- One-piece formed Type 301 stainless steel with rivet kingpin
- Double ball swivel bearings
- *500-lb. Capacity:* 1/16″ leg thickness; 1/2″-13 leveler thread size
- *1,000-lb. Capacity:* 5/64″ leg thickness; 5/8″-1 leveler thread size

Use the nut to adjust the leveler on these casters and lift the wheel off the floor to keep your equipment stationary. Dual-wheel casters provide better load distribution and easier turning than single-wheel casters. *Note:* Wheel width shown is for each wheel.

Mounting plate 2 lets you mount casters to the outer corners of carts and other equipment.

Twin-Wheel Casters—40 to 100 lbs.

Twin-wheel casters provide better load distribution and easier turning than single-wheel casters. All have a steel mounting plate. Meet BIFMA standards (unless noted). ***Swivel casters with wheel brake*** have a foot-operated brake that locks the wheel in place.

To Order: For casters with zinc-alloy hood, please specify hood finish: matte black, antique brass, bright chrome, or satin chrome.

Threaded-Stem Casters

For information about wheels and casters, see pages 1316-1317.

Add-a-Stem Casters—140 to 900 lbs.

- One-piece formed steel
- Double ball swivel bearings
- *With Plain Acetal Wheel Bearings:* 3/32″ leg thickness
- *With Straight Roller Wheel Bearings:* 5/32″ leg thickness

A center hole in these casters allows you to insert any length bolt needed for your application. Casters are made of corrosion-resistant zinc-plated steel. For bolts, please see page 3144.

Premium Threaded-Stem Casters—240 to 300 lbs.

- One-piece formed steel
- Double ball swivel bearings
- 1/8″ leg thickness

For extended service life, all have a heavy-gauge frame and a debris cap on the swivel to protect the bearings from contaminants. ***Type 304 stainless steel*** offers superior corrosion resistance.

Also Available: Casters with a total lock that brakes the wheel with a face wheel brake and locks the swivel in one operation. Please ask for 2437T888 and specify the McMaster-Carr part number.

For information about wheels and casters, see pages 1316-1317.

Threaded-Stem Casters—70 to 350 lbs.

Swivel

Swivel with Total Lock

- One-piece formed steel
- Double ball swivel bearings
- Plain bore wheel (no bearings), unless noted

A good value in threaded-stem casters. All are made of steel with a corrosion-resistant zinc-plated finish (unless noted).

High-temp black glass-filled nylon wheels withstand temperatures up to 500° F and have a debris cap on the swivel to protect the bearings.

Swivel casters with total lock brake the wheel with a face wheel brake and lock the swivel in one operation.

★ Nickel-plated finish. ▲ Wheel has plain metal bearings.
■ Leg thickness is 5/32". ♣ Wheel has ball bearings.

Silent-Glide Premium Threaded-Stem Casters—225 lbs.

- One-piece formed steel
- Sealed double ball swivel bearings
- Sealed single ball wheel bearings
- 3/32" leg thickness

Sealed ball bearings allow these casters to roll quietly. Debris guards on the wheel protect the bearings from contaminants for extended service life. Made of corrosion-resistant zinc-plated steel. Commonly used on shopping carts. Nut and washer are included.

Heavy Duty Threaded-Stem Casters—650 to 900 lbs.

- One-piece formed steel
- Double ball swivel bearings
- Straight roller wheel bearings
- 5/32" leg thickness

Move your heavy loads with these high-capacity casters. Stem is 4" long to work in a variety of applications. All are made of corrosion-resistant zinc-plated steel.

Conductive Threaded-Stem Casters—75 to 210 lbs.

Swivel

Swivel with Brake

- One-piece formed steel
- Double ball swivel bearings
- Plain metal wheel bearings
- 1/16" leg thick. (unless noted)

Conductive wheels reduce static buildup. Surface resistance is less than 10^5 ohms. Made of steel with a corrosion-resistant zinc-plated finish (unless noted). Meet BIFMA standards.

Wheel Dia. × Wd.	Mount Ht.	Cap. Ea., lbs.	Swivel		Swivel w/Side Wheel Brake

★ Nickel-plated finish. ♦ Leg thickness is 3/32".

Dual-Wheel Threaded-Stem Casters—150 to 250 lbs.

Swivel

- One-piece formed steel
- Double ball swivel bearings
- Plain metal wheel bearings
- 3/32" leg thickness

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters. All are made of corrosion-resistant zinc-plated steel.

Note: Wheel width shown is for each wheel.

For information about wheels and casters, see pages 1316-1317.

Low-Profile Threaded-Stem Casters—260 to 500 lbs.

- One-piece formed steel
- Double ball swivel bearings
- 24025T51: Plain bore wheel (no bearings)
- 24025T53: Straight roller wheel bearings
- 3/32″ leg thickness

These low-to-the-ground casters have a wide wheel for extra capacity and stability. All are made of corrosion-resistant zinc-plated steel.

Washdown Metric Threaded-Stem Casters—242 lbs.

- Gray molded reinforced nylon
- Precision double ball swivel bearings
- Precision double ball wheel bearings
- 3/16″ leg thickness

Economical, corrosion-resistant casters are suitable for washdown applications. All have nonmarking wheels with debris guards.

Swivel casters with total lock brake the wheel with a face wheel brake and lock the swivel in one operation.

Roll-and-Set Threaded-Stem Casters—60 to 1,100 lbs.

- Double ball swivel bearings
- Plain bore wheels (no bearings)

A leveling pad lifts the wheel of these casters off the ground to hold your mobile equipment in place, plus it can be adjusted to compensate for uneven surfaces. Choose from thumbwheel and nut pad adjustment. For a compatible wrench for caster with an adjustment nut, see pages 2770-2771.

The ***die cast aluminum frame*** has a beige powder-coated finish. The ***Type 304 stainless steel frame*** offers superior corrosion resistance.

- Double ball swivel bearings
- 1/8″ leg thickness

A debris cap on the swivel keeps bearings free from contaminants for extended service life. ***Type 304 stainless steel*** offers superior corrosion resistance.

Friction-Grip Stem Casters—75 to 325 lbs.

Swivel

- One-piece formed steel
- Double ball swivel bearings
- Plain bore wheel (no bearings), unless noted
- 3/32″ leg thickness (unless noted)

Our best value in friction-grip stem casters. Casters are made of steel with a corrosion-resistant zinc-plated finish (unless noted). Meet BIFMA standards (unless noted). ***Swivel casters with total lock*** brake the wheel with a face wheel brake and lock the swivel in one operation.

★ Nickel-plated finish. ▲ Leg thickness is 1/16″. ♥ Wheels have ball bearings; do not meet BIFMA standards.

For information about wheels and casters, see pages 1316-1317.

Conductive Friction-Grip Stem Casters—75 to 200 lbs.

- One-piece formed steel
- Double ball swivel bearings
- Plain metal wheel bearings
- 3/32″ leg thickness

Conductive wheels reduce static buildup. Surface resistance is less than 10^6 ohms. Casters are made of steel with a nickel-plated finish (unless noted).

■ Zinc-plated finish.

Dual-Wheel Friction-Grip Stem Casters—150 to 250 lbs.

- One-piece formed steel
- Double ball swivel bearings
- Plain metal wheel bearings
- 3/32″ leg thickness

Dual-wheel casters provide better load distribution and easier turning than single-wheel casters. Casters are made of corrosion-resistant zinc-plated steel.

Note: Wheel width shown is for each wheel.

Hooded-Ball Friction-Grip Stem Caster—80 lbs.

- One-piece formed steel
- Double ball swivel bearings
- Plain bore wheel (no bearings)
- 1/16″ leg thickness

Good for use on both carpeted and tile surfaces. Caster has a chrome-plated finish.

Wheel Dia.	Mount Ht.	Cap. Ea., lbs.	Swivel	
7/16″ Dia. × 1 3/8″ Lg. Stem				
Black Solid Polyolefin Wheel—*Durometer is 70D*				
2″	2 5/8″	80	24055T32	$5.78

Hooded Friction-Grip Stem Casters—110 lbs.

- One-piece formed steel
- Double ball swivel bearings
- Maintenance-free precision ball wheel bearings
- 1/8″ leg thickness

A debris cap on the swivel and debris guards on the wheel protect the bearings from contaminants for extended service life. The neoprene rubber wheels resist oil and mild chemicals.

Twin-Wheel Friction-Grip Stem Casters—40 to 110 lbs.

Casters with Hood

Choose from black nylon hoods and zinc hoods available in a variety of finishes. Meet BIFMA standards (unless noted).

Swivel casters with wheel brake have a foot-operated brake that locks the wheel in place, except 22775T81, which has an internal brake that causes the caster to roll when weight is applied and brake when weight is removed. ***Designer black nylon hood*** has a recessed stem to create a seamless joint between the top of the caster and the bottom of most swivel chair bases. ***Conductive nylon wheels*** reduce static buildup. Surface resistance is less than 10^4 ohms.

Swivel with Designer Hood

Swivel with Zinc Hood

To Order: For casters with zinc hood, please specify finish: matte black, antique brass, bright chrome, or satin chrome.

Wire Shelving Friction-Grip Stem Casters—250 to 300 lbs.

With Round Stem

With Square Stem and Brake

- One-piece formed steel
- Double ball swivel bearings
- Plain acetal wheel bearings (unless noted)
- 3/32″ leg thickness
- NSF certified

Make your wire shelving mobile. Casters are compatible with shelving that has 1″ OD 16-ga. tubular legs. All have a debris cap on the swivel to protect the bearings from contaminants for extended life.

Zinc-plated steel casters are available with a 0.865″ Dia.×2 3/16″ Lg. round stem or 0.860″ Wd.×2 3/16″ Lg. square stem. **To Order:** Please specify stem: round or square.

Type 304 stainless steel casters provide superior corrosion resistance. All have a 0.845″ Dia.×2 3/16″ Lg. round stem.

Expanding-Stem Casters—100 to 220 lbs.

With Disc-Style Stem

With Total Lock and Wedge-Style Stem

- One-piece formed steel
- Double ball swivel bearings
- *Disc Stem:* Plain acetal wheel bearings
- *Wedge Stem:* Maintenance-free precision ball wheel bearings
- 3/32″ leg thickness

Quickly adjust the stem diameter on these casters for a secure fit inside a variety of tubing sizes.

Disc-Style Stems— Have a rubber sleeve that expands as it is compressed between two discs. Made of corrosion-resistant nickel-plated steel. NSF certified.

Wedge-Style Stems— Have metal wedges that expand outward for a more secure fit than disc-style stems. Made of corrosion-resistant zinc-plated steel. ***Swivel casters with total lock*** brake the wheel with a face wheel brake and lock the swivel in one operation.

Round-Stem Casters—400 to 900 lbs.

- Formed steel welded frame
- Double ball swivel bearings
- Straight roller wheel bearings
- 1/8″ leg thickness

Ideal for scaffolding, these rugged casters come with a total lock that brakes the wheel with a face brake and locks the swivel in one operation. Stems have two 1/2″ dia. mounting holes. All are steel with a corrosion-resistant zinc-plated finish.

Octagonal-Stem Casters—125 to 145 lbs.

Swivel

- One-piece formed steel
- Double ball swivel bearings
- Plain metal wheel bearings
- 3/32″ leg thickness

The octagonal stem on these casters fits into round and square tubing. It also can be bolted or welded to angle iron. Stems have three mounting holes for securing with 1/4″ bolts or rivets. Casters are made of corrosion-resistant zinc-plated steel.

For information about wheels and casters, see pages 1316-1317.

Square-Stem Casters—250 to 325 lbs.

- One-piece formed steel
- Double ball swivel bearings
- 3/32″ leg thickness
- NSF certified

Swivel — Swivel with Total Lock

Square stems fit into square tubing and can be bolted or riveted to angle iron. All have three mounting holes for 1/4″ bolts or rivets. Made of corrosion-resistant zinc-plated steel. ***Swivel casters with total lock*** brake the wheel with a face wheel brake and lock the swivel in one operation.

Cup-Shoe Round-Stem Caster—75 lbs.

- One-piece molded black nylon
- Single ball swivel bearings
- Plain bore wheel (no bearings)

Commonly used on mobile ladders, the housing on this caster protects the wheel and provides extra stability. A minimum load of 16 lbs. causes the spring-loaded wheel to retract and brings the cup in contact with the ground. Stem fits 1″ OD round, 16-ga. tubing and has one mounting hole. Mounting hardware is included.

Right-Angle Bracket-Mount Casters—75 to 145 lbs.

- One-piece formed steel
- Double ball swivel bearings
- Plain metal wheel bearings
- 3/32″ leg thickness

A 90° angle bracket lets you mount these casters to square legs and angle iron. Brackets have three mounting holes for securing with 1/4″ bolts or rivets. Made of corrosion-resistant zinc-plated steel.

● Includes lock washer and nut. ♣ Made of plain steel with a blue painted hex head and has slotted nut with spring pin.

Reducer Bushings for Wheels

Sleeve Type

Flanged Type

Also known as spanner bushings, these bushings reduce the inside diameter of a bearing to fit a particular axle size.

Sleeve type reduce wear on the axle, and are used in plain bores and with straight roller bearings only. To select the correct size, measure the wheel hub length and choose a bushing that is the same length or longer. All are hardened steel and have a grease fitting (unless noted).

Flanged type (also known as top hat spanners) are used with ball bearings. Use two bushings per wheel. The length of the bushing should not exceed half of the hub length. Flange thickness is 1/4″ for plain steel bushings; 1/8″ for stainless steel.

Washers for sleeve type (sold separately) are made of steel (unless noted) and are used to expand hub length to match reducer length.

Wheel Bearings

Plain Acetal

Plain Flanged Acetal

Straight Roller

Ball

Maintenance-Free Precision Ball

Plain acetal bearings press-fit into the wheel hub and offer excellent chemical and corrosion resistance. Ideal for wet applications. Temperature range is –20° to +160° F. *Flanged bearings* are used in pairs.

Straight roller bearings include a roller bearing cage and an outer raceway for easy installation.

Ball bearings press-fit into the wheel hub. Used in pairs, they roll easily and are ideal for low-speed caster applications.

Maintenance-free precision ball bearings press-fit into the wheel hub. Used in pairs, they significantly reduce the amount of force required to get wheels rolling, plus they require no lubrication.

Retaining washers for straight roller bearings (sold separately) are made of steel (unless noted). They hold the bearings in place and provide protection around the outer raceway. *Sealed retaining washers* provide additional protection by keeping grease inside the bearing and contaminants out.

Note: Do not use any of these wheel bearings in towing applications. Use reducer bushings (sold on page 1350) to reduce axle size.

Note: For tapered roller bearings, alternative plain bearings, and additional bearing sizes not shown below, please see pages 1126-1150.

✓ Made of nylon.

Flanged-Wheel Track Casters—500 to 4,200 lbs.

- Forged steel
- 3/8" leg thickness (unless noted)

Ideal for use on mill and freight trucks and vehicles that run on rails and other square structural tubing. Caster frame has a gray painted finish (unless noted); wheels have a red painted finish (unless noted). Temperature range is –30° to +350° F. For flanged track wheels, please see page 1341.

Get controlled movement in any environment—the wheels on these casters have a 90° V-groove for use on an angle-iron track and a flat tread for use on the floor.

For 1¼″×1¼″ and 1½″×1½″ angle-iron track, use casters with 2″ wide wheels. For 2″×2″ track, use 2½″ and wider wheels.

If setting up a system, see 9017K on page 3658 for angle track.

(A) Premium (Kingpinless) Casters— The best-performing and most durable casters around. Forged steel construction and a large swivel raceway eliminate the need for a kingpin. All have large-diameter single ball swivel bearings.

Casters with cast iron wheels have a blue painted finish. Wheels are black except 8″×2½″, which are red. Temperature range is –30° to +275° F. *Casters with high-temperature iron wheels* have a zinc-plated finish. Temperature range is –200° to +400° F.

(B) Casters with One-Piece Forged Steel Mounting Plate with Kingpin— The mounting plate and kingpin are machined from a single piece of forged steel for a stronger, more durable caster than those with a bolt and nut or rivet kingpin. Casters have double tapered roller swivel bearings, making them well suited for heavy loads in rugged applications. All have a zinc-plated finish. Temperature range is –40° to +200° F.

(C) Forged Steel Casters— A bolt and nut kingpin connects the forged steel welded frame to the forged steel mounting plate. The nut lets you tighten the tension of the swivel raceway to adjust for wear. Casters have double ball swivel bearings and a zinc-plated finish. Temperature range is –40° to +200° F.

(D) Formed Steel Welded Frame Casters— The formed steel mounting plate is connected to the frame with a rivet kingpin. Casters have double ball swivel bearings and a zinc-plated finish.

Casters with cast iron wheels have a temperature range of –40° to +200° F.

Casters with green polyurethane wheels have a temperature range of –40° to +180° F.

(E) Formed Type 304 Stainless Steel Welded Frame Casters— These casters are ideal in corrosive and wet environments.

Casters with Type 303 stainless steel wheels can be used in high-temperature environments and can be steam cleaned. All have double stainless steel swivel ball bearings. Temperature range is –20° to +350° F.

Casters with green polyurethane wheels have the mounting plate connected to the frame with a stainless steel rivet and have double ball swivel bearings. Temperature range is –40° to +160° F.

For information about wheels, see page 1316.

Flanged Track Wheels

Rugged wheels are great for moving equipment on rails and overhead tracks. All are made of steel with a corrosion-resistant black powder-coated finish. They are precision machined to tight tolerances for a correct fit and have a solid center and a grease fitting (unless noted). Temperature range is –13° to +250° F.

Also Available: Wheels with plain bore (no bearings) and a keyway. Please ask for 2353T888 for single flanged or 22495T888 for double flanged and specify (from the table) wheel diameter, wheel width, flange diameter, overall width, axle diameter, hub length, load capacity, material, with or without keyway, and with or without set screws. All of these wheels have a red painted finish.

■ Wheels with two axle diameters include a reducer bushing. First dia. is with bushing; second is without.
♥ Does not have a grease fitting.

V-Groove Wheels

The V-groove, face, and tread of these wheels are machined for controlled movement and easy gliding along V-groove angle-iron track. They also can be used directly on the floor. All have a 90° V-groove and a solid center (unless noted).

Polyurethane wheels roll quietly and are easy on the track. ***Cast iron wheels*** offer high capacities at an economical price. ***High-strength iron wheels*** (also known as ductile iron) handle higher capacities and temperatures. ***Forged steel wheels*** offer superior capacity for large loads. ***Black phenolic wheels*** are economical. ***Type 303 stainless steel wheels*** are maintenance free and ideal in wet and corrosive environments.

For 1¼″ × 1¼″ and 1½″ × 1½″ angle-iron track, use up to 2″ wide wheels. For 2″ × 2″ track, use 2½″ and wider wheels. If setting up a system, see 9017K on page 3658 for angle track.

■ Wheels with two axle diameters include a reducer bushing. First dia. is with bushing; second is without.
▲ Wheel has a 92° V-groove; temperature range is +5° to +180° F. ♦ Temperature range is –30° to +600° F.
♠ Has a spoked center.

For information about wheels, see page 1316.

High-Capacity Forged Steel Wheels

Forged from carbon steel for strength, these wheels are nearly unbreakable under heavy shock loads and are tougher than cast iron wheels. Although they can be used on rough surfaces, they perform best on smooth surfaces.

Wheels have machined treads and faces with rounded edges that minimize floor wear and ensure easy turning under heavy loads. All have a grease fitting. Temperature range is –40° to +280° F.

Wheels with Straight Roller Bearings— Hub length is 1/4″ longer at smaller axle diameter, except 2307T22.

Floor-Saving Premium Polyurethane-Tread Wheels

- Premium translucent polyurethane on cast iron core
- Durometer is 70D
- Temperature range is –30° to +180° F

With higher capacities and better durability than other polyurethane wheels, these wheels are an alternative to metal wheels. They handle heavy loads while protecting your floors. Maintenance-free precision ball bearings reduce the amount of force required to get wheels rolling and extend service life.

Stainless Steel Wheels

There's no better choice for corrosive and high temperature environments. Type 303 stainless steel construction (unless noted) and sealed maintenance-free precision ball bearings make these wheels ideal for use in washdown applications and food processing areas. Wheels can be steam cleaned as well as sterilized with steam (are autoclavable). Temperature range is –20° to +350° F.

♣ Type 304 stainless steel.

High-Strength Iron Wheels

Made from high-strength iron, also known as ductile iron, these wheels are stronger than cast iron wheels. They perform best on smooth surfaces but also can withstand intermittent use on rough surfaces.

Wheels have fully machined treads and faces to evenly distribute loads for maximum floor protection. All have a grease fitting. Temperature range is –30° to +350° F.

■ Wheels with two axle diameters include a reducer bushing. First diameter is with bushing; second is without.

Cast Iron Wheels

Solid Center

Spoked Center

Cast iron wheels (also known as gray iron or semi-steel wheels) combine strength and durability with abrasion and heat resistance. Wheels have machined treads that perform best on smooth surfaces. All have a solid center (unless noted). Temperature range is 0° to 180° F.

Wheels with Straight Roller Bearings— 5″ diameter and larger wheels have a grease fitting.

■ Wheels with two axle diameters include a reducer bushing. First diameter is with bushing; second is without.

♠ Wheels with two hub lengths include a reducer bushing. First length is with bushing; second is without. ● Has a spoked center.

For information about wheels, see page 1316.

High-Capacity Nylon Wheels

- Solid black nylon
- Durometer is 80D
- Temperature range is –15° to +185° F

Comparable to forged steel in strength yet these nylon wheels are much lighter in weight. The machined tread resists sliding and will not harm your floors. Plus they resist corrosion and most chemicals. Maintenance-free precision ball bearings reduce the amount of force required to get wheels rolling and extend service life.

Wheel Size, Dia. × Wd.	For Axle Dia.	Hub Lg.	Cap. Ea., lbs.		
With Maintenance-Free Precision Ball Bearings

Glass-Filled Nylon Wheels

- Solid black glass-filled nylon
- Durometer is 85D
- *Glass Filled*: Temperature range is –40° to +250° F (unless noted)
- *High-Temperature Glass Filled*: Temperature range is –20° to +425° F

Ideal for food processing areas, these wheels last up to four times longer than phenolic wheels and are moisture and chemical resistant.

Maintenance-free precision ball bearings reduce the amount of force required to get wheels rolling.

High-temperature glass-filled wheels withstand high heat.

■ Wheels with two axle diameters include a reducer bushing. First diameter is with bushing; second is without.

★ Temperature range is –40° to +350° F.

Phenolic Wheels

Easy to roll and resistant to water, grease, animal fats, and most acids, these lightweight wheels perform well in harsh environments.

Black wheels have a temperature range of –65° to +250° F.

Brown heat-resistant wheels are used in bakeries and production lines that pass through heating elements. Temperature range is –65° to +475° F.

Brown impact-resistant wheels offer 35% greater impact resistance than black wheels. They're also more resistant to chipping and fraying and provide better shock absorption. Temperature range is –50° to +250° F.

■ Wheels with two axle diameters include a reducer bushing. First diameter is with bushing; second is without.
♠ Wheels with two hub lengths include a reducer bushing. First length is with bushing; second is without.

Polyurethane Wheels

- Solid blue polyurethane
- Durometer is 80D
- Temperature range is –40° to +230° F

Great for applications requiring sanitary conditions, these chemical- and oil-resistant wheels withstand extreme temperature changes and can be steam cleaned.

Maintenance-free precision ball bearings extend service life and reduce the amount of force required to get wheels rolling. Ideal in tow line and continuous-use applications.

Lightweight Polyurethane-Tread Wheels

- Gray or red polyurethane on polypropylene core
- Durometer is 85A or 95A
- Temperature range is –20° to +220° F

A lightweight core coupled with a nonmarking rounded tread allows for easy rolling and swiveling. The tread is also thicker than other polyurethane wheels. Ideal for wet conditions, wheels won't absorb water and resist most acids and many chemicals.

Plain acetal bearings won't rust, making them a good choice for washdown applications. ***Wheels with straight roller bearings*** have a grease fitting for easy maintenance, unless noted.

Wheels with 85A durometer have a gray tread and provide a cushioned ride. ***Wheels with 95A durometer*** have a red tread and are abrasion resistant. Ideal for heavier loads.

To Order: Please specify durometer: 85A or 95A.

★ Does not have a grease fitting.

Cut-to-Width Polyurethane Wheels

Machinable to fit many applications

- Solid polyurethane
- Durometer is 30A, 50A, 70A, or 90A
- Temperature range is –40° to +180° F

Make your own wheels. Use a band saw to cut these 20″ long blanks to desired length and trim to fit. Easily drilled and machined, you can use them as caster, V-groove, and flanged wheels, as well as for drive and conveyor idler rollers and pulleys. They resist abrasion, water, oil, and mild solvents, plus are nonmarking, exceptionally quiet, shock absorbing, and long lasting. *Note:* Do not cut with a circular saw.

Wheels with 30A durometer have an orange tread and are extra soft with gripping properties ideal for fragile loads.

Wheels with 50A durometer have a yellow tread and are comparable to soft rubber but are more resilient.

Wheels with 70A durometer have a blue tread and increased firmness but still provide a cushioned ride.

Wheels with 90A durometer have a red tread and are harder for more demanding applications.

To Order: Please specify durometer: 30A, 50A, 70A, or 90A.

Premium Polyurethane-Tread Wheels

- Premium red or purple polyurethane on cast iron core
- Durometer is 84A or 93A
- Temperature range is –20° to +175° F

These premium polyurethane-tread wheels last longer and roll more easily than other polyurethane-tread wheels. Maintenance-free precision ball bearings extend service life and reduce the amount of force required to get wheels rolling.

Wheels with 84A durometer are softer for a more cushioned ride and won't collect debris.

Wheels with 93A durometer are extra durable for a much longer life than standard polyurethane wheels.

Polyurethane-Tread Wheels

- Blue or red polyurethane on cast iron core
- Durometer is 95A
- Temperature range is –20° to +175° F

Impact Absorbing

Smooth rolling and strong, these wheels have higher capacities than rubber wheels. They resist abrasion, chipping, splitting, most chemicals, oil, and solvents. Plus, they roll quietly and are nonmarking.

Wheels with tapered roller bearings can handle heavy loads. Recommended for towing applications.

Impact-absorbing wheels have an angled web-and-spoke design. They deflect when rolling over obstacles and then spring back into place to reduce impact and vibration.

Lightweight Aluminum-Core Polyurethane-Tread Wheels

- Polyurethane on aluminum core
- *Single Wheels*: Tread is red
- *Dual Wheels*: Tread is blue
- *Single Wheels*: Durometer is 55D
- *Dual Wheels*: Durometer is 95A
- Temperature range is –30° to +180° F

Single Wheel

Dual Wheel

All the benefits of a polyurethane tread plus a lightweight aluminum core.

Dual wheels rotate in opposite directions when you turn for better maneuverability than single wheels. Using narrow wheels, this unique design results in wheels with hub lengths comparable to single wheels with the same diameter. Maintenance-free precision ball bearings extend service life and reduce the amount of force required to get wheels rolling.

Quick-Turn Polyurethane-Tread Wheels

Aluminum Core *Glass-Filled Urethane Core*

- Orange polyurethane on aluminum core
- Blue polyurethane on glass-filled urethane core
- Durometer is 74A, 75A, or 84A
- Temp. range is –50° to +150° F

Similar to scooter wheels, these wheels have a rounded tread for easier turning and swiveling than flat-tread wheels.

Tread is resistant to oil, grease, some solvents, and mild acids. Maintenance-free precision ball bearings extend service life and reduce the amount of force required to get wheels rolling.

Polyurethane-Tread Pallet and Lift Truck Wheels

3″ Dia. BT Truck Wheel with Bearings

3 1/4″ Dia. × 3 1/4″ Wd. Crown Truck Wheel Only

8″ Dia. Multiton Truck Wheel Only

8″ Dia. Rol-Lift Truck Wheel with Bearings

- Polyurethane on steel core
- Durometer is 90A
- Temperature range is –20° to +140° F

These wheels are made for specific pallet and lift trucks. While the wheel sizes may appear similar to other truck models, each wheel is specially machined to fit specific bearings. All resist abrasion, oil, and grease. ***Wheels with bearings*** have maintenance-free precision ball bearings that extend service life and reduce the amount of force required to get wheels rolling.

Note: Before ordering, refer to the owner's manual of your pallet or lift truck to determine the manufacturer's part number. Then find that number listed in the table.

Also Available: Replacement bearings as well as other manufacturers' wheels or sizes not shown. For replacement bearings, please ask for 2670T222 and specify the McMaster-Carr part number for the wheel only. For wheels not shown, please ask for 2670T999 and specify the manufacturer's name and part number and the wheel size.

Rubber Wheels

Rubber Wheels—For general-purpose use. Temperature range is –40° to +120° F.

Conductive Rubber Wheels—Prevent static buildup. They have a surface resistance of less than 10^6 ohms. Temperature range is –40° to +180° F. Meet Fed. Spec. FF-C-77/FF-C-86.

Neoprene Rubber Wheels—Resistant to oil, chemicals, solvents, and acid. They are more resilient and deteriorate more slowly than natural rubber. Wheels have debris guards (unless noted) to protect the bearings from contamination for longer service life. Temperature range is –20° to +180° F.

Cushion tread wheels provide quiet mobility and floor protection. ***Hard tread wheels*** have higher capacities and roll more easily than cushion-tread wheels.

■ Wheels with two axle diameters include a reducer bushing. First dia. is with bushing; second is without.
▲ Does not have debris guards.

Performance Rubber-Tread Wheels

- Gray (unless noted) thermoplastic rubber (TPR) on polypropylene core
- Durometer is 65A
- Temperature range is –45° to +120° F

Roll over debris—even metal shavings and chips—without these wheels breaking apart. They are nonmarking and resist chemicals, water, and steam. The soft tread provides a more cushioned ride yet is easier to roll than other rubber-tread wheels.

Easy-Roll Rubber-Tread Wheels

3½″ to 6″ Dia.

- Blue rubber on nylon core
- Durometer is 70A
- Temperature range is –40° to +200° F

Resilient rubber tread rebounds quickly, so you can roll and turn easily on most surfaces. The maintenance-free precision ball bearings require minimal effort to get these wheels rolling.

Super-Soft Rubber-Tread Wheels

- Gray thermoplastic rubber (TPR) on polypropylene core
- Durometer is 40A
- Temperature range is –40° to +180° F

Extra-soft thermoplastic rubber provides superior cushioning and a quieter ride than other rubber wheels. Tread is nonmarking. Great for light duty applications.

■ Wheels with two axle diameters include a reducer bushing. First diameter is with bushing; second is without.
♠ Wheels with two hub lengths include a reducer bushing. First length is with bushing; second is without.

Rubber-Tread Wheels

Spoked Center

Solid Center

- Black rubber on cast iron core
- *Standard Wheels*: Durometer is 82A (unless noted)
- *High-Capacity Wheels*: Durometer is 90A
- Temperature range is –40° to +180° F

Thanks to the rubber tread on these wheels, you get smooth rolling on rough surfaces. ***High-capacity wheels*** support more weight, resist heat buildup, and are abrasion resistant.

For information about wheels, see page 1316.

Lightweight Aluminum-Core Rubber-Tread Wheels

Thin Tread

Standard Tread

These economical wheels have a black tread and a lightweight aluminum core that handles high capacities and is corrosion resistant. All have a solid core (unless noted).

Wheels with thin rubber tread deflect less and require less effort to roll than standard-tread wheels. Durometer is 70A (unless noted). Temperature range is –20° to +160° F.

Wheels with standard rubber tread provide a cushioned ride on any surface. Durometer is 70A. Temperature range is –20° to +160° F.

Maintenance-free precision ball bearings eliminate axle wear and provide smoother rolling than straight roller bearings. They also extend service life and reduce the amount of force required to get wheels rolling.

■ Wheels with two axle diameters include a reducer bushing. First diameter is with bushing; second is without.
♦ Durometer is 63A.
♣ Has a spoked core.

Neoprene Rubber-Tread Wheels

- Black neoprene rubber on aluminum core
- Durometer is 70A
- Temperature range is –70° to +160° F

Neoprene tread resists oil, solvents, and acids. It's also more resilient and deteriorates more slowly than natural rubber. All wheels have a solid lightweight aluminum core (unless noted).

Cushion Rubber-Tread Wheels

Polypropylene Core

Aluminum Core

Along with offering high capacities and providing a cushioned ride, these solid black ribbed rubber-tread wheels never go flat.

Wheels with polypropylene core have a mounted tread and are dent and rust resistant. Durometer is 80A. Temp. range is –22° to +158° F. ***Wheels with aluminum core*** have a mold-on tread for increased durability. Durometer is 60A. Temp. range is –40° to +120° F.

Centered hubs are used on wheels mounted between two forks. ***Offset hubs*** are for mounting wheels to one side of an axle to provide clearance between the wheel and the equipment it is mounted to.

Shock-Absorbing Rubber-Tread Wheels

- Gray rubber on aluminum core
- Durometer is 62A
- Temperature range is –15° to +160° F

Also known as balloon tires, these wheels are an excellent choice for absorbing impact and reducing noise. The rubber tread is nonmarking.

Wheel Size, Dia. × Wd.	For Axle Dia.	Hub Lg.	Cap. Ea., lbs.		
With Ball Bearings					
6″ × 2″	1/2″	2 1/4″	350	**9957T12**	$37.80

For information about wheels, see page 1316.

Never-Go-Flat Cushion Rubber-Tired Wheels

Smooth Rim

Lug-Type Rim

Get quality and value for light to medium duty applications. Also known as semi-pneumatic, wheels consist of a hollow-core rubber tire mounted on a steel rim. For flat-free operation, the hollow core of "dead air" (unless noted) does not require inflation and the black ribbed-rubber tread (unless noted) withstands nails, glass, and other sharp objects. The rim is made of two formed steel discs welded together. Temp. range is 20° to 120° F.

Smooth rims are perfect for lighter duty applications. ***Lug-type rims*** are formed with a series of bubble-like indentations around the outer rim, which line up with lugs in the tire. This locks the tire in place and prevents it from slipping on the rim. Ideal for medium duty applications where the wheel will be subjected to heavier loads.

Centered hubs are used on wheels mounted between two forks. ***Offset hubs*** are for mounting wheels to one side of an axle to provide clearance between the wheel and the equipment it is mounted to.

Tread A

Tread B

Tread C

(1&2) Never-Go-Flat Rubber-Tired Wheels— Also known as semi-pneumatic, these wheels have a thin pocket of nonpressurized air that does not require inflation. The black rubber tire resists punctures.

(3) Pneumatic Wheels— Have a single-ply black rubber tire with a rubber inner tube.

(4) Flat-Free Polyurethane-Filled Wheels— Comparable to the pneumatic wheels above but filled with polyurethane foam so they won't go flat. Have a black rubber tire with a rubber inner tube.

(5) Steel Wheels— Have all welded steel construction.

Complete Wheel with One-Piece Rim

Complete Wheel with Two-Piece Rim for Casters

Tire Only

A

B

C

D

E

F

Pneumatic wheels are among the quietest, most shock-absorbing wheels available, making them ideal for use with fragile loads. They consist of an air-filled rubber tire mounted on a steel rim. Wheels with a wider tire (5″, 6.5″, and 8.5″) also protect grass and sod while providing good traction.

Choose from *complete wheels* (a tire mounted on a rim with bearings) and *tires only*. All tires are four-ply rubber (unless noted). Choose from black and nonmarking gray.

Wheels with two-piece rims are bolted together for easier tire and inner tube replacement. Please see page 1362 for inner tubes.

Wheels with one-piece rims are welded and tubeless (unless noted).

Centered hubs are used on wheels mounted between two forks.

Offset hubs are for mounting wheels to one side of an axle to provide clearance between the wheel and the equipment it is mounted to.

Rim with Four Mounting Holes

Rim with Five Mounting Holes

Replace your worn or damaged trailer wheels—these wheels have a stiffer sidewall for reduced trailer sway during towing. All are made of black rubber. Rims are made of steel and are available with four or five mounting holes. All wheels are approved for highway use.

Flat-Free Polyurethane-Filled Wheels

A

B

Filled with liquid polyurethane that solidifies to a resilient rubber-like core, these wheels give you the cushioned ride of a pneumatic wheel but will never go flat. Wheels have one-piece steel rims and black two-ply rubber tires (unless noted).

Centered hubs are used on wheels mounted between two forks. ***Offset hubs*** are for mounting wheels to one side of an axle to provide clearance between the wheel and the equipment it is mounted to.

Flat-Free Lightweight Polyurethane Wheels

A

B

C

Get the cushioned ride of a pneumatic wheel with the flat-free benefits of a foam-filled wheel. All are made of nonmarking black closed-cell polyurethane, have a steel rim, and are recyclable.

Centered hubs are used on wheels mounted between two forks. ***Offset hubs*** are for mounting wheels to one side of an axle to provide clearance between the wheel and the equipment it is mounted to.

Furniture Glides

Use on furniture with wood legs.

(5&6) Have a cushion to reduce noise and vibration.

(7) Have a steel rivet that goes into the grain to hold the glide and prevent the leg from splitting.

(8) Has a 14° swiveling radius to compensate for uneven floors.

(9&10) Have adhesive backing that sticks firmly without the use of additional fasteners.

Easy-Slide Glides

PTFE glides are best for use on carpet and ceramic tile. ***Acetal*** glides have a high-density foam cushion that continually adjusts the glide for surface irregularities. They work well on hard surfaces and carpet.

(16) Reusable glides slip under furniture for temporary installation. No screws or adhesives needed. All have a large diameter for moving large pieces of furniture and equipment and are treated with an additive for easier movement.

Slip-On Furniture Glides

Slip over furniture leg ends.

(17) Plastic glides have a hard plastic base and a smooth inside for easy installation. All are nonskid for use on floors and carpet.

(18) Vinyl grip-top glides adapt to a variety of leg diameters and shapes. Grippers on the top keep glides secure. *Polyethylene base* protects carpet yet allows easy movement. *Felt base* protects hard floor surfaces.

(19) Rubber glide with felt base is for stackable chairs and chairs with swivel feet. Base protects hardwood floors.

About Leveling Mounts

In addition to leveling the supports or legs of equipment, leveling mounts position equipment above the floor for easier cleaning and inspection. Mounts that swivel compensate for uneven floors.

Vibration-damping leveling mounts also isolate vibration, shock, and noise transmitted from machines. Performance is measured by deflection (the distance the mount moves when subjected to force). Generally the higher the deflection rating, the greater the vibration, shock, and noise isolation.

Before selecting a mount, consider how your machine weight is distributed. If the weight is evenly distributed, use the following formula:

$$\text{Capacity per Mount} = \frac{\text{Total Machine Weight}}{\text{No. of Mounting Points}}$$

If the weight is unevenly distributed, select the capacity for each mount based on where the weight is concentrated.

Leveling Mounts

(1) Light Duty—Stud is zinc-plated steel; base is white plastic. Not rated for temperature.

(2) High Temperature—Stud is zinc-plated steel; base is black plastic.

(3) Cushion Rest—The black plastic pad on top of the stainless steel base cushions equipment and furniture. Stud is zinc-plated steel. 2515T16 has a propeller nut, which provides a thread for non-threaded wood applications.

(4) Easy Adjust—A hex nut at the base of the stud and a slotted stud top allow easy height adjustment. Stud is zinc-plated steel. Base is nickel-plated steel on top with a white plastic bottom except high temperature have a gray bottom.

(5) Easy Adjust with Cushioned Bottom—Stud is zinc-plated steel and has a hex nut for height adjustment. Base is zinc-plated steel on top with a black plastic cushioned bottom.

(6) Low Profile Easy Adjust—Use when there is little room between the machine base and floor. Stud is steel and has a hex nut for height adjustment. Base is black plastic.

(7) Self Adjusting—Have a hydraulic shock absorber that automatically adjusts up to 5/16″ to compensate for uneven floors. Stud is zinc-plated steel. Base is black plastic.

(8) High Capacity—Choose from zinc-plated steel and stainless steel stud. Base is same as stud material on top with a white, non-marring plastic bottom.

(9) Oil-Resistant Plastic—Made entirely of black plastic, these mounts will not mar your mounting surface.

Vibration-Damping Leveling Mounts

The pad on the bottom of these mounts reduces vibration and grips the floor. Pad is made of oil-resistant black rubber with a temperature range of –40° to 200°F except 6167K14 and K17, which have a maximum temperature of 150°F. Base and stud are zinc-plated steel.

Heavy Duty Vibration-Damping Leveling Mounts

Higher deflection ratings translate to greater vibration and shock isolation. Mounts have a black rubber base bonded to a threaded steel insert. Temperature range is –20° to 180°F.

Mounts ***with stud*** include a flange nut and a hex nut for height adjustment. Stud is zinc-plated steel.

Mounts ***with threaded hole*** can be used with your own threaded rod or bolt. Grade 2 is recommended.

Quick-Install Vibration-Damping Leveling Mounts

The separate bolt and base simplify installation and require less clearance than one-piece mounts. The pad under the base absorbs vibration and shock to prolong machine life. Pad is black rubber, resists oil and grease, and has a temperature range of –20° to 180°F. Base is steel; bolt is zinc-plated steel. 60915K77 is designed for machines that create strong horizontal forces, such as injection-molding equipment.

Size	Thread Lg. (A)	Cap. per Mount, lbs.	Deflect. @ Max. Cap.	Base Dia. (B)	O'all Ht. (C)

Low-Profile Swivel Leveling Mounts

At less than 2″ tall, it's easy to position these compact mounts when clearance is limited. Stud and base are stainless steel for rust and corrosion resistance. The base nut swivels 10° to compensate for uneven surfaces. NSF certified.

Mounts ***with nonskid rubber pad*** are nonmarring and add an extra measure of stability. Pad is black and has a temperature range of 0° to 180°F.

Size	Thread Lg. (A)	Cap. per Mount, lbs.	Base Dia. (B)	O'all Ht. (C)

Swivel Leveling Mounts

The ball-and-socket nut in the base of these mounts allows the stud to swivel 15° to keep equipment level on uneven floors. Mounts include a removable zinc-plated steel nut.

Mounts *with nonskid pad* add an extra measure of stability. Pad is black rubber and has a temperature range of –20° to 170° F.

Nickel-Plated Steel— Provides some corrosion resistance. Stud is nickel-plated steel.

Zinc-Plated Steel— Offers more corrosion resistance than nickel. Stud is zinc-plated steel.

Black Luster Steel— Use where appearance is a concern. Stud is zinc-plated steel.

Acetal— An economical choice in corrosive environments that don't require high load capacities. Base is white and nonmarring; stud is zinc-plated steel. Temperature range is –20° to 170° F.

Swivel Leveling Mounts with Threaded Hole

Add your own threaded stud or bolt to build a swivel leveling mount that fits your needs. A ball-and-socket nut allows the stud to swivel 15° to keep equipment level on uneven floors.

Mounts *with nonskid pad* add an extra measure of stability. Pad is black rubber and has a temperature range of –20° to 170° F.

Nickel-Plated Steel— Provides some corrosion resistance.

Zinc-Plated Steel— Offers more corrosion resistance than nickel.

Black Luster Steel— Use where appearance is a concern.

Acetal— An economical choice in corrosive environments that don't require high load capacities. It's white and nonmarring. Temperature range is –20° to 170° F.

High-Capacity Acme Threaded Swivel Leveling Mounts

Broader, stronger threads enable faster adjustments and higher load capacities than standard V-shaped threads.

Base swivels 15° to compensate for uneven floors. Stud includes a removable nut. Made of zinc-plated steel.

For information about leveling mounts, see page 1366.

Stainless Steel Swivel Leveling Mounts

With Stud

With Threaded Hole

With Stud

With Threaded Hole

Made entirely of stainless steel, these mounts hold up in harsh environments. They include a ball-and-socket nut in the base that allows the stud to swivel 15°.

Mounts ***with stud*** include a removable nut.

Mounts ***with threaded hole*** allow you to build your own swivel leveling mount with a threaded rod or bolt.

Type 303 Stainless Steel— Resists corrosion when exposed to water and most chemicals.

Type 316 Stainless Steel— Provides superior corrosion resistance.

Bolt-Down Swivel Leveling Mounts with Threaded Hole

Bolt down these mounts to keep your equipment from moving. They have two punch-out holes on either side and swivel 15° to compensate for uneven floors. Add a threaded stud or bolt to build your own swivel leveling mount. Base is nonmarring black nylon. Temperature range is –20° to 170° F.

Mounts ***with nonskid bottom*** have a black rubber pad that adds an extra measure of stability.

Zinc-Plated Steel— Offers some corrosion resistance.

Type 303 Stainless Steel— Provides superior corrosion resistance.

■ Mounts with nonskid bottom: Add 1/16″ to overall height for 3,500- to 7,500-lb. mounts; add 5/16″ to 10,000-lb. mounts.

For information about leveling mounts, see page 1366.

Bolt-Down Swivel Leveling Mounts

Punch-out holes in the base let you bolt down these mounts to keep your equipment stationary (fasteners not included). The base nut swivels 15° to compensate for uneven floors. Mounts also include a removable nut. Base is nonmarring black nylon. Temperature range is –20° to 170° F.

Mounts ***with offset mounting hole*** have a teardrop shape that offsets the hole so you can install without moving your machine.

Mounts ***with nonskid bottom*** have a pad that provides an extra measure of stability. Pad is black rubber.

Zinc-Plated Steel—Offers some corrosion resistance.

Type 303 Stainless Steel—Provides superior corrosion resistance.

Leveling Mounts & Tube Inserts

For information about leveling mounts, see page 1366.

Ultra-High Capacity Leveling Mounts

Don't let their small size fool you—these adjustable mounts provide remarkably high load capacities. Add height to mounts using a swivel top or shim. Use with inch or metric bolts.

All are unthreaded and made of steel. You can use one swivel top and one shim per mount. ***Swivel tops*** allow mounts to swivel up to 4° in any direction while providing additional height adjustment. Use a ***shim*** under any mount to increase the height. Two ***spanner wrenches*** are required to adjust the height of each mount—one to brace the bottom half of the mount and the other to turn the top half.

Threaded Tube Inserts

Square

Round

Install these inserts and you'll be able to use threaded leveling mounts on your tube-end machinery supports, instrument bases, and conveyor equipment. Inserts are plastic with brass threads and tap into place with a rubber hammer.

Inch inserts have a temperature range of 20° to 180° F.

Metric inserts have a temperature range of –20° to 180° F.

Wedge-Style Leveling Mounts

Level machines and equipment with inaccessible mounting feet or no feet at all—your machine rests on the mounts instead of being bolted to them. The wedge moves up and down to provide lift, while moving side-to-side to compensate for uneven floors. A ribbed top provides maximum grip and prevents liquids from settling. Mounts adjust laterally up to 5°. Mounts are cast iron; bolt is zinc-plated steel.

Vibration-damping mounts have a pad under the base that reduces noise and absorbs vibration and shock to prolong machine life. Pads resist oil, grease, and acids. Temperature range is 0° to 150° F.

Vibration-Damping Swivel Leveling Mounts

About Vibration-Damping Mounts

Vibration-damping mounts isolate vibration, shock, and noise transmitted to and from machinery. They reduce maintenance costs, prolong equipment life, and protect floors. Performance is measured by deflection (the distance the mount moves when subjected to force). Generally, the higher the deflection rating, the greater the vibration, shock, and noise isolation.

Most vibration-damping mounts are used in *compression* applications. Some mounts can also be used in *shear* applications, where force is applied to the stud or bolt hole from the side.

Before selecting a mount, consider how your machine weight is distributed. If the weight is evenly distributed, use the following formula:

$$\text{Capacity per Mount} = \frac{\text{Total Machine Weight}}{\text{No. of Mounting Points}}$$

If the weight is unevenly distributed, select the capacity for each mount based on where the weight is concentrated.

Vibration-Damping Swivel Leveling Mounts

With Stud

With Threaded Hole

A pad under the base reduces noise and absorbs vibration and shock to prolong machine life. The base has a ball-and-socket nut that allows the stud to swivel 15° to compensate for uneven floors. Base is zinc-plated steel. Pad has a temperature range of –20° to 170° F.

Standard mounts have a black pad. ***High capacity*** mounts have a brown pad.

Mounts ***with stud*** come with a removable locking nut. Stud is zinc-plated steel.

Mounts ***with threaded hole*** can be used with your own threaded rod or bolt.

Heavy Duty Vibration-Damping Swivel Leveling Mounts

Square Base with Stud

Round Base with Threaded Hole

Higher deflection ratings translate to greater vibration and shock isolation. All of these mounts have a solid base made of oil-resistant black rubber. A steel bracket within the base allows the stud to swivel 30° to compensate for uneven floors. Temperature range is –20° to 180° F.

Mounts ***with stud*** include removable nuts. Bolt is zinc-plated steel.

Mounts ***with threaded hole*** can be used with your own threaded rod or bolt.

Quick-Install Vibration-Damping Swivel Leveling Mounts

The bolt and base are separate components to simplify installation—they require less clearance than one-piece mounts. Slide the base under equipment and insert and adjust the bolt from above. Bolt rests in an unthreaded depression in the center of the base and swivels up to 7° to compensate for uneven floors.

Base is cast iron and has an oil-resistant black rubber pad to reduce slipping. Temperature range is –40° to 200° F. Bolt is zinc-plated steel.

For information about vibration-damping mounts, see page 1374. For information about durometer, see page 3526.

Stainless Steel Vibration-Damping Swivel Leveling Mounts

All-stainless steel construction stands up to water and chemicals and won't rust or corrode like other metals can. There is a black rubber pad under the base that reduces noise and absorbs vibration and shock, prolonging machine life. Pad has a temperature range of 0° to 200° F, except pad for 1¼″ base dia. mounts has a temperature range of –20° to 170° F. Mounts swivel to compensate for uneven floors. Mounts ***with extra-long stud*** provide more clearance between your equipment and the floor.

Standard mounts swivel 15°. All include one removable locking nut and one removable washer.

Bolt-down mounts have a hole in the base so you can bolt them down to keep equipment stationary. Mounting hole is 0.63″ (fasteners not included). Mounts swivel 10°.

FDA-compliant mounts have no place for contamination to accumulate, so they meet FDA requirements for food-processing equipment. A casing covering the threaded-stud surface serves as the nut, ensuring there are no exposed threads between the stud and the base. Base nut swivels 20°.

Standard (1¼″ Base Dia.)

Standard (2⅝″ and larger Base Dia.)

★ Capacity per mount is 4,000 lbs.

Tear-Resistant Light Duty Vibration-Damping Mounts

A specially designed natural rubber body provides uniform stress distribution, isolates vibration, and protects from occasional shock in compression load applications. Metal parts are aluminum for 2-8 lb. capacity mounts and steel for 12-90 lb. capacity mounts. Rubber is black. Temperature range is 0° to 170° F.

All have four mounting holes (fasteners not included). ***Surface*** mounts have a holder that raises the entire mount above the supporting base, eliminating the need to drill a large hole in the base material. ***Optional washers*** can be installed (one on each end of the mount) to keep equipment supported if the rubber fails.

Oil-Resistant Light Duty Vibration-Damping Mounts

Specifically designed for light vertical load applications, these mounts buckle under loads to protect small equipment such as compressors and pumps from vibration and shock. They're made of oil-resistant rubber and have an aluminum mounting flange with two holes (fasteners not included). Temperature range is –20° to 180° F. Rubber is black.

Vibration-Damping Grommets and Bushings

Dampen vibration as well as isolate and reduce shock and motion in motors, fans, blowers, actuators, circuit boards, and other electromechanical equipment. Unlike grommets, bushings can work with a range of hole thicknesses.

Ribbed grommets and bushings are more flexible. Use *ribbed bushings* (Style 7) with *flat ribbed rings* (Style 8) to fill space between the bushing and the equipment surface.

High Damping— Made of PVC, these grommets and bushings absorb vibration quickly and rebound less than their low-damping equivalents. Durometer is 56A. Temp. range is 55° to 105° F. Color is blue.

Low Damping— Compared to high-damping grommets and bushings, these absorb vibration more slowly and have more elastic for greater rebound. They are made of rubber. Durometer is 57A. Temperature range is –40° to 120° F. Color is black.

For information about vibration-damping mounts, see page 1374. For information about durometer, see page 3526.

Versa-Mount Vibration-Damping Mounts

Mount in any direction with this two-piece design. Mounts have an unthreaded zinc-plated steel insert to handle both compression and shear loads. Made of oil-resistant black rubber. Furnished with a washer to keep equipment supported if the rubber fails. Temperature range is –20° to 180° F.

Extreme-Temperature Light Duty Vibration-Damping Mounts

These clear silicone gel mounts retain flexibility in temperatures from –40° to 390° F, and won't discolor when exposed to the sun. Use them for protecting fragile equipment, such as electronics, from vibration in light duty compression load applications. All have an unthreaded brass insert. Not rated for deflection.

Vibration-Damping Mounts

Rubber with high-damping qualities provides effective shock protection and a quick return to system equilibrium in compression load applications. Use with precision and electromechanical equipment as well as small pumps and fans. Temperature range is 55° to 105° F. Color is blue.

Oil-Resistant Vibration-Damping Mounts

Made of oil-resistant rubber, mounts isolate vibration, shock, and noise in compression load applications. Install under machines and equipment such as generators, HVAC equipment, electric motors, pumps, and blowers. Temperature range is 10° to 180° F. Rubber is black.

Styles 3, ***5***, and ***6*** can be stacked for additional shock protection. ***Style 6*** base is covered by rubber.

For information about vibration-damping mounts, see page 1374. For information about durometer, see page 3526.

Chemical-Resistant Vibration-Damping Mounts

Made of a specially formulated rubber, mounts withstand exposure to weather and resist oil, antifreeze, and other petroleum-based fluids. Use for long-term service in compression applications such as electric motors, air compressors, and generators. An unthreaded steel insert in the center of the mount provides stability, while steel washers at the top and bottom add support. Temp. range is –40° to 200° F. Rubber is black.

1,150	0.16″	70A	2⅜″	2½″	½″	1¼″	¼″	7145N2	$24.37
1,650	0.22″	88A	1 11/16″	2½″	½″	⅞″	¼″	7145N1	19.93

Bolt-Down Vibration-Damping Mounts

Keep mounts stationary in compression load applications—mounting holes in the flange base allow you to fasten them in place. Mounts provide vibration, shock, and noise isolation for rotating equipment such as fans, blowers, pumps, compressors, and generators. Made of oil-resistant rubber with a steel base. Styles 1-7 have a tapped hole in the center that allows you to use your own threaded rod or bolt; Style 8 has an unthreaded through-hole. Base has two mounting holes, except Style 7 has four holes (fasteners not included).

Fail-safe mounts have an interlocking steel design that keeps the mount intact even if the rubber fails.

Styles 1&2— Temperature range is 10° to 180° F.

Styles 3&4— Mounts are covered in rubber for superior corrosion resistance. The underside of the base has a nonskid surface. *Style 3* have a slotted flange hole. Temp. range is –20° to 180° F. *Style 4* include a bolt and washer. Temp. range is –20° to 225° F.

Style 5— An arch shape provides high deflection and shock isolation. Temperature range is –20° to 180° F.

Styles 6&7— Mounts have a low profile and a high load capacity. Temperature range is 0° to 180° F.

Style 8— Temperature range is 10° to 180° F.

To Order: Please specify capacity per mount where necessary from those listed in the table.

For information about vibration-damping mounts, see page 1374. For information about durometer, see page 3526.

Extreme-Temperature Bolt-Down Vibration-Damping Mounts

Made of silicone, mounts withstand temperatures from –80° to 300° F in compression load applications. All have a flange base with two mounting holes so you can bolt them in place (fasteners not included). Mounts have a tapped hole in the center for use with your own threaded rod or bolt. **To Order:** Please specify capacity per mount from those listed in the table.

Thread	Available Capacities per Mount, lbs. (Durometer)	Deflect. @ Max. Cap.	O'all Ht. (A)	OD (B)	Base Lg. (C)	Base Wd. (D)	Mount. Holes Dia.	Mount. Holes Ctr.-to-Ctr.

Versa-Mount Bolt-Down Vibration-Damping Mounts

Mount in any direction for use in compression and shear load applications. Made of oil-resistant rubber encased in zinc-plated steel for a long service life. Mounts have four mounting holes (fasteners not included). Temperature range is –20° to 180° F.

Spring-Action High-Deflection Bolt-Down Vibration-Damping Mounts

Spring action provides high deflection, which translates to greater isolation of vibration and noise for machines operating as slowly as 500 rpm. Mounts are for use in compression load applications. They have upper and lower cast iron housings that contain a steel spring and prevent horizontal movement of the mount. A layer of rubber between the housings prevents metal-to-metal contact while a rubber pad bonded to the base plate limits movement.

Mounts have two mounting slots (fasteners not included). An adjustment bolt with locking nut lets you use mounts for leveling. For best results, adjust the leveling bolt so that the upper housing is 1/4″-1/2″ above the top of the lower housing. Temperature range is –20° to 180° F.

Inflatable High-Deflection Vibration-Damping Mounts

Connect these compact mounts to your air supply for vibration and shock isolation in compression load applications. They handle the high deflection of equipment such as punch presses, blowers, forging hammers, shakers, vibrators, and air compressors. Add or release air to use these mounts as leveling devices (±1/4″ adjustment). Mounts have four mounting holes (fasteners not included) and a 0.30″ dia. threaded air connection—inflate as you would a bicycle tire. Temperature range is –20° to 180° F.

Mounts are black rubber. They have an aluminum top plate, except 62075K24, K25, and K26 have a steel top plate. All have an aluminum base plate.

For information about vibration-damping mounts, see page 1374. For information about durometer, see page 3526.

Seismic Vibration-Damping Mounts

Limit damage during moderate earthquakes. The mounts have a seismic rating of 1g (acceleration of gravity) and dissipate vibration and noise in compression and shear load applications. They are made of black rubber with a steel housing, come with a cadmium-plated steel cap screw and washer for height adjustment, and have six mounting holes (fasteners not included). Temperature range is –20° to 225°F.

Oil-Resistant Heavy Duty Vibration-Damping Mounts

Made of resilient, black nitrile rubber that withstands oil, these mounts have an aluminum top plate that not only supports heavy loads, but also displaces vibration and shock through the entire mount. Use them in compression load applications with punch presses, milling machines, grinders, and air compressors. Hundreds of suction pockets on the bottom of each mount prevent machine walking. Mounts come with a zinc-plated steel bolt and nut, and have two tapped holes for mounting versatility. Temperature range is –25° to 250°F.

Chemical-Resistant Heavy Duty Vibration-Damping Mounts

The polyurethane base on these mounts resists solvents, gasoline, and oil, while the metal plate sustains heavy loads. Use them in compression load applications to minimize vibration and noise. Temperature range is –80° to 180°F. Base is blue.

Zinc-plated steel plate offers some corrosion resistance. ***Stainless steel plate*** provides superior corrosion resistance.

Vibration-Damping Sandwich Mounts

Style 1

Style 2

Style 3

Diminish vibration, shock, and noise in compression and shear load applications. Mounts have two threaded studs and/or inserts that are sandwiched between black natural rubber or neoprene. Durometer is 50A, unless noted.

Natural rubber has superior resistance to tears and abrasion as well as good flexibility in cold temperatures. Temperature range is –10° to 150°F. ***Neoprene*** has good resistance to weather and acids; moderate resistance to oils. Temperature range is 10° to 180°F.

★ Durometer is 40A. ▲ Durometer is 60A. ♣ Durometer is 70A.

For information about vibration-damping mounts, see page 1374. For information about durometer, see page 3526.

Chemical-Resistant Vibration-Damping Sandwich Mounts

Solvents, acids, and oils are no problem for these mounts. Made of black polyurethane sandwiched between two threaded steel studs and/or inserts, they're excellent for reducing vibration and noise in motors, fans, blowers, pumps, and office machines.

Standard mounts are tough, yet flexible. Use them in compression and shear load applications. Temperature range is 55° to 105° F. ***Extra-soft mounts*** are more flexible than standard mounts. Use them in compression load applications. Temperature range is –20° to 160° F.

Extreme-Temperature Vibration-Damping Sandwich Mounts

In addition to having the widest temperature range of all the sandwich mounts we offer, these resist UV light, ozone, and oxidation. Mounts are made of silicone sandwiched between two threaded, zinc-plated steel studs and/or inserts. Use them to isolate vibration and shock in compression and shear load applications. Temperature range is –80° to 300° F. Color is black for 30A durometer; green for 40A durometer; and orange for 50A, 60A, and 70A durometer.

Extreme-Temperature Wire Rope Vibration-Damping Mounts

With Four Mounting Holes

With Eight Mounting Holes

Mounting Holes for 62225K6, K8 & K14

Mounting Holes for 62225K9

Isolate shock and vibration in harsh temperatures as well as harsh environments. Able to withstand temperatures from –150° to 500° F, these rugged mounts are resistant to corrosion and oils. They're made of stainless steel cable that is wound into aluminum bars, which are chromate coated for additional corrosion resistance. Use them in compression and shear load applications with pumps, compressors, generators, and electronic equipment. Mounts have four or eight mounting holes for installation (fasteners not included).

Extreme-Temperature Stainless Steel Mesh Vibration-Damping Mounts

Tightly layered stainless steel mesh provides superior damping in temperatures from –130° to 500° F. It also offers excellent resistance to corrosion and oils. Use these mounts in compression load applications with HVAC systems, blowers, fans, compressors, gas engines, and electric motors.

To install ***mounts with counterbore hole***, use a standard socket head cap screw (not included).

Precision Equipment Mounts

Allowing deflection in all directions, these ring mounts are made of rubber to protect your equipment from shock and vibration. Often used with electronics, measuring devices, small pumps, and compressors. Mounts are suitable for both compression and shear load applications. Threads are male, and made of zinc-plated steel. Temperature range is –10° to 150° F. Color of ring is black.

About Vibration-Damping Pads

Slide pads under equipment, such as drill presses, milling machines, saws, and air conditioning units, to minimize vibration. Performance is measured by deflection (the distance the pad material moves when subjected to force)—the higher the rating, the greater the vibration isolation. Stack pads for increased deflection; metal shims are recommended between layers.

Before selecting a pad, consider how your machine weight is distributed. If the weight is evenly distributed, use the following formulas to determine the capacity per mounting point in psi.

$$\text{Capacity per Mounting Point} = \frac{\text{Total Machine Weight}}{\text{No. of Mounting Points}}$$

$$\text{psi} = \frac{\text{Capacity per Mounting Point}}{\text{Area (in sq. in.)}}$$

If the weight is unevenly distributed, select the capacity for each mount based on where the weight is concentrated.

Depending on your application, some pad materials are better suited than others. Use this chart to compare the resistance qualities of different materials:

Material	Oil	Weather	Tear	Abrasion
PVC	Fair	Fair	Fair	Fair
Natural Rubber	Poor	Fair	Excellent	Excellent
Recycled Rubber	Excellent	Excellent	Excellent	Excellent
Silicone	Good	Excellent	Fair	Good
Nitrile	Excellent	Poor	Fair	Good
Neoprene	Good	Good	Fair	Good

Chemical-Resistant PVC Vibration-Damping Pads

Made of fiber-reinforced PVC, pads endure exposure to corrosive chemicals, such as ammonium hydroxide (used in cleaning agents and solutions), chlorine, and hydrochloric acid. Pads that are 5/8″ thick also contain cork for increased deflection. Pads have a diamond texture. Temperature range is 32° to 150° F. Color is green.

Tear-Resistant Rubber Vibration-Damping Pads

Natural

Recycled

For excellent durability, try pads made of textured rubber, which resist abrasion and tears. Color is black.

Natural rubber has a waffle design composed of 2″ squares for a suction-cup grip between machinery and the floor. Temperature range is –20° to 180° F.

Recycled rubber provides greater capacity for heavier equipment than natural rubber pads. It offers excellent oil and weather resistance. Pads are textured. Temperature range is –20° to 200° F.

Extreme-Temperature Silicone Vibration-Damping Pads

Able to withstand temperatures from –40° to 375° F, these small pads work well with precision equipment, small pumps, and compressors. Made of silicone gel, pads have a nubby texture on top to secure your equipment, while a smooth bottom grips the underlying surface.

For information about vibration-damping pads, see page 1384. For information about durometer, see page 3526.

Oil-Resistant Nitrile Vibration-Damping Pads

For excellent resistance to oil and solvents, choose nitrile pads.

Rectangular Pads

Temperature range is 5° to 200° F. *Low-damping* pads are black. *High-damping* pads are green.

Oil-Resistant Neoprene Vibration-Damping Pads

Isolate shock and vibration with neoprene pads, which are durable and resist oils, solvents, and weather. Temperature range is 0° to 175° F.

Pads

Color is dark green. *Textured* pads provide stability and a secure grip between your machinery and the floor.

Hydraulic Cylinders with Manual Pump and Hose

Cylinder, Pump, and Wire-Reinforced Rubber Hose

The complete package—each unit includes a steel cylinder, quick-engage hand pump that pumps fast until load is engaged, and 6-ft. hydraulic hose with couplers; a pressure gauge is also included where indicated. Maximum pressure is 10,000 psi (unless noted). Pumps are supplied with hydraulic oil.

Cylinders with hollow ram have an unthreaded hole through the entire length of the ram so you can insert a threaded rod for pulling applications; be sure to secure the rod with a nut.

Nylon pumps have a nylon-covered aluminum base, nylon reservoir, and fiberglass handle. ***Steel pumps*** are all steel, unless noted.

Hydraulic Wedges with Manual Pump and Hose

These powerful wedges get into tight spots for spreading, prying, and opening. ***Complete units*** include a hand pump, a wedge with spring-loaded jaws that close automatically when the pump valve is opened, and a 6-ft. wire-reinforced rubber hose. Maximum pressure for wedges and pumps is 10,000 psi, except the 2988T35 wedge is 8,000 psi.

Hydraulic Cylinder and Pump Sets

10-ton Deluxe Set

All sets contain a cylinder, hand pump, and 6-ft. hose with coupler.

Basic Sets— Also contain a 9″ Lg.×2 11/64″ Wd. hydraulic wedge, rubber head, wedge head, 90° combination head, flat base, cylinder toe, plunger toe, male connector, serrated saddle, and plastic case.

4-ton set also includes six 1 1/4″ dia. ram extension tubes: one each of 3″, 6 1/8″, 8 1/2″, 16 1/2″, 19 1/2″, and 27″ lengths. *10-ton set* also includes four 1 3/4″ dia. ram extension tubes: one each of 4 1/8″, 10″, 18″, and 27″ lengths.

Deluxe Sets— Also contain a 7″ Lg.×2 1/4″ Wd. hydraulic wedge, female lock-on adapter, male lock-on adapter, threaded connector, four locking pins, two lock-on connectors (three in the 4-ton set), two chains with hooks, flexible rubber head (two in the 10-ton set), threaded plunger toe, 90° V-base (two in the 4-ton set), lock-on clamp toe, wedge head, flat base, chain plate, clamp head, and metal case.

4-ton set also includes six 1 3/64″ dia. ram extension tubes: one each of 3″, 6″, and 18″ lengths; three of 15″ length. Meets MIL-A-A-314. *10-ton set* also includes a spreader toe and collar toe, plus four 1 21/32″ dia. ram extension tubes: one each of 6″, 12″, 15″, and 18″ lengths. Meets MIL-A-A-313.

Note: When the extension tubes and/or offset attachments are used, the rated capacity is reduced by 50% for each tube or attachment connected.

Hydraulic Cylinders

Use these steel hydraulic cylinders either vertically or horizontally. Maximum pressure is 10,000 psi, except *Style 1* is 5,100 psi. To calculate applied force in lbs., multiply the effective area (sq. in.) by the pressure (psi) you are using. Cylinders are furnished without mounting fasteners.

Cylinder with manual-return solid ram (Style 1) is only for use with 2942T6 pump on this page and 2916T7 hose (see page 1389).

Cylinders with a hollow ram (Style 3) have an unthreaded hole through the entire length of the ram so you can insert a threaded rod for pulling applications; be sure to secure the rod with a nut.

★ With adjustment screw fully extended. ♠ Use collar threads to mount cylinder in a fixture or use them with mounting plates.

Manual Hydraulic Pumps

Use these pumps with the steel cylinders sold separately on this page. Handle is approximately as long as the overall length. Use horizontally; they can also be used vertically, however the pump head (where the handle meets the pump) must be pointed downward. Max. pressure is 10,000 psi. Pumps are supplied with hydraulic oil; mounting fasteners not included.

To determine how many strokes it will take to make the ram travel one inch, divide the effective area (sq. in.) of your cylinder by the oil flow (cu. in.) per stroke of the pump.

Quick-engage pumps pump fast until load is engaged.

Foot/Hand-Operated Pump (Style C)— Has a spring-return foot pedal with a 2 7/8″ Lg. × 2 3/4″ Wd. pad.

♦ For use only with 2990T14 cylinder on this page and 2916T7 hose (see page 1389).
■ Requires either 2916T4 or 2916T24 hose (see page 1389) to connect to cylinders on this page.

Warning! These products should not be used to support people or loads over people.

Electric-Powered Hydraulic Pumps

Operate these pumps from up to 10 feet away with the included wired remote. They work in the vertical position only and allow you to raise, hold, and release manual-return and spring-return cylinder rams. Maximum pressure is 10,000 psi. Mounting fasteners are not included. Pumps are supplied with hydraulic oil.

Style A—Has a composite reservoir with a handle and an aluminum cover plate. Motor is 115 VAC, 50/60 Hz, draws 9.5 amps, and has a 6-ft. power cord with three-prong plug.

Style B—Made of steel and aluminum. Motor is dual voltage (115/230 VAC, 60 Hz) wired for 115 VAC, draws 25 amps, and has an 8-ft. power cord with a three-prong plug that fits a NEMA 5-20 receptacle (see page 787 for illustration).

Air-Powered Hydraulic Pumps

Count on air power where electricity is unavailable or impractical. These pumps have a hand/foot-operated three-position pedal to raise, hold, and release manual-return and spring-return cylinder rams. Maximum pressure is 10,000 psi. Supplied with hydraulic oil.

Styles C and ***E*** are made of steel and aluminum. Mounting fasteners are not included. ***Style D*** is made of steel and aluminum with a composite reservoir. It includes an oil sight gauge and mounting fasteners.

■ Threads are NPT.

Harsh Environment Cylinders, Manual Pumps, and Valves

Wet, hot, corrosive environments are no match for these cylinders, pumps, and valves—all have seals that withstand temperatures from –40° to +392° F. Mounting fasteners are not included.

Cylinders have a spring-return ram. They have a nickel-plated steel body, ram, and saddle, along with stainless steel bolts and pins and a bronze piston and bearings.

Pumps are quick-engage style, so they pump quickly until load is engaged. They have a nylon-encapsulated base, an anodized aluminum reservoir, fiberglass handle, and stainless steel hardware. Supplied with hydraulic oil.

Valves have a nickel-plated steel body. *Pressure-relief valve* opens whenever the set pressure is reached. *Manual check valve* is for load-holding applications; the valve has to be manually opened.

Special Application Hydraulic Hand Pumps

Small Footprint with Reservoir

Small-footprint pumps are taller than they are long to fit into tight spaces. Made of cast iron, they have a 19 1/4″ long handle and must be bolted in place for stability. Mounting fasteners are not included. *Pumps with reservoir* operate in the vertical position only and are supplied with oil. *Pumps without reservoir* can supply backup manual power and can also be tapped into an existing system with a reservoir. They operate in any position.

Quick-engage pump is supplied without oil, so it's a great choice for applications where standard hydraulic oil is not acceptable. Use with biodegradable food-grade hydraulic oil (sold separately; see page 2174 for more information about this and other types of hydraulic oil). The pump is quick-engage style, so it pumps fast until the load is engaged. It has a nylon-encapsulated aluminum body, nylon reservoir, and 20 1/2″ long fiberglass handle. Use horizontally and vertically.

Note: For vertical use, the pump head (where the handle meets the pump) must be pointed down.

Warning! ***These products should not be used to support people or loads over people.***

Hydraulic Pump and Cylinder Accessories

All hydraulic accessories have a maximum pressure of 10,000 psi.

Hydraulic Hose with Fittings

Hose has male threads on one end and a male thread-connect coupler with dust cap (unless noted) on the other.

Black rubber hose is reinforced with two layers of braided steel.

Yellow thermoplastic hose is designed for long life and abrasion resistance. This hose consists of four layers: polyamide inner core, two steel wire braids, and a polyurethane outer jacket.

Hose Ends, NPTF	O'all Lg.	Black Rubber		Yellow Thermoplastic

♦ Does not include a dust cap.
▲ For use only with 2990T14 cylinder and 2942T6 pump (see page 1387).

Hydraulic Manifolds

4-Port Manifold

6-Port Manifold

Operate multiple cylinders from a single pump. Manifolds are made of steel.

4-port manifold comes with four control/shut-off control valves, an 18" rubber hose, gauge port, and mounting fasteners. Connections are 3/8" NPTF female. Two or more manifolds can be joined for larger systems.

6-port manifold has a hexagon shape with six 3/8" NPT female ports (one port is for the pump). Includes four plugs to cover ports not in use. Mounting fasteners are not included.

Hydraulic Couplers

Thread Connect

Quick Connect

Connect a hose and cylinder, or hose and pump. Couplers consist of male and female halves and include a dust cap for the female half.

Thread Connect— Thread the sleeve of the male half into the female half for a tight connection.

Quick Connect— Simply push the male and female halves together for a fast, leak-free connection.

	Connections, NPTF		
Thread Connect	1/4"	2941T12	$46.06
Thread Connect	3/8"	2941T11★	46.21
Quick Connect	3/8"	2941T13	174.27

★ Includes dust cap for both the male and female halves.

Hydraulic Pressure Gauges and Adapter

Pressure Gauge with Adapter

Monitor pressure levels to guard against overload. These liquid-filled gauges measure from 0-10,000 psi with a red warning zone beyond 10,000 psi. They have a Type 303 stainless steel case. Full scale accuracy is ±1%. Operating temperature is –30° to +150° F.

Gauge Adapter— Required for inline mounting of gauge. Made of steel, it's 4 1/4" long with a 1/4" NPTF female connection for the gauge and 3/8" NPTF connections at either end (one male, one female).

Gauge Dia.	Graduations psi/bar	Connections, NPTF		
2 1/2"	500/50	1/4" Male	2965T5	$74.73
4"	500/50	1/4" Male	2965T6	138.95
Gauge Adapter			2965T7	41.18

Hydraulic Valves

Control/ Shut-Off Valve

All are made of steel.

Control/shut-off valves are needle style. Use them to control the speed of ram retraction, or shut off to hold the load. ***Manual check valve*** is for load-holding applications; the valve has to be manually opened. ***Pressure relief valve*** opens whenever the set pressure is reached.

Valve Type	Connections, NPTF		
Control/Shut Off	1/4" Female, 1/4" Female	2983T18	$116.38
Control/Shut Off	3/8" Female, 3/8" Female	2983T41	94.62
Manual Check	3/8" Female, 3/8" Female	2983T19■	273.23
Pressure Relief	3/8" Female♣	2983T21	315.06

■ Connections are NPT. ♣ Has three ports (two in and one out).

Cylinder Ram Saddles and Threaded Adapters

Serrated with Threaded Adapter

All are made of ductile iron with a black powder-coated finish. A ***threaded adapter*** is required for mounting saddle into a cylinder ram.

For Cylinder Sizes	O'all Size		
Smooth Saddles			
5 Ton	1 5/16" Dia. × 1 1/8" Thick.	2983T24	$45.61

Warning! ***These products should not be used to support people or loads over people.***

Wheeled Hydraulic Jacks

Roll these jacks from job to job and quickly position them under a load. All have a spring-return ram and are supplied with hydraulic oil.

Manually Operated Jacks (Style 1)—*Aluminum* has two 2¼″ dia. and two 2″ dia. wheels. *Steel* has two 2¼″ dia. and two 3½″ dia. wheels. *Steel quick-lift jack* requires just one pump of the handle to raise the saddle to the load; the handle must then be pumped to lift the load. It has two 2¼″ dia. and two 3″ dia. wheels.

Air-Operated Jack (Style 2)—Air power raises loads quickly and effortlessly. It operates on 90-175 psi of air pressure and has a ¼″ male quick-connect air inlet, a 4-ft. long air hose, and a remote control pendant. Jack rolls on two 7⅞″ Dia. × 1¾″ Wd. wheels.

Wheeled Hydraulic Jacks with Support Cradle

1,200-lb. Capacity

These jacks have a cradle that tilts forward, backward, and side-to-side plus adjustable corner brackets for precise adjustments and perfect alignment. They roll on four 3″ dia. swivel casters. The handle rotates 360° to operate in any position. They are supplied with hydraulic fluid as well as chains and brackets to secure heavy equipment to the cradle.

Cap., lbs.	Min. Ht.	Max. Lift	Max. Ht.	Cradle Size, Lg. × Wd.	*Cradle Degree of Tilt* Front	Back	Side	Base Size, Lg. × Wd.	Handle Lg.

High-Lift Hydraulic Jacks

Combining high minimum heights with an extra long stroke, these steel jacks provide maximum height where high lifts are required. Jacks must be bolted down for proper use. All are supplied with hydraulic fluid.

Foot-operated jacks have two foot pedals for hands-free use: a folding 14″ Lg. × 2⅞″ Wd. pedal for raising the ram and an 8 13/16″ Lg. × 1½″ Wd. pedal for rapid lowering of the ram. All have two 11/32″ mounting holes in the base (mounting fasteners not included). They operate in a vertical position only.

Hand-operated jacks have a manual-return ram. The ram tip has a ½″ dia. hole (⅝″ dia. on 2923T41) for securing equipment to the ram. All have two ⅜″ mounting holes in the base except 2923T41, which has two 13/32″ holes (mounting fasteners not included). They operate in a vertical position only.

Repair Kits—Contain parts that are subject to wear such as O-rings, washers, seals, and springs.

Wet-Environment Compact Hydraulic Jacks

Suitable for use in washdown applications, these steel jacks can even be used under water. They have a manual-return ram as well as a completely sealed hydraulic system that allows them to be used in any position. Great for jobs where space is limited. The handle rotates 360° for use in any position.

Jacks with hollow ram have an unthreaded hole through the entire length of the ram so you can insert a threaded rod for pulling applications; be sure to secure the rod with a nut.

Hydraulic Dual-Lift Toe/Saddle Jacks

5-Ton Capacity

Twice as versatile as other bottle jacks—these steel jacks lift from the low-profile toe or from the saddle when you need a large surface area for more stable lifting. Supplied with hydraulic fluid.

Jacks with spring-return ram have a 360° turn lever socket for pumping the handle in any direction.

Hydraulic Bottle Jacks

1

2

3

4

5

The pump, cylinder, and other components are contained in a single bottle-shaped steel housing. All jacks have a manual-return ram. The saddle is the same size as the ram, except where noted. The bases do not have mounting holes. Supplied with hydraulic oil. Use these jacks either vertically or horizontally. *Note:* When used horizontally, the pumping mechanism (where the handle meets the jack) must be positioned under the jack body in order for jack to operate.

(1-4) Manually Operated— All include a removable handle.

(2) Heavy duty jacks are ruggedly constructed for long life in demanding applications. *3- to 30-ton jacks* have a nickel-plated ram, a black-phosphate coated adjustment screw, and black-oxide coated piston and release valve. Meet MIL-A-A-381. *60-ton jack* is black-phosphate coated and meets Part Two of ASME-PALD-2005 (Portable Automotive Lifting Devices).

(3) Low-profile jacks pump from side to side instead of up and down, so they don't require a lot of vertical space. They are shorter than the other bottle jacks to fit in tight spaces.

(4) Telescopic jacks have a telescopic ram that provides the highest maximum lift of all of our bottle jacks to quickly and efficiently raise a load to the height you want.

(5) Air-Operated Jacks— Air operation means you can use these jacks at a safer distance from the load, plus avoid the work of manually pumping the handle to lift the load. When an air supply is unavailable, the 12-, 20-, and 30-ton jacks can be operated manually by pumping the included handle. All jacks have a 4-ft. long air hose with a 1/4″ female quick-connect fitting. They operate on 90 to 175 psi of air pressure.

♦ Temperature range is +10° to +180° F. ★ Refers to the saddle diameter because the saddle is larger than the ram.

Ratchet Dual-Lift Jacks

Vertically lift your load from the toe or the saddle of these versatile jacks—the choice is up to you. The ratchet action allows you to raise or lower the load one notch at a time; when the jack is not loaded, the notches can be bypassed for quicker raising and lowering. All have a large, stable base (the bases do not have mounting holes) and a two-position handle socket so you can get the best angle for lifting. All are supplied with a steel handle.

Aluminum— Lighter than steel for easier handling.

High-Lift Ratchet Jacks

These jacks offer the highest lifting height of all our mechanical jacks, yet require only 4½″ to get under low loads. Use them to lift, spread, push, pull, and clamp. For clamping, position the clevis horizontally (see inset); it has a maximum clamping force of 750 lbs. and a 1½″ Ht.×1¼″ Wd. opening.

Jacks are ductile iron and have a 30″ long steel handle. Toe is 4½″ Lg.×1⅜″ Wd. Base is 7″ Lg.×4″ Wd.

Note: Load jacks with at least 150 lbs. When loaded with less than 150 lbs., the notches are bypassed and the load drops freely. When loaded with at least 150 lbs., jacks lower in a safer manner of one notch at a time. Designed to prevent the lifting mechanism from dropping an overweight load.

♦ Capacity is 2¼ tons from 4½″-48″ of the overall height.

Screw Jacks

With Optional Turning Bar

Lift and support machinery and equipment with these multipurpose jacks. The jack head has four openings so you can choose the best angle for inserting the optional turning bar (sold separately). A welded stop prevents overextension of the screw.

These flared-base jacks are housed in ductile iron and have a drop-forged steel serrated saddle that pivots and rotates to keep loads from slipping.

Optional turning bars are made of steel.

Leveling Screw Jacks

Designed for permanent installation, these screw-style jacks lift platforms and other equipment to the required height and hold them in place. To install, drill a 1¼″ dia. hole through the platform or frame of your equipment and bolt it between the upper and lower flanges of the jack's divided housing. Flanges are 3⅝″ Dia.×⅛″ Thick. and have six ¼″ dia. mounting holes on a 3″ circle. Screw dia. is 1¼″.

Jacks are steel with a polished chrome finish and have an 8½″ long handle that folds down when not in use. They stand on a 3⅞″ dia. base that swivels and rotates and has a slip-resistant rubber pad.

Jack Pads

Don't let a soft surface such as dirt or asphalt hinder your lifting jobs—these pads provide a solid surface for jacks as well as outriggers. Use them with vertical loads and loads angled up to 45°. Made of polyethylene with a ½″ dia. nylon rope handle, pads are resistant to moisture, chemicals, and oil. Temperature range is –40° to +180° F.

Miniature Screw Jacks

Nonswivel Saddle

Swivel Saddle

Compact enough to use in confined spaces, these jacks are ideal for leveling surface plates, machinery, and storage tanks. When jacks are loaded, height can be adjusted with a wrench. Made of steel.

With Nonswivel Saddle—Also known as a spreader jack, this model has a serrated saddle that rotates.

With Swivel Saddle—Also known as planer jacks, these models have a smooth saddle that swivels and rotates. A locking screw keeps jacks extended and prevents lowering due to vibration.

Scissor Jacks

Hydraulic

Mechanical

The scissor design allows these jacks to fit under low-height loads.

Hydraulic—Pump the handle of this self-contained jack and its hydraulic power quickly lifts the load. The saddle accepts vehicle panel rails. When fully lowered, the overall size is 15 5/16″ Lg.×4⅜″ Wd.×4 9/16″ Ht. The handle is removable, has a rubber grip, and is 14¾″ long.

Mechanical—When fully lowered, overall size is 10½″ Lg.×4¼″ Wd.×4¼″ Ht. Lift the load by turning the included 23½″ long handle. Base has two ⅜″ dia. mounting holes (fasteners not included).

Jack Stands

Handle Lock

12-ton Pin Lock

20-ton Pin Lock

Once you've raised a load, support it with these steel jack stands.

Note: Always use stands in pairs and on a hard flat surface.

Handle Lock—The handle engages the ratchet bar to lock the load in place. Height adjusts in ⅝″ increments.

Pin Lock—Insert the included steel pin through the riser (or through the riser and base on 8059T14) to support the load. Height is adjustable in 1½″ increments for the 12-ton stands and in 3″ increments for the 20-ton stands.

Mountable Jacks with Foot Plate

Mount to the frame of your equipment—the foot plate holds the load in position. Jacks with a *top crank handle* require additional clearance but the handle locks down out of the way when not in use. All have a round body, unless noted. The (A) dimension is the distance above the mounting point; (B) is the distance below.

Swivel Plate Mount—Weld the included 4″×5″ (unless noted) mounting plate to your equipment then attach the jack to the plate. Mount allows jack to be swiveled 90° out of the way and locked into position.

Swivel Tube Mount—Weld the included 2″ dia. tube-style mount to your equipment then attach the jack to the mount. The mount has four holes at 90° positions so you can insert the pin to lock the jack in position.

Swivel Plate Mount ***Swivel Tube Mount*** ***Fixed A-Frame Mount***

Fixed A-Frame Mount—Bolt or weld the 5⅛″×4″ triangular mounting plate to the inside of an A-frame trailer coupler. Mount improves stability because it better centers the load. It has a 2¼″ ID center hole and three 7/16″×13/16″ slotted mounting holes (mounting bolts not included).

Mountable Jacks with Caster

Mount these jacks onto the frame of your equipment for an easy way to move and position your load. All include a swivel caster with a 6″ Dia.×2″ Wd. polypropylene wheel (unless noted), a side crank handle, and mounting fasteners (unless noted). The (A) dimension indicates the distance above the mounting point; (B) is the distance below the mounting point except *Style 8*, which has an adjustable mounting point.

(6) Swivel Mount—A pin in the mounting plate locks the jack in a vertical position; simply pull the pin to rotate the jack 90° into a horizontal position when not in use.

(8) Fixed Mount, Rack-and-Pinion Design—Self-locking worm gear greatly reduces cranking effort.

(9) Fixed A-Frame Mount—Bolt or weld the 5⅛″×4″ triangular mounting plate to the inside of an A-frame trailer coupler. Mount improves stability because it better centers the load. It has a 2¼″ ID center hole and three 7/16″×13/16″ slotted mounting holes (mounting bolts not included).

Warning! **These products should not be used to support people or loads over people.**

Mini Vertical Brace

The perfect size for supporting loads in low-height spaces. This brace has a steel rod inside of a steel post; height is adjusted easily with a quick-release knob. It has a 12½″ Lg.×5½″ Wd. plastic top plate with eight 3/16″ dia. mounting holes. It also has a 5½″ square plastic base plate with two 3/16″ dia. mounting holes. Mounting fasteners are not included.

Optional extensions provide additional height when needed.

Note: Only one extension can be used at a time.

2-ft. Length (Capacity is 400 lbs. up to 43″)					28965T42	25.48
3-ft. Length (Capacity is 400 lbs. up to 55″)					28965T43	28.16

Quick-Set Vertical Braces

Optional Mounting Plate

Braces set up in seconds and can be easily moved from job to job. Made entirely of steel, they have a 1⅞″ dia. rod that slides inside a 2⅜″ dia. post; both have holes spaced in 4″ increments. Extend the rod to the approximate height and insert the pin into a hole. A ring at the top of the brace permits adjusting within 2″ of your required height. Make final height adjustments by turning the 11″ long handle.

Braces have a 6″ square top plate and base plate, both with four 9/16″ dia. mounting holes (fasteners not included).

Note: Do not use for lifting.

Optional mounting plates secure and stabilize either the rod (top) or the post of the brace.

High-Capacity Vertical Braces

Designed for permanent installation, these braces support beams and joists. They have a 2⅜″ dia. steel post that's notched in 4″ increments. Simply extend the post to the approximate height and slide the included safety lock ring into the notch to hold the post in place. Make final height adjustments by turning the 10″ long steel handle.

Braces have a 4″ square top plate and base plate, both with two 3/8″ and two 5/8″ dia. mounting holes (fasteners not included).

Note: Do not use for lifting.

Extendable Side Braces

Shore up trenches when installing pipes, cables, and other buried equipment. Braces are made of steel and malleable iron and can be used in permanent installations. Each end of the brace has a ball and socket joint that tilts up to 10° for angular shoring as well as spikes that dig in for a tight grip.

8-ton braces have 3″ Lg.×6″ Wd. ends and a 1⅜″ dia. screw. They include a pipe that can be replaced with a longer piece of Schedule 40 pipe up to 40½″ long. ***13-ton braces*** have 4″ Lg.×8″ Wd. ends and a 1⅞″ dia. screw. They include a pipe that can be replaced with a longer piece of Schedule 40 pipe up to 50″ long.

Inflatable Air Wedges

Thin enough to fit even the smallest spaces. Made of reinforced vinyl, these wedges are commonly used by locksmiths to separate a car door from its frame. To use, slip wedge between two objects and squeeze the bulb to inflate; a release valve deflates it.

Wedge Size, Lg.×Wd.	Deflated Ht.	Inflated Height		
6¼″×5¾″	5/64″	2¾″	3833T43	$40.85
11″ ×5⅛″	5/64″	2¾″	3833T44	48.75

Air-Powered Lifting Bags

Lifting Bag Shown with Hose and Control Unit

Just place these bags under your load and inflate. They require only 1″ of clearance and work well on soft ground and under water.

Bags are made of neoprene with six layers of aramid fabric reinforcement. They have male quick-connect couplings; maximum air pressure is 118 psi. Operating temperature is –40° to +150° F. A limit of two bags can be stacked for added height.

For a complete lifting system, you'll need a bag, a push-button control unit, and an air hose (all sold separately). Fittings on the control unit and air hose are designed to fit this lifting system only.

Components—*Push-button control unit* allows precise inflation and deflation of bags. It has three female quick-connect couplings (one is for the air hose). *Air hose* is 3/8″ dia. and has a female quick-connect coupling on one end and a male nipple on the other end. To connect the air hose to the air supply, use the *dual male-end quick-connect adapter with shut-off valve*. It has a ¼″ NPT×¼″ NPT connection to fit your air supply. If shop air is not available, use the *foot/hand pump* to manually inflate the bags.

Air-Powered Jacks

4200T5

Use your air supply to raise and lower loads. Jacks have an internal steel telescoping shaft that provides vertical and lateral stability. The saddle rotates 360° for easy positioning and has a cross-shaped groove for holding cylindrical parts.

Jacks are steel with a powder-coated finish. Bladders are rubber. Furnished with two carrying handles and a female ¼″ NPT air valve. Max. temperature is 120° F. Max. air pressure is 105 psi.

Note: Use on a solid, flat surface. Base must be parallel to the lifting point.

Air-Powered Lifters and Positioners

With Optional CO_2 Tank

Simply hook up to your air supply or to a CO_2 tank and you're ready to lift. Units have a hand control that activates the up/down action, along with a 16-ft. air hose and a male 1/8″ quick-connect coupling. Made of high-strength aluminum, they have swivel casters with 5″ Dia.×1¼″ Wd. polyurethane wheels and wheel locks; legs fold out of the way for easy storage.

Optional CO_2 tank attaches to the base of these units. A full tank will provide approximately 30 lifts at maximum height and load capacity.

Warning! ***These products should not be used to support people or loads over people.***

Chain Wheels for Overhead Valves

Operate overhead valves right from the floor. The wheels consist of a sprocket rim with chain guide arm. You can attach them to almost any standard handwheel-operated valve with the included attachment set. Use with single-loop, coil-style, hot-galvanized steel chain (not included; see page 1402).

Aluminum wheels have an aluminum guide arm. They're lightweight, strong, and corrosion resistant.

Cast iron wheels have a malleable iron guide arm and are for general purpose use.

Ductile iron wheels have a malleable iron guide arm. These heavy duty wheels include a hammer-blow plate (unless noted). The plate withstands heavy impact for releasing large and stubborn valves. Attach to the valve wheel with lugs so the rim can rotate about 1/3 revolution in either direction before impact. Spokes on the sprocket then contact lugs on the plate, causing the valve to open or close.

Galvanized wheels are for high-moisture environments. Attachment set is galvanized steel.

♦ Without hammer-blow plate.

Pulls

Operate overhead doors, ventilators, skylights, and more with these manual pulls.

To Order: Please specify length: 1, 2, 5, or 8 ft.

Rope pull is made of braided nylon rope with a white nylon ball on one end. Offers good strength in light duty applications. Not load rated.

Sash chain pulls are made of metal chain and have a split ring on each end. They offer greater strength in heavier applications than rope pulls. Not load rated. See page 1400 for actual size of chain.

Utility chain pulls are the strongest pulls we offer. They are made of welded steel and have an end fitting on one end.

Rope Ends and Stops

Screw-on ends consist of a hard nylon fitting and a Type 316 stainless steel screw (included). The screw threads into the end of the rope, forcing it against the specially molded fitting for a strong connection. Use with twisted or braided nylon and polyester ropes. Color is black. Maximum temperature is 240° F.

For Rope Dia.	Pkg. Qty.		Pkg.
5/16″	10	3382T11	$8.52

Alloy Steel Chain—For Lifting

Grade 120

Attack your lifting jobs with confidence. This durable alloy steel chain is available in a variety of grades. Choosing a higher grade not only gives you a stronger chain, but also a smaller, lighter chain for a particular work load limit. Chain is welded and heat treated.

Note: When using fittings on the chain, be sure to match the grade and trade size. For fittings, see pages 1423-1438.

Grade 120— The strongest chain we offer. It's approximately 20% stronger than Grade 100 chain and about 50% stronger than Grade 80 chain. Plus, it has the highest strength-to-weight ratio, which allows you to use a smaller chain size for your application and reduces the weight of your lifting assembly. Links are rounded on the inside and square on the outside so wear spreads evenly across the contact points. Maximum temperature is 400° F.

Grade 100— This chain is approximately 25% stronger than Grade 80 chain. It's made in accordance with NACM (National Association of Chain Manufacturers) standards and is stamped with NACM grade designation. Maximum temperature is 400° F. Meets ASTM A973 specifications.

Grade 80— The most common chain for lifting. Chain is made in accordance with NACM (National Association of Chain Manufacturers) standards and is stamped with NACM grade designation. Maximum temperature is 400° F.

Grade 63— Withstands higher temperatures than any other alloy steel chain. Maximum temperature is 500° F.

Blue powder-coated and ***painted*** finishes provide corrosion resistance. ***Zinc*** and ***black super-corrosion-resistant*** finishes provide better corrosion resistance than the other finishes.

To Order: Please specify length from those listed.

Wear Gauge for Grade 100 and Grade 80 Chain— Gauge measures the maximum allowable wear tolerances on links of Grade 100 and Grade 80 alloy steel chain, as required by OSHA. If the gauge can be inserted over any part of the link, then the chain should be taken out of service. For use on chain sizes: 7/32″, 9/32″, 3/8″, 1/2″, 5/8″, 3/4″, 7/8″, 1″, and 1 1/4″.

3831T38 ..... $4.62

Corrosion-Resistant Grade 50 Stainless Steel Chain—For Lifting

Made of Type 316L stainless steel with a polished finish, this Grade 50 chain is welded and resists rust, diluted acidic solutions, salt water, and pitting, including pitting caused by phosphoric and most acetic solutions. Maximum temperature is 750° F.

Note: When using fittings on the chain, be sure to match the grade and trade size. For fittings, see pages 1423-1438.

To Order: Please specify length from those listed.

Warning! **Never exceed work load limits.**

Steel Chain—*Not for Lifting*

The higher the grade, the stronger the chain—choosing a higher grade also gives you a smaller, lighter chain for a particular work load limit. Chain is welded. Maximum temperature is 400° F (unless noted).

Note: When using fittings on the chain, be sure to match the grade and trade size. For fittings, see pages 1423-1438.

Grade 70—Also known as transport chain and System 7 chain, this chain is approximately 20% stronger than Grade 40/43 chain and about 60% stronger than Grade 30 chain. Ideal for load binding, towing, and logging jobs. The links are heat treated. Chain is made in accordance with NACM (National Association of Chain Manufacturers) standards and is stamped with NACM grade designation. Meets D.O.T. 49 CFR, 393.102.

Grade 40/43—Also known as high-test chain, binding chain, and System 4 chain, this chain is approximately 50% stronger than Grade 30 chain. Use for load binding, tie downs, and towing. Chain is made in accordance with NACM (National Association of Chain Manufacturers) standards, and is stamped with NACM grade designation.

Grade 30—Also known as proof coil chain, this chain is ideal for applications that don't require the greater strengths of Grade 70 and Grade 40/43. Ideal for tailgates, towing, tie downs, and logging jobs.

Zinc-plated, cold-galvanized, and ***hot-galvanized*** finishes provide some corrosion resistance. ***Poly-coated*** finish minimizes scratching and damage to items that come in contact with the chain.

To Order: Please specify length from those listed.

★ Maximum temperature is 200° F.

Warning! ***Never exceed work load limits; never use for lifting.***

Short-Link Grade 30 Steel Chain—Not for Lifting

Shorter welded links make this steel chain more flexible than our other Grade 30 steel chain. Maximum temperature is 400° F.

Note: When using fittings on the chain, be sure to match the grade and trade size. For fittings, see pages 1423-1438.

Hot-galvanized finish provides some corrosion resistance.

To Order: Please specify length from those listed.

Corrosion-Resistant Chain—Not for Lifting

This is the welded chain you need in applications where corrosive conditions and weather can deteriorate ordinary chain.

Brass— In addition to being corrosion resistant, this brass Alloy 260 chain is also nonmagnetic and nonsparking. Good for light to medium duty material handling in hazardous areas and suitable for barrier chain, decorative purposes, and suspending fixtures.

Aluminum— This aluminum-magnesium Alloy 5056 chain is nonmagnetic, nonsparking, and resists corrosion from salt water, food, and many chemicals. Excellent for chemical and food processing. It's also rustproof, lightweight, and easy to handle.

Type 304L Stainless Steel— Has good resistance to atmospheric corrosion.

Type 316L Stainless Steel— Has superior corrosion resistance compared to Type 304L chain. Ideal for chemical and food processing applications.

To Order: Please specify length from those listed.

Cut-Resistant Security Chain—Not for Lifting

Steel

Alloy Steel

Secure your tools and other valuable equipment with confidence—chain is welded, heat treated for strength, and case hardened for maximum cut and wear resistance. Chain is not load rated.

Steel— Links are extremely abrasion resistant.

Alloy Steel— For maximum security, this chain has square links, which make it difficult to cut with bolt cutters.

Zinc-plated finish provides some corrosion resistance. ***Gray poly-coated*** finish minimizes scratching and damage to items that come in contact with the chain.

To Order: Please specify length from those listed.

General Utility Steel Chain—Not for Lifting

This economical welded steel chain is flexible and strong. Great for tailgates, barrier chain, guard chain, agricultural implements, and industrial equipment.

Straight-Link Chain—Has short, wide links that minimize kinking and tangling. It also has a slightly higher work load limit than twisted-link chain. For plastic straight link chain, see page 1911.

Twisted-Link Chain—Has long, slightly narrower twisted links that lie flat.

Machine chain has smaller links than coil chain and is designed for tight spaces. ***Coil chain*** has longer links than machine chain. *Zinc-plated* and *hot-galvanized* finishes provide some corrosion resistance. *Poly-coated* finish is bright yellow and offers high visibility making it great for marking off restricted areas. It also minimizes scratching and damage to items that come in contact with the chain.

To Order: Please specify length from those listed.

Tangle-Resistant Chain—Not for Lifting

Get maximum resistance to kinking and tangling with this highly flexible welded chain. It's great for tie downs, animal control chain, suspending fixtures, and any application where a change in direction might cause tangling.

Straight-Link Chain—Also known as passing link chain, this chain has links that revolve around each other and change direction easily to reduce kinking and tangling. *Zinc-plated* finish provides some corrosion resistance.

Twisted-Link Chain—Also known as curb chain, this is the most flexible chain we offer. *Type 304 stainless steel chain* offers greater corrosion resistance than steel chain.

To Order: Please specify length from those listed.

Warning! ***Never exceed work load limits; never use for lifting.***

Snag-Resistant Steel Chain—Not for Lifting

Also known as end-welded sash chain, this steel chain is designed so the sides are smooth, making the chain flexible and resistant to snagging and kinking. Use for barriers and suspending fixtures. *Trade size 1/8″* is also known as heel coil chain.

Zinc-plated, brass-plated, and ***nickel-plated*** finishes provide some corrosion resistance.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

All chain is weldless and has a flat profile. ***Miniature flat link*** is ideal as a general utility chain. ***Flat link*** chain is designed for use over pulleys and for counterbalanced, double-hung window sashes.

Stainless steel offers superior corrosion resistance. ***Nickel-plated, zinc-plated,*** and ***copper-plated*** finishes provide some corrosion resistance.

To Order: Please specify length from those listed. The last length listed is the max. continuous length.

★ Type 302 stainless steel.

Warning! Never exceed work load limits; never use for lifting.

Flat-Link Plumbers' Chain—Not for Lifting

Also known as safety chain, this weldless chain has flat links that take up little space and fold back on themselves for maximum flexibility. Ideal for plumbing fixtures and general utility applications.

Type 302 stainless steel offers superior corrosion resistance. ***Aluminum*** is corrosion resistant and lighter in weight than the other chain. ***Nickel-plated*** and ***zinc-plated*** finishes provide some corrosion resistance.

To Order: Please specify length from those listed. The last length listed is the max. continuous length.

Illustrations are actual size.

Single-Jack Chain—Not for Lifting

The links of this weldless chain are formed into a figure eight and then twisted into a 90° angle for an extremely lightweight chain with a small diameter. Suitable for light duty suspending applications.

Type 304 stainless steel offers superior corrosion resistance. ***Zinc-plated, nickel-plated,*** and ***brass-plated*** finishes provide some corrosion resistance.

To Order: Please specify length from those listed. The last length listed is the max. continuous length.

Illustrations are actual size.

Warning! ***Never exceed work load limits; never use for lifting.***

Register Chain—Not for Lifting

Chain has two cut ends on each link that interlock with the loop on the next link, making this weldless steel chain stronger than single-jack chain for light duty suspending. Chain is also used for furnace ducts and ventilation registers.

Zinc-plated finish offers some corrosion resistance.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Single-Loop Coil Chain—Not for Lifting

Also known as lock-link chain and babbitt chain, this weldless steel chain is stronger than the other weldless chains we offer. It's perfect for operating overhead doors, transoms, ventilators, skylights, machinery, and valve-wheel-activated mechanisms (see 9765K on page 1395 for chain wheels).

Trimmed Links— The link connector is cut to allow better seating in a sprocket or valve wheel.

Wrapped Links— The link connector wraps all the way around each link, making the chain slightly stronger than trimmed-link chain.

Zinc-plated and ***hot-galvanized*** finishes provide some corrosion resistance.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Double-Loop Coil Chain—Not for Lifting

Ideal for many general-purpose applications, this weldless chain is widely used for tethering and hanging light fixtures.

Zinc-plated and ***hot-galvanized*** finishes provide some corrosion resistance. ***Poly-coated*** finish offers high visibility and minimizes scratching and damage to items that come in contact with the chain.

Zinc-plated steel with vinyl sleeve is covered by a transparent vinyl sleeve to reduce rattling and prevent marring and scratching on finished surfaces. ***Type 304 stainless steel*** offers superior corrosion resistance.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Quick-Connect Round Bead Chain—Not for Lifting

Bead Chain—Also known as ball chain, versatile bead chain can be used as a retainer to keep tools with machines, keys with chucks, as well as gas and dust caps with tanks. Chain swivels at each bead to resist tangling and kinking.

Fittings—All are size-compatible with the chains. Package quantity is 100, unless noted.

End couplings are used to attach gas and dust caps to the chain with a screw, bolt, or rivet. Hole diameter for trade size Nos. 3 and 6 is 0.130″; hole diameter for trade size Nos. 8, 10, and 13 is 0.193″; and hole diameter for trade size No. 20 is 0.262″. ***Splicing links*** repair broken chain and make endless chains. Pull chain through the hole to adjust length. ***Connectors*** join chain ends. ***Retainer sleeves*** are used to attach pens to the chain as well as for ends on pull chains and electrical outlet caps.

Nickel-plated and *black enamel-coated* finishes provide some corrosion resistance.

Type 304 stainless steel provides superior corrosion resistance.

To Order: Please specify chain length from those listed. The last length listed is the maximum continuous length.

Chain illustrations are actual size.

Warning! Never use for lifting.

About Wire Rope

The correct way to measure wire rope is with the faces of the caliper in contact with the crowns of two opposing strands.

Wires are the basic components of wire rope. They are wrapped around a center wire to form strands. The strands are then wrapped around a core to form the rope. The core of the rope can be fiber, a wire strand, or a wire rope (IWRC—Independent Wire Rope Core). Wrapping just the wire strands together (without a core) creates a hollow core wire rope.

We offer wire rope that meets the standards of Fed. Spec. RR-W-410. We also offer wire rope that meets both the strength requirements of the Fed. Spec. and the stringent MIL-DTL-83420 standards for high fatigue resistance over drums and pulleys or MIL-DTL-87161 for applications requiring high corrosion and abrasion resistance, but not fatigue resistance.

Breaking Strength— The strength at which new, unused wire rope will break under a stationary load. As a wire rope wears over time, the breaking strength is naturally reduced.

Breaking strength should never be considered the wire rope's work load limit. The work load limit depends on application and the method used to create a finished assembly, and is always significantly lower than the breaking strength. The most common applications and factors to apply for breaking strength can be found in our additional information 8912TAC (see below).

Construction— The number of strands, the number of wires per strand, and the core composition used to make the wire rope. For example, a 6×7 fiber core wire rope consists of six strands, each made with seven wires, and formed around a fiber core.

The following common wire rope constructions are known as class constructions: 6×7, 6×19, 6×37, 7×19, and 8×19. Within a given class construction, the number of wires is allowed to vary within established industry guidelines. For example, a 6×37 class fiber core rope may have 27 to 49 wires in one strand.

When wires and strands are shaped into the form they will take on as a wire rope, the wire rope is called preformed. Preformed wire rope is easier to handle, resists kinking, and won't unravel when cut. All of our wire rope is preformed (unless noted). Lubrication is provided on many ropes to increase service life.

Abrasion— Surface wear on the wires of a wire rope occurs as the wire rope moves over any surface. A wire rope constructed of strands with fewer wires will be more abrasion resistant than wire rope made with more wires. For example, 6×19 rope construction is more abrasion resistant than 6×37 construction.

Fatigue— Caused when a wire rope is repeatedly bent around drums and pulleys. A wire rope constructed of strands with more wires is more fatigue resistant than one made of strands with fewer wires. For example, 7×19 construction is more fatigue resistant than 7×7 construction.

Crushing— Any external force that causes a wire rope to become flattened or distorted and lead to breakage. This is especially true when a wire rope is used on drums and pulleys. In general, strand core and IWRC wire ropes are more crush resistant (less susceptible to flattening and distortion) than fiber and hollow core wire ropes.

Flexibility— A measure of the wire rope's ability to stand up to bending stresses such as repeated movement over drums and pulleys. Typically, small diameter fiber core and hollow core wire ropes are more flexible than large diameter strand and IWRC wire ropes. For wire ropes of the same diameter, flexibility increases as the number of wires per strand increases. For example, a 1/4″ diameter 7×19 construction wire rope is more flexible than a 1/4″ diameter 7×7 construction wire rope.

Materials and Coating

Plain steel is stronger than galvanized iron and steel, but is not corrosion resistant. ***Galvanized iron*** and ***steel*** offer corrosion resistance and are an economical alternative to stainless steel. ***Type 302*** and ***Type 304 stainless steel*** are more economical than the other stainless steels and provide good corrosion resistance. ***Type 316 stainless steel*** is the choice for extreme conditions. It offers the most corrosion resistance. ***Type 305 stainless steel*** is a special grade nonmagnetic stainless steel. It offers good corrosion resistance. ***Monel*** resists atmospheric corrosion and salt water. ***Phosphor bronze*** is nonsparking and nonmagnetic.

We offer wire rope coated with nylon, vinyl, or FEP (fluorinated ethylene-propylene) to protect against corrosion and reduce wear. We also offer polypropylene-impregnated and coated wire rope. The polypropylene coating fills internal spaces and coats the exterior of the wire rope to protect against fatigue, chemicals, and corrosion.

General Purpose Wire Rope

ⓘ For additional information about selecting wire rope, go to mcmaster.com and search for **8912TAC**.

General Purpose Plain Steel Wire Rope

6×19 Class Fiber Core

6×37 Class Fiber Core

6×19 Class IWRC

6×37 Class IWRC

All are preformed and lubricated. The 6×19 class construction is more abrasion resistant yet less flexible than the 6×37 class construction of the same diameter.

Fiber Core Rope— A fiber core makes this rope more flexible than IWRC constructions but also less crush resistant. Meets Fed. Spec. RR-W-410, unless noted.

IWRC Rope— A wire rope core makes this rope stronger and more crush resistant than fiber core rope. Meets Fed. Spec. RR-W-410, unless noted.

Heavy Duty IWRC Rope— Made of premium steel for high strength.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

★ Does not meet Fed. Spec. RR-W-410.

Warning! ***Breaking strength should never be considered the rope's working load.***

For information about wire rope, see page 1404.

For additional information about selecting wire rope, go to mcmaster.com and search for **8912TAC**.

Special Purpose Plain Steel Wire Rope

All are preformed and lubricated.

Improved-Flexibility Rope—8×19 class fiber core is the preferred construction for maximum flexibility, but with minimal crush resistance. Meets Fed. Spec. RR-W-410. ***7×19 class IWRC*** is somewhat less flexible, but stronger and more crush resistant than the 8×19 class fiber core.

Rotation-Resistant Rope—19×7 class IWRC has outer strands that lay in the opposite direction of its internal wire core, resulting in a rotation-resistant rope. Meets Fed. Spec. RR-W-410.

Long-Wear Rope—6×19 class IWRC is made of compacted strands for increased life and strength. The strands maximize the steel density in a given diameter and spread contact over a greater surface area for more abrasion resistance. ***19×7 strand core*** combines long wear and rotation resistance. The internal wire gives it good crush resistance, the compacted strands increase strength and abrasion resistance, and the construction makes it rotation resistant.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

Galvanized Iron and Steel Wire Rope

Key	Meets Specification
A	Fed. Spec. RR-W-410
B	ASTM A475
C	MIL-DTL-83420
D	MIL-DTL-87161
E	ASTM A1023

6×7 Class Fiber Core | *1×7 Strand* | *1×19 Strand* | *6×37 Class Fiber Core* | *6×37 Class IWRC* | *7×7 Strand Core* | *7×19 Strand Core*

A zinc coating on this galvanized rope provides corrosion protection. All are preformed and unlubricated (unless noted). Galvanized rope is generally not as strong as plain steel rope.

Galvanized Iron Rope— Also known as sash cord, this light duty rope has a 6×7 class fiber core.

Galvanized Steel Multipurpose Strand Rope— Constructed of a single strand, rope has low flexibility. 1×19 construction is more flexible than 1×7.

Galvanized Steel Multipurpose Rope—6×37 class fiber core is more flexible, but less crush resistant than IWRC rope. ***6×37 IWRC*** is stronger than fiber core. ***7×19 strand core*** is more flexible and fatigue resistant than 7×7 strand core.

Galvanized Steel Mil. Spec. Rope— Use in applications where rope is cycled back and forth over pulleys and drums.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

♦ Lubricated.

Warning! ***Breaking strength should never be considered the rope's working load.***

For information about wire rope, see page 1404.

For additional information about selecting wire rope, go to mcmaster.com and search for **8912TAC**.

Type 302 and Type 304 Stainless Steel Wire Rope

1×7 Strand

1×19 Strand

3×7 Hollow Core

6×19 Class IWRC

6×37 Class IWRC

6×42 Fiber Core

7×3 Strand Core

7×7 Strand Core

7×19 Strand Core

19×7 Strand Core

Key	Meets Specification
A	Fed. Spec. RR-W-410
C	MIL-DTL-83420
D	MIL-DTL-87161
E	MIL-DTL-83140

All are preformed and unlubricated (unless noted).

1×7 and ***1×19 Strand***—Ideal for linear force applications, these single-strand constructions have good abrasion resistance, but low flexibility. The 1×19 strand is slightly more flexible, but less abrasion resistant than the 1×7 strand.

3×7 Hollow Core—Perfect for light duty applications, this small diameter construction is extremely flexible.

6×19 and ***6×37 Class IWRC***—IWRC rope is stronger and more crush resistant than fiber core rope. The 6×37 construction is more flexible, but less abrasion resistant than the 6×19.

6×42 Fiber Core—This is the most flexible rope of all the six-strand constructions we offer. However, it is not as strong or abrasion resistant as the others.

7×3 Strand Core—Offered in small diameters, this rope provides more flexibility and higher fatigue resistance than single-strand constructions, but has a lower breaking strength.

7×7 Strand Core and ***7×19 Strand Core***—These constructions are stronger, but less flexible than 6×19 and 6×37 class constructions. The 7×19 class construction is both more flexible and more fatigue resistant than the 7×7 construction.

19×7 Strand Core—The most flexible of all our stainless steel constructions. The center strand of this rope lays in the opposite direction of its outer strands, resulting in a rotation-resistant rope.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

◆ Lubricated. ♣ Not preformed.

Warning! ***Breaking strength should never be considered the rope's working load.***

For information about wire rope, see page 1404.

For additional information about selecting wire rope, go to mcmaster.com and search for **8912TAC**.

Type 316 Stainless Steel Wire Rope

The most corrosion-resistant stainless steel rope we offer. All are preformed and unlubricated.

1×7 and ***1×19 Strand***—These single-strand constructions have good abrasion resistance, but low flexibility. They are ideal for linear force applications. The 1×19 strand is slightly more flexible, but less abrasion resistant than the 1×7 strand.

6×19 Class IWRC—The IWRC core makes this rope strong and crush resistant.

7×7 Strand Core and ***7×19 Strand Core***—These constructions are stronger, but less flexible than six-strand rope. The 7×19 construction is more flexible and more fatigue resistant than the 7×7 construction.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

Type 305 Stainless Steel Wire Rope

This specialty grade Type 305 stainless steel rope is nonmagnetic, has good corrosion resistance, and meets MIL-DTL-18375. All are preformed and lubricated. The 7×19 construction is more flexible and more fatigue resistant than the 7×7 construction.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

Nylon-Coated Wire Rope

1×7 Strand

3×7 Hollow Core

7×7 Strand Core

7×19 Strand Core

A chemical-resistant nylon coating not only protects your rope from abrasion, but also your drums and pulleys from wear. Our nylon-coated rope has better impact, abrasion, and fatigue resistance than our vinyl-coated rope, but is less flexible. Type 302/304 stainless steel is more corrosion resistant than galvanized steel. All are preformed (unless noted).

Warning: When attaching fittings to coated wire rope, the coating must be removed from the installation area.

Commercial Grade Rope— Rope with a bare dia. of 0.006″-0.038″ has a temperature range of –40° to +180° F; rope with a bare dia. of 3/64″-3/8″ has a temperature range of –65° to +200° F. Rope is lubricated (unless noted). ***1×7 strand*** is constructed of a single strand. It has low flexibility and is not suitable for use on drums and pulleys. ***3×7 hollow core*** has a small diameter and is more flexible than strand core rope. ***7×7 strand core*** is moderately flexible. It is commonly used in controls and mechanical applications. ***7×19 strand core*** is more flexible and fatigue resistant than the 7×7 construction.

Mil. Spec. Rope— Meets MIL-DTL-83420 standards for applications where the rope is cycled back and forth over pulleys and drums. Coating is natural opaque. Temperature range is –65° to +200° F. Rope is lubricated. ***7×7 strand core*** is moderately flexible. It is commonly used in controls and mechanical applications. ***7×19 strand core*** is more flexible and fatigue resistant than the 7×7 construction.

Low-Stretch Rope— Rope is stretched during construction to minimize elongation that other ropes experience under the same load. Coating is natural opaque. Temperature range is –40° to +180° F. Rope is unlubricated. ***7×7 strand core*** is moderately flexible. It is commonly used in controls and mechanical applications. ***7×19 strand core*** is more flexible and fatigue resistant than the 7×7 construction.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available. For Commercial Grade Rope, please also specify coating color: natural nylon, opaque black, opaque red, or translucent orange. *Note:* As coating thickness increases, the natural nylon may appear gray in color.

■ Available in natural nylon only. ♣ Not preformed. ▲ Unlubricated.

Warning! ***Breaking strength should never be considered the rope's working load.***

For information about wire rope, see page 1404.

For additional information about selecting wire rope, go to mcmaster.com and search for **8912TAC**.

Vinyl-Coated Wire Rope

More flexible with better UV resistance than nylon-coated rope. The vinyl coating not only protects the rope from abrasion, but also pulleys and drums from wear. Temperature range is –30° to +180° F. All are preformed and unlubricated. *Type 302/304 stainless steel* is more corrosion resistant than galvanized steel.

Warning: When attaching fittings to coated wire rope, the coating must be removed from the installation area.

7×7 Strand Core— Rope is moderately flexible and commonly used in controls and mechanical applications.
7×19 Strand Core— More flexible and fatigue resistant than the 7×7 construction.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available. Please also specify coating color: clear, opaque black, opaque orange, opaque yellow, or translucent red.

Fluorescent-Colored Vinyl-Coated Galvanized Steel Wire Rope

Fluorescent colors make this moderately flexible 7×7 strand core rope easy to see. The vinyl coating is flexible and resists sunlight and oxidation. Temperature range is –30° to +180° F. All are preformed and unlubricated.

Warning: When attaching fittings to coated wire rope, the coating must be removed from the installation area.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available. Please also specify fluorescent coating color: green, red, or yellow.

FEP-Coated Type 302/304 Stainless Steel Wire Rope

A tough, clear FEP (fluorinated ethylene-propylene) coating provides a low-friction, nonstick, and non-conductive surface on this corrosion-resistant Type 302/304 stainless steel rope. The coating is chemical and weather resistant. Temperature range is –350° to +400° F. All are preformed and unlubricated (unless noted).

Warning: When attaching fittings to coated rope, the coating must be removed from the installation area.

7×7 Strand Core— Rope is moderately flexible and commonly used in controls and mechanical applications.
7×19 Strand Core— More flexible and fatigue resistant than the 7×7 construction.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

♣ Not preformed.

Polypropylene-Impregnated and Coated Galvanized Wire Rope

With polypropylene inside as well as coating it, this strand core rope is chemical and corrosion resistant with high fatigue resistance. The coating seals in lubrication and has a temperature range of 0° to 200° F. All are preformed and lubricated. Color is black (unless noted).

Warning: When attaching fittings to coated rope, the coating must be removed from the installation area.

7×7 Strand Core— Rope is moderately flexible and commonly used in controls and mechanical applications.
7×19 Strand Core— More flexible and fatigue resistant than the 7×7 construction.

To Order: Please specify length from those listed; continuous lengths greater than the longest length listed are also available.

Work Load Limit—The maximum safe load that can be applied to a straight length of new rope. Work load limits will be reduced by jerking and pulling at an angle; applying a load at accelerated and fluctuating rates; plus twisting, knotting, weathering, age, and high temperatures.

Nylon Rope

Shock-Absorbing Nylon Rope

Commonly used in dock lines and towing applications, nylon rope stretches to provide shock absorption. It is strong for its size, but can lose some strength when wet. It resists rot and mildew and is soft to the touch.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Twisted

- Can be spliced
- Does not flatten
- Meets MIL-R-17343

Twisted construction is easy to grip. This rope is great for general-purpose applications where strength is desired and stretch is needed. Commonly used in tie-up lines. Color is white.

Abrasion-Resistant Solid Braided

- Does not flatten
- Does not rotate under load
- Knots easily

Rope has a smooth surface for the best abrasion resistance of our nylon ropes. Commonly used in dock lines. Color is white.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.
1/8″	26	100, 200, 500, 1,000	3838T711	$4.34
5/32″	37	100, 200, 500, 1,000	3838T721	5.60
3/16″	52	100, 200, 500, 1,000	3838T531	7.99
7/32″	71	100, 200, 500, 1,000	3838T741	8.25

Extra-Strength Double Braided

- Can be spliced
- Does not flatten
- Does not rotate under load
- Meets MIL-DTL-24050

The braided core adds strength while the braided cover provides abrasion resistance. Strongest of the all-nylon ropes, this rope stands up to the demands of mooring and tow lines. Color is white with blue and red marking strands.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.
1/4″	400	25, 50, 100, 200, 300, 600	3836T31	$35.45

Flexible Diamond Braided

Standard

High Capacity

- Does not flatten
- Does not rotate under load
- Knots easily

Thanks to a nonbraided core, these are the most flexible nylon ropes.

Standard rope is perfect for engine starter rope. It has a polyester core for stretch resistance. Color is white.

Acrylic-coated rope offers increased abrasion resistance.

High-capacity rope is also known as static kernmantle rope. The protective polyester cover and shock-absorbing nylon core make it ideal for positioning and rigging applications. Color is white with a blue marking strand.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.
Standard—*Uncoated*				
7/64″	23	100, 200, 500, 1,000, 3,000	3696T13	$5.52

1/2″	2,000	150, 200, 300, 600	5378K3	149.45
5/8″	2,400	150, 200, 300, 600	5378K4	191.66

Warning! ***Never exceed work load limits; never use to lift people or items over people.***

For information about fibrous rope material, see page 1410.

Clear Nylon Line

Also known as monofilament fishing line, this line is very thin yet strong and abrasion resistant. Ideal for tying and hanging light objects.

Line Dia.	Work Load Limit, lbs.	Spool Lg., ft.		
0.008″	4	990	9442T5	$7.79
0.012″	8	990	9442T1	7.96
0.017″	17	990	9442T2	9.22
0.022″	30	750	9442T3	11.33
0.028″	50	825	9442T4	11.65

Low-Stretch Polyester Rope

Stretch resistance makes polyester rope ideal for rigging with pulleys as well as tie down and anchor applications. This rope is similar in appearance and strength to nylon rope, but has lower stretch and does not lose strength when wet. It has a smooth finish and resists rot.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Twisted

Standard

Extra Grip

Lightweight Blend

- Can be spliced
- Does not flatten

Twisted construction is easy to grip. Ideal for applications such as stringing and winch lines where you don't want line stretch.

Standard rope is white.

Extra-grip rope feels and handles like natural manila rope, yet has the strength, stretch resistance, and flexibility of synthetic rope. Color is white with an orange marking strand.

Lightweight-blend rope is a polyester/copolymer blend and is approximately 20% lighter than standard polyester rope. Color is white (has a blue tint) with green and red marking strands.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.

Abrasion-Resistant Solid Braided

Standard

Reflective

- Does not flatten
- Does not rotate under load
- Knots easily

Rope has a smooth surface for the best abrasion resistance of our polyester ropes. Use in guy lines, sash cords, blocks, and pulleys.

Standard rope is white. Meets MIL-C-43256.

Reflective rope is black with a reflective marking strand that is visible day and night.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.
Standard				
1/8″	67	100, 200, 500, 1,000	3852T11	$6.10

Extra-Strength Double Braided

Loop End

- Can be spliced
- Does not flatten
- Does not rotate under load
- Knots easily

The braided core adds strength while the braided cover provides abrasion resistance. Strongest of the all-polyester ropes, this rope is the choice for flagpole pulleys, hoisting, and other demanding rigging applications. Color is white with a red marking strand.

Rope with loop ends is also known as winch line and allows quick attachment to tie downs and hooks. For additional winch lines, see page 1453.

To Order: Please specify rope length: 3, 6, 8, 12, 20, or 50 ft.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.

Rope Reinforced with Wire Core

Nylon Cover

Cotton Cover

- Does not flatten
- Does not rotate under load

A solid braided cover has a smooth surface for abrasion resistance. The galvanized wire core provides strength with very little stretch.

Nylon-cover rope is for pulleys and sheaves. Color is white. ***Cotton-cover*** rope is for sash cord. Color is off-white.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Rope Dia.	Wire Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.
Nylon Cover

Warning! ***Never exceed work load limits; never use to lift people or items over people.***

For information about fibrous rope material, see page 1410.

Lightweight Polypropylene Rope

Economical polypropylene rope is strong, floats in water, and resists rot, making it the choice for water rescue lines and water markers. It is also ideal for crowd-control barriers. **To Order:** Please specify length from those listed. The last length listed is the maximum continuous length.

Twisted

Solid-Color Standard

- Can be spliced
- Does not flatten

Twisted construction is easy to grip.

Solid-color standard rope.
To Order: Please specify color: black, white, or yellow, unless noted.

Striped Standard

Striped standard rope is the best choice for crowd-control barriers.
To Order: Please specify color: black/yellow, magenta/yellow, or red/white.

UV-Ray Resistant Standard

UV-ray resistant standard rope is also known as truck tie-down rope. It has a smooth finish. Color is black with a bright orange marking strand.

Extra Dense

Extra-dense rope has the benefits of polypropylene rope plus the strength of nylon rope. It is 16% lighter and stretches less than nylon rope. It resists UV rays. Color is seafoam green.

Extra Grip

Extra-grip rope has the texture and extra-firm grip of manila rope, yet is stronger and 35% lighter. This rope knots easily. Color is brown.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.

High-Performance Rope

High-performance fibers offer excellent strength with stretch resistance. A lightweight alternative to wire rope.
To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Extra-Strength Braided

Spectra

- Can be spliced
- Does not flatten
- Does not rotate under load

Made of braided 100% high-performance fibers for the ultimate in strength.

Spectra rope (high-performance polyethylene) floats and knots easily. Color is dark pink.

Vectran

Vectran rope (high-performance polyester) offers excellent slip resistance. Color is tan.

Technora

Technora rope (high-performance aramid) is the choice in high-temperature applications up to 480°F. It is flexible and knots easily. Color is dark tan.

Warning! ***Never exceed work load limits; never use to lift people or items over people.***

For information about fibrous rope material, see page 1410.

High-Performance Rope *(Continued from previous page)*

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Double-Braided with UV-Ray Resistant Cover

Spectra

Vectran

Technora

- Can be spliced
- Does not flatten
- Does not rotate under load

The braided high-performance fiber core offers strength while the braided polyester cover provides UV ray and abrasion resistance.

Spectra rope (high-performance polyethylene) floats and knots easily. Color is white with black and red marking strands.

Vectran rope (high-performance polyester) offers excellent slip resistance. Color is white with a green marking strand.

Technora rope (high-performance aramid) is ideal in high-temperature applications. It is flexible and knots easily. Color is white with red and yellow marking strands.

General-Purpose Manila Rope

- Can be spliced
- Does not flatten
- Knots easily
- Meets Fed. Spec. TR605

Twisted construction is easy to grip. Manila rope is stronger than sisal rope. Color is tan.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.
1/4″	54	100, 200, 300, 400, 600, 1,200	3825T31	$6.70

Easy-Knot Sisal Rope

- Can be spliced
- Does not flatten
- Knots easily

Twisted construction is easy to grip. This rope has coarser fibers and holds knots better than manila rope. Color is tan.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

Rope Dia.	Work Load Limit, lbs.	Available Lengths, ft.		Per 100 Ft.
3/16″	24	100, 200, 500, 2,000	3819T51	$3.82

Comfort-Grip Cotton Rope

Standard

High Strength

Extra Strength

- Does not flatten
- Does not rotate under load
- Knots easily

Solid braided construction has a smooth surface for a comfortable grip.

Standard rope has cotton/polyester cover and a polyester core for stretch resistance. Color is white.

The *9/64″ dia.* rope is also known as Venetian blind cord.

High-strength rope has a nylon/polyester core so it is stronger than standard rope. It's coated to resist rot, mildew, and wear. Also known as sash cord. Color is white. Complies with Fed. Spec. A-A-55622B.

Extra-strength rope has a nylon core making it the strongest cotton rope. It is coated for chemical and weather resistance. Also known as sash cord. Color is white with a red marking strand (unless noted). Complies with Fed. Spec. A-A-55622B.

To Order: Please specify length from those listed. The last length listed is the maximum continuous length.

★ Does not have a red marking strand.

Marlin Spikes

For Fibrous Rope

For Wire Rope

Easily splice fibrous rope as well as wire rope. Spikes are forged high-carbon steel. They are 1″ dia. at the thickest part (unless noted) and have a 5/16″ dia. lanyard hole. Lengths may vary slightly.

Lg.	*For Fibrous Rope*		*For Wire Rope*	
6″	3876T11 ♦	$15.57	—	—
8″	3876T12	16.79	3876T17	$37.74
10″	3876T13	18.68	3876T18	43.68
12″	3876T14	22.26	3876T19	44.72

♦ 5/8″ at thickest part.

Warning! *Never exceed work load limits; never use to lift people or items over people.*

Twine

Twine has a smaller diameter than rope. It is designed for light duty applications such as tying, binding, cinching, and bailing.

Twisted All-Purpose Nylon

Great for tying. Twine resists UV rays and rot. Also known as Seine twine. Color is white.

Handy pack comes on a card small enough to fit in your pocket or tool box.

Braided All-Purpose Nylon

Nylon twine has a smooth surface and is less likely to unravel compared to twisted twine. It resists abrasion, UV rays, and rot.

High-visibility fluorescent-color twine can easily be seen. **To Order:** Please specify color: orange, pink, or yellow.

Twine Dia.	Trade Size	Breaking Strength, lbs.	Length, ft.

Twisted Comfort-Grip Cotton

Cable Cord

Polished Cotton

Unpolished Cotton

Commonly used for tying. Color is white.

Cable-cord twine has a natural unpolished finish and is good for chalk lines.

Polished-cotton twine offers a smooth finish and moisture resistance. Ideal for mason lines.

Unpolished twine has a smooth finish.

Handy packs come on a card small enough to fit in your pocket or tool box.

▲ Hydraulic hand tool; handle is fiberglass. ★ Hydraulic bench tool; handle is aluminum.

Low-Profile Steel Wire Rope Clamps—Not for Lifting

Also known as tiller clamps, these have a smooth, thin body that won't snag wire rope. Screws are included. Use with 6×37 and 7×7 wire rope.

Zinc-plated steel clamps have good corrosion resistance in most environments.

Nickel-plated steel clamps have better corrosion resistance than zinc-plated steel clamps.

For Rope Dia.	Lg.×Wd.×Thick.			Zinc-Plated Steel	Each	Nickel-Plated Steel	Each
1/8"	1 9/16" ×	3/4" ×	3/8"	3471T11	$3.06	3471T22	$5.08
3/16"	1 5/8" ×	3/4" ×	7/16"	3471T12	3.39	3471T23	5.18

5/16"	1 7/8" ×	1" ×	1/2"	3471T14	4.93	3471T25	6.56
3/8"	2 5/16" ×	1 1/8" ×	5/8"	3471T15♦	11.67	3471T26♠	12.38

♦ Zinc-plated malleable iron. ♠ Nickel-plated malleable iron.

Low-Profile Stainless Steel Wire Rope Clamps—Not for Lifting

These slim stainless steel clamps won't snag and catch like other wire rope clamps can. Bolts and nuts are included.

One-bolt clamps are for use in light duty and suspension applications.

Two-bolt clamps are stronger than one-bolt clamps and provide superior, nonslip holding power.

Type 304 stainless steel clamps offer excellent corrosion resistance.

Type 316 stainless steel clamps provide maximum corrosion resistance.

For Rope Dia.	Lg.×Wd.×Thick.			Type 304 Stainless Steel	Each	Type 316 Stainless Steel	Each
One Bolt							
1/8" to 1/4"	1 3/16" ×	7/8" ×	1/2"	5513T1	$3.32	3416T31	$4.45
Two Bolt

Quick-Install Wire Rope Clamps—Not for Lifting

No tools required—feed wire rope through the clamp in one direction, form a loop, and feed the rope back through in the opposite direction until it is at least 3" past the clamp body. A key to release the grip so you can adjust the wire rope length is included. 34785T5 and T8 include screws for permanent installation. All are made of zinc alloy.

For Rope Dia.	Lg.×Wd.×Thick.			Each
1/16", 3/32"	2 1/8" ×	1" ×	1/4"	34785T3 $1.73
1/8"	2 7/16" ×	1 1/16" ×	5/16"	34785T4 2.18
3/16"	3 7/8" ×	1 3/8" ×	3/8"	34785T8 4.83
1/4"	4 1/8" ×	1 3/4" ×	9/16"	34785T5 11.28
3/8"	4 7/8" ×	2 1/4" ×	5/8"	34785T7 23.55

Grip-It Wire Rope Clamps—Not for Lifting

Assemble these three-piece clamps faster than wire rope clips, and get nearly the same smooth configuration of a swage fitting. They are cadmium-plated steel and consist of one coupler that threads onto two wedge halves. Meet MIL-STD 16843 and conform to Fed. Spec. FF-C-450. Use with 6×19 IWRC and 7×19 wire rope.

For Rope Dia.	Torque, ft.-lbs.		Each
1/8"	35	3489T27	$13.83
3/16"	80	3489T29	14.93
1/4"	145	3489T32	16.83
5/16"	225	3489T33	23.32
3/8"	325	3489T34	26.67
1/2"	575	3489T36	43.42

Combination Wire Rope Clamps and Thimbles—Not for Lifting

A wire rope clamp and thimble in one fitting. The clamp lets you create a loop and the thimble evenly distributes weight and eliminates snagging and tangling. Made of manganese bronze (unless noted). Use with six- or seven-strand wire rope.

For Rope Dia.	Torque, ft.-lbs.	(A)	(B)	(C)		Each
1/8"	8	9/16"	1 1/16"	2 1/2"	3467T14	$8.63

■ Made of steel.

Warning! Do not use with coated wire rope unless coating is removed.

Wire Rope Clips

For wire rope, see pages 1404-1409.

About Wire Rope Clip Installation

Single-Saddle Clips

Double-Saddle Clips

Wire rope clips must match your wire rope diameter and be installed correctly to obtain maximum holding power. To get the clips you need, look at the tables below and find your wire rope diameter, the number of clips required, the amount of wire turnback on which to apply the clips, and the torque needed to properly tighten the nuts. Wire rope clips are not rated for work load; the work load limit is determined by the wire rope.

To install ***single-saddle clips,*** position the saddle on the "live" or long end of rope and the U-bolt on the "dead" or short end.

For ***double-saddle clips,*** orientation doesn't matter—just position a saddle on each end. There is no U-bolt; the saddles fasten together to apply equal pressure without crimping or crushing the wire.

Crosby Forged Wire Rope Clips—*Not for Lifting*

Single-Saddle Clip

Double-Saddle Clip

Forged construction makes these heavy duty clips ideal for use on support lines, tie downs, and other critical applications.

Single-Saddle Clips—*Zinc-plated steel* clips have a red-painted steel U-bolt.

Zinc-plated steel clips offer good corrosion resistance in most environments. All except 1/8" and 3/16" rope dia. sizes meet Fed. Spec. FF-C-450. ***Type 316 stainless steel*** clips provide maximum corrosion resistance.

♦ Thimble is Type 304 stainless steel. ■ For 7/16″ and 1/2″ dia. rope.
● For 1/2″ and 9/16″ dia. rope. Torque for 9/16″ dia. rope is 95 ft.-lbs.

Wire Rope Thimbles—Not for Lifting

By evenly distributing weight around the loop, these thimbles (when used with wire rope clips or compression sleeves) protect your wire rope assemblies from damage and wear.

Zinc-plated steel thimbles have good corrosion resistance in most environments. ***Hot-dipped galvanized steel*** thimbles have a thicker zinc coating and better corrosion resistance than zinc-plated thimbles. ***Type 304 stainless steel*** thimbles offer excellent corrosion resistance. ***Type 316 stainless steel*** thimbles provide maximum corrosion resistance.

Light Duty

Also known as thin pattern thimbles. All except 3436T12 meet AN-100.

Warning! ***Do not use with coated wire rope unless coating is removed.***

For wire rope, see pages 1404-1409.

Compression Sleeves and Tools for Wire Rope

Compression Sleeves— Have a small profile and good connection strength for permanent installation. Must be compatible with the diameter and material of your uncoated rope.

Note: Sleeves are for use with the tools on this page or with Nicopress® tools.

Oval sleeves are ideal for creating loops or joining two wire ropes. All except aluminum meet MIL-STD 51844.

Note: All copper and stainless steel oval sleeves can be used in lifting applications. They must use the proper rope diameter and be properly installed. Test all assemblies for required strength before use.

Stop sleeves create a stop at the end of the wire rope. *Note:* Stop sleeves are not for lifting applications.

Compression Tools— Compress the sleeves onto wire rope. They must be compatible with the rope diameter and sleeve that they are being used with. All have metal handles and include a measuring gauge (unless noted) to ensure accurate sleeve compression.

Single-diameter tools compress one sleeve size.

Multidiameter tools compress more than one sleeve size. See the chart at right for oval and stop sleeve compatibility.

Hydraulic tools provide increased strength to compress larger sleeve sizes. All include a die for the sleeve material and size specified (unless noted); to use hydraulic tools with other sleeve materials and sizes, see additional dies sold separately on the following page.

MULTIDIAMETER TOOL COMPATIBILITY

Oval Sleeves for Rope Dia.	Sleeve Material	Multidiameter Tool Part No.
1/16″, 3/32″, 1/8″, and 5/32″	All except stainless steel	3582T1
1/8″, 5/32″, and 3/16″	All except stainless steel	3582T3
3/64″, 1/16″, and 3/32″	All	3582T5 ♦
1/8″, 3/16″, and 1/4″	All except stainless steel	3582T6
1/8″	All except stainless steel	3582T22
Stop Sleeves for Rope Dia.	**Sleeve Material**	**Multidiameter Tool Part No.**
1/16″	All except stainless steel	3582T1
3/64″ and 1/16″	All	3582T5
1/4″, 5/16″, and 3/8″	All except stainless steel	3582T6
3/32″, 1/8″, 5/32″, 3/16″, and 7/32″	All except stainless steel	3582T22

♦ Fits 3/64″ only in stainless steel.

Also Available: Replacement sleeve-compression measuring gauge. Please ask for 3377T13.

● Pliers style. Does not include a sleeve-compression measuring gauge.

Compression Sleeve Assortments for Wire Rope—*Not for Lifting*

Sleeves for the most popular rope diameters in convenient assortments. All come in a plastic case with a lid chart.

Aluminum Oval/Stop Kit

270 pieces for steel and galvanized wire rope.

For Rope Dia.	3/64″	1/16″	3/32″	1/8″	5/32″	3/16″	1/4″
Oval Sleeves (No.)	35	50	30	20	8	6	3
Stop Sleeves (No.)	—	50	30	20	8	8	2

30965T1 ..... Each $111.62

Copper Oval/Stop Kit

385 pieces for steel and galvanized wire rope.

For Rope Dia.	1/32″	3/64″	1/16″	3/32″	1/8″	5/32″	3/16″	1/4″
Oval Sleeves (No.)	40	35	50	30	20	8	6	3
Stop Sleeves (No.)	40	35	50	30	20	8	8	2

30965T2 ..... Each $127.12

Tin-Plated Copper Oval/Zinc-Plated Copper Stop Kit

305 pieces for stainless steel wire rope.

For Rope Dia.	3/64″	1/16″	3/32″	1/8″	5/32″	3/16″	1/4″
Oval Sleeves (No.)	35	50	30	20	8	6	3
Stop Sleeves (No.)	35	50	30	20	8	8	2

30965T3 ..... Each $130.24

Zinc-Plated Copper Oval/Stop Kit

385 pieces for steel and galvanized wire rope.

For Rope Dia.	1/32″	3/64″	1/16″	3/32″	1/8″	5/32″	3/16″	1/4″
Oval Sleeves (No.)	40	35	50	30	20	8	6	3
Stop Sleeves (No.)	40	35	50	30	20	8	8	2

30965T4 ..... Each $132.84

Compression Tools for Wire Rope

Multidiameter Hand Tools with Built-In Wire Rope Cutter

One tool, two great functions. These tools compress sleeves onto a variety of wire rope diameters plus cut the wire rope. All have hardened blades that surround and support the wire rope for a smooth, clean cut.

Tools for oval sleeves can be used with all sleeve materials except stainless steel.

Tools for stop sleeves can be used with all sleeve materials.

For Rope Dia.	(A)	Steel Handles	Steel Handles Each	Fiberglass Handles	Fiberglass Handles Each
For Oval Sleeves					
1/16″ to 5/32″	20″	3497T11	$276.61	3497T21	$336.61
1/8″, 5/32″, 3/16″	20 1/4″	3497T12	276.61	3497T22	336.61
For Stop Sleeves					
1/16″	20″	3497T11	276.61	3497T21	336.61

Hydraulic Hand and Bench Tools and Dies

Hydraulic tools offer increased strength to compress sleeves for wire rope up to 1/2″ diameter.

Hand Tool

Hand tools have a lightweight fiberglass handle and a replaceable cartridge that lasts for 10,000 to 12,000 compressions.

To Order: For hand tools with die and individual dies, please specify wire rope diameter, oval or stop sleeves, and the sleeve material being used.

Bench tools are for use with stainless steel oval sleeves.

To Order: For bench tools with die and individual dies, please specify wire rope diameter.

	Hand Tools	Hand Tools Each	Bench Tools	Bench Tools Each
Tool with Case (Die not incl.)	3433T11	$1,598.02	3433T12	$3,141.20
Tool and Die with Case	3433T17	1,696.02	—	—
Tool and Die	—	—	3433T18	3,240.47
Die	3433T69	176.87	3433T81	256.14
Repl. Cartridge for Tools	3433T13	151.76	—	—

Warning! ***Do not use with coated wire rope unless coating is removed.***

Corrosion-Resistant Socket-End Swage Fittings—*Not for Lifting*

Stud Fitting

Eye Fitting

Clevis Fitting

Ball with Shank Fitting

Roller Swage Press

Made of 300 series stainless steel, these rugged fittings require the use of a roller swage press (sold separately) to compress the socket onto wire rope.

Roller Swage Press and Dies

Roller Swage Press—Use on 1/16″ to 3/8″ diameter wire rope. Dies sold separately.

3429T4 ..... **Each** $5,026.40

Dies—For 1/16″ to 3/8″ dia. wire rope (unless noted). Set of two. **To Order:** Please specify wire rope diameter.

		Per Set
For Stud, Eye, and Clevis Fittings	3429T1	$626.97
For Ball with Shank Fittings	3429T2★	932.33

★ For 1/16″ to 1/4″ dia. wire rope.

Strong-Grip End Fittings—*For Lifting*

1 Pull the sleeve over the end of the wire rope.

2 Fray the end of the wire rope and insert plug.

3 The wire strands should cover the plug.

4 Screw the socket over the plug.

Stud Fitting

Eye Fitting

Top View

Clevis Fitting

No swage press required. These fittings install easily and have an inspection hole that allows you to check for proper installation—if you see wire strands, the plug was properly installed and has a secure grip. Use with 6×19 fiber core, 6×19 IWRC, 7×7, and 7×19 wire rope.

Note: Fittings used in lifting applications must be installed properly and should be tested before use.

Steel fittings are good where corrosion is not a factor. ***Zinc-plated steel*** fittings have good corrosion resistance in most environments. ***Type 316 stainless steel*** fittings provide maximum corrosion resistance.

Also Available: Replacement plugs. Please ask for 3475T1 and specify wire rope diameter.

Also Available: Assembly kits. Please ask for 3473T888 and specify wire rope diameter.

For wire rope, see pages 1404-1409.

Quick-Grip End Fittings—Not for Lifting

Install these fittings in a fraction of the time it takes to install other fittings. There's no need to fray the wire and only a wrench is required. All are made of corrosion-resistant Type 316 stainless steel. Use with all types of stainless steel wire rope, except fiber core and hollow core.

Eye Fittings

Adjustable-Length Quick-Grip Fitting—Not for Lifting

Just insert the wire rope, tighten the fitting, and rotate the fitting body to increase tension and adjust the length of the wire rope. This universal fitting can be used in straight runs, along stairs, and up to a 45° angle. Made of Type 316 stainless steel.

For Rope Dia.	(A) Min.	(A) Max.	(B)		Each
5/32″	4 3/4″	6″	7/32″	9161T1	$23.67

Wedge-Lock Clevis End Fittings—For Lifting

Also known as open wedge sockets, these fittings are easy to install and even easier to use. The wire rope clip secures the wire rope which is wedged against the clevis end fitting. The pin fits into the eye of the clevis end fitting to secure attachments for lifting and pulling applications. Clevis end fitting, wedge, pin, and wire rope clip are cast steel. Use with 6- to 8-strand wire rope.

For Rope Dia.	(A)	(B)	Clevis End Fittings	Each	Replacement Wedges	Each	Replacement Pins	Each

Nonconductive Nylon Lanyards—Not for Lifting

Loop/Eye

Not only do these lanyards protect your sensitive equipment from static, they are nonabrasive so they don't damage the surface of your material. All are made of lightweight molded black nylon. Maximum temperature is 160° F.

Fittings, Each End	Rope Dia.	Lg.	Loop Lg.	Eye Dia.	Pkg. Qty.		Per Pkg.

FITTINGS

Loop

Thimble Loop

Eye

Threaded Stud

Clevis

Ball with Shank

With larger diameter wire rope than our other wire rope lanyards, these handle heavy duty applications where a work load limit is required. They consist of 7×19 uncoated or clear-coated wire rope with a variety of fittings available at each end.

To Order: Sold in 1- to 10-ft. lengths. Please specify length.

Galvanized Steel Wire Rope Lanyards—*Loop* ends have copper sleeves. *Thimble loop* ends have copper sleeves and galvanized steel thimbles. *Eyes* are galvanized steel. *Clevis, stud,* and *ball with shank* have stainless steel fittings.

300 Series Stainless Steel Wire Rope Lanyards— Have Type 300 series stainless steel fittings and provide excellent corrosion resistance.

Coated Wire Rope— A nylon coating reduces abrasion. The coating adds 1/16″ to the rope diameter. Temp. range is –40° to +200° F.

Eye Fittings— For 1/8″ dia. rope have 1/4″ dia. eye; for 3/16″ dia. rope have a 1/2″ dia. eye.

Also Available: Additional lengths and fitting combinations. Please ask for 30645T999 for galvanized steel and 30745T999 for 300 series stainless steel and tell us what you need.

Wire Rope Lanyards—Not for Lifting

Eye/Eye Straight Lanyard

Eye/Eye Coiled Lanyard

Lanyards come in your choice of 7×7 uncoated or clear-coated wire rope with a variety of fittings available at each end. *Coated rope* reduces abrasion and adds 1/32″ to the rope diameter.

To Order: Please specify uncoated or coated rope.

Straight Lanyards—Coating is nylon. Temp. range is –40° to +200° F.

Coiled Lanyards—Coating is vinyl. Temp. range is –30° to +180° F.

Galvanized Steel Wire Rope Lanyards—Have aluminum sleeves and offer good corrosion resistance in most environments.

Eye fittings are zinc-plated copper; *ball with shank fittings* are Type 303 stainless steel.

Type 304 Stainless Steel Wire Rope Lanyards—Provide excellent corrosion resistance. Sleeves and fittings are 300 series stainless steel.

Lanyard Kits—*Not for Lifting*

Everything you need to create your own lanyards. Temperature range is 0° to 120° F.

Light Duty Kits—Contain 1/32″ dia. 1×7 Type 302 stainless steel wire rope with black or clear nylon coating, 25 brass sleeves, and a combination compression tool/wire cutter.

Wire rope with black coating has black-oxide brass sleeves. *Wire rope with clear coating* has nickel-plated brass sleeves.

Heavy Duty Kit

Heavy Duty Kits—Contain 1/16″ dia. 7×7 wire rope with a clear nylon coating, 50 aluminum sleeves, 20 zinc-plated copper eye fittings, 10 Type 304 stainless steel tabs, and a compression tool.

Oblong Links with Coupling Links—*For Lifting*

Ideal for three- and four-leg slings, the large coupling links attached to the oblong link reduce rubbing and twisting. All links are welded alloy steel. A connector (not included, see page 1424) must be used to connect the coupling links to the chain or rope.

Note: Work load limits are based on a 60° lifting angle. Do not use a greater lifting angle than 60°. Work load limit is for links only. The type of chain or rope used will determine the ultimate work load limit.

Oblong and Pear-Shaped Links—*For Lifting*

Use as a master link in a sling assembly or anywhere large links are required.

Note: Work load limit is for links only. The type of chain or rope used will determine the ultimate work load limit.

Weldless Links—Offer greater strength than welded links. Links are forged.

Pear-Shaped Links—Provide additional room for multiple connectors.

Ultramax (Grade 120) are made of alloy steel.

Supermax (Grade 100) are made of alloy steel.

High-Strength (Grade 80) links are the most commonly used links for lifting applications. Made of alloy steel.

Corrosion-resistant (Grade 50) links are Type 316 (Ti) stainless steel, except *30765T8* and *T85* are Type 316L. They resist corrosion, rust, and salt water.

Chain Sling Identification Tag

Front ***Back***

A slot in the hole makes this tag easy to attach to a sling link. Use a permanent marker or 1/4″ to 3/8″ high stamps to apply markings. Tag is made of steel. Attaching a tag to a chain sling is required for meeting OSHA specification 1910.184.

Figure-Eight Connectors—For Lifting

Assemble these connectors with a hammer and then use them to attach hooks, rings, master links, and other end fittings to chain or wire rope. All are forged.

Removable Connectors—Also known as hammer locks.

Nonremovable Connectors—Provide security and must be cut or burned off to be removed.

Ultramax (Grade 120) are made of alloy steel and can be reused.

Supermax (Grade 100) are made of alloy steel and can be reused. *Black super-corrosion-resistant* connectors have a dual-coating for enhanced corrosion resistance.

High-Strength (Grade 80) connectors are the most commonly used connectors for lifting applications. They are made of alloy steel and can be reused.

Corrosion-resistant (Grade 50) links are made of Type 316 (Ti) stainless steel and resist corrosion, diluted acids, pitting, rust, and salt water. Not for reuse.

Pear-Shaped Links with Removable Connector—For Lifting

By having a built-in connector, these master links eliminate the need for a separate sling link and connector. The design allows easy access to the inside of the master link, and the built-in connector makes size selection easy. Made of forged high-strength (Grade 80) alloy steel with a yellow powder-coated finish.

For Chain Trade Size	Dia.	(A)	(B)	(C)	Work Load Limit, lbs.		Each
9/32″	9/16″	5″	19/32″	2″	3,500	**3697T81**	$56.29

All-In-One Length-Adjusting Chain Fittings—For Lifting

Create your own adjustable-length chain sling. The master link is pear shaped with a clevis pin and has a grab hook for adjusting the length of the chain. All are made of forged alloy steel with a silver-painted finish. Use with supermax (Grade 100) and high-strength (Grade 80) chain.

For Chain Trade Size	(A)	(B)	(C)	(D)	(E)	Work Load Limit, lbs.		Each

Chain Sling Saddle Links—For Lifting

Create slings quickly and easily. Slots in the saddle firmly hold chain for control of unbalanced loads. Links are welded supermax (Grade 100) alloy steel.

Note: Work load limits are based on a 60° lifting angle. Do not use a greater lifting angle than 60°. Work load limit is for links only. The type of chain or rope used will determine the ultimate work load limit.

One slot creates a two-leg sling; ***two slots*** create a four-leg sling.

For Chain Trade Size	Dia.	(B)	Work Load Limit, lbs.		Each
With One Slot					
9/32″	37/64″	2 1/2″	7,400	**3660T31**	$158.60
3/8″	13/16″	3″	15,200	**3660T32**	186.91
With Two Slots					
9/32″	13/16″	3″	11,200	**3660T41**	241.13
3/8″	1 1/8″	4″	22,800	**3660T42**	349.20

Rings—For Lifting

Rings rotate for even wear. All are welded. ***High-strength (Grade 80)*** rings are made of alloy steel. ***Corrosion-resistant (Grade 50)*** rings are made of Type 316L stainless steel.

Dia.	(A)	Work Load Limit, lbs.		Each
High Strength (Grade 80)				
1/2″	2 1/2″	4,300	**3569T21**	$39.68

3/8″	1 1/8″	1 7/8″	3,000	**30375T23**	32.53

Warning! ***Never exceed work load limits.***

Oblong and Pear-Shaped Links—Not for Lifting

All are forged steel.

Pear-shaped links provide additional room for multiple connectors.

Hot-dipped galvanized steel links offer good corrosion resistance.

Oblong *Pear Shaped*

Dia.	(A)	(B)	(C)	Work Load Limit, lbs.	Red Painted	Each	Hot-Dipped Galvanized	Each

Hammer-Close Chain Connectors—Not for Lifting

An easy-to-use two-piece design with locking prongs lets you connect end fittings to chain. To close, strike the prongs with a ball peen hammer. Designed for connecting links and chain with the same diameter.

Steel connectors are forged and good for applications where corrosion is not a factor. Meet Fed Spec. RR-C-271D, Type II.

Hot-dipped galvanized steel connectors are forged and provide good corrosion resistance. Meet Fed. Spec. RR-C-271D, Type II and ASTM A153.

Type 316 stainless steel connectors are cast and provide maximum corrosion resistance.

Bend-Close Chain Connectors—Not for Lifting

An economical way to join chain links and attach fittings.

Light duty connectors are also known as lap links and repair links.

Medium duty connectors are also known as cold shuts. To close, drive the end through the eye and flatten the extended end to prevent opening. Connectors can also be welded closed.

Steel connectors are good for applications where corrosion is not a factor. ***Zinc-plated steel*** connectors offer good corrosion resistance in most environments.

Warning: Connectors must be completely closed to perform at rated capacity. Never reuse connectors after they've been closed.

Warning! **Never exceed work load limits.**

Double-Clevis Connectors—For Lifting

Create strong lifting, towing, and tie-down systems with these connectors. Made of forged high-strength (Grade 80) alloy steel. Body has a red powder-coated finish.

Connectors with flush pins prevent snagging. ***Connectors with safety pins*** are ideal for applications that require frequent pin removal. The safety pin consists of a round pin secured with a nut and a cotter pin (also known as a bolt, nut, and cotter pin).

For Chain Trade Size	(A)	(B)	(C)	(D)	(E)	(F)	Work Load Limit, lbs.	With Flush Pin	Each	With Safety Pin	Each

High-Strength Anchor Shackles—For Lifting

With Screw Pin

Choose these when you need a strong shackle with a wide body for easier connections. Also known as bow shackles. All are forged. *Note:* Work load limits are based on loads applied in line with a straight length of chain or wire rope.

Shackles with screw pin are ideal for lifting applications where shackles are frequently removed. The pin screws into position without the use of tools. Do not use if there will be movement or vibration of the pin.

Shackles with safety pin are the most secure choice for lifting. The safety pin consists of a round pin secured with a nut and a cotter pin (also known as a bolt, nut, and cotter pin).

Shackles with captive self-locking screw pin have indentations that lock the pin in place as it is tightened. They also have a slight lip on the end of the screw pin that prevents separation from the shackle and eliminates lost pins.

Black-oxide steel shackles have a corrosion-resistant finish and blend into dark backgrounds. Meet Fed. Spec. RR-C-271D. ***Hot-dipped galvanized alloy steel*** shackles are stronger than hot-dipped galvanized carbon steel shackles and offer good corrosion resistance. Meet Fed. Spec. RR-C-271D and ASTM A153. ***Hot-dipped galvanized carbon steel*** shackles have alloy steel pins and offer good corrosion resistance. Meet Fed. Spec. RR-C-271D and ASTM A153. ***Type 316*** and ***Type 316L stainless steel*** shackles provide maximum corrosion resistance.

High-Strength D-Shackles—For Lifting

Also known as chain shackles, the narrow body on these restricts movement of rigging lines. All are forged.

Note: Work load limits are based on loads applied in line with a straight length of chain or wire rope.

Shackles with screw pin are ideal for lifting applications where shackles are frequently removed. The pin screws into position without the use of tools. Do not use if there will be movement or vibration of the pin.

Shackles with safety pin are the most secure choice for lifting. The safety pin consists of a round pin secured with a nut and a cotter pin (also known as a bolt, nut, and cotter pin).

Shackles with self-locking screw pin have indentations that lock the pin in place as it is tightened. *Shackles with elongated body* increase the reach of the connection.

Shackles with captive self-locking screw pin are the same as the shackles with self-locking screw pin above, but they also have a slight lip on the end of the screw pin that prevents separation from the shackle. *Shackles with elongated body* increase the reach of the connection.

Hot-dipped galvanized steel shackles have alloy steel pins and offer good corrosion resistance. Meet Fed. Spec. RR-C-271D and ASTM A153. ***Type 316*** and ***Type 316L stainless steel*** shackles provide maximum corrosion resistance.

Also Available: Black-oxide steel shackles. Please ask for 8496T888 and specify screw pin or safety pin and diameter.

Web Sling Shackles—For Lifting

An extra-wide body on these shackles keeps web slings from sliding and bunching. All are forged alloy steel.

Shackles with screw pin are ideal for lifting applications where shackles are frequently removed. The pin screws into position without the use of tools. Do not use if there will be movement or vibration of the pin.

Shackles with safety pin are the most secure choice for lifting. The safety pin consists of a round pin secured with a nut and a cotter pin (also known as a bolt, nut, and cotter pin).

Optional spools (sold separately) fit on the pin to center attachments and keep them from sliding across the pin.

Heavy Duty Shackles—For Lifting

Among the strongest shackles we offer, these are easy to assemble and disassemble with a hammer. The flush pin prevents snags and accidental disengagement. Made of forged alloy steel. The body has a red powder-coated finish.

Warning! ***Never exceed work load limits.***

High-Strength Anchor Shackles—Not for Lifting

Look no further if you want a corrosion resistant shackle with a wide body for easier connections. A cotter pin secures the end of the round pin. All are forged. Also known as bow shackles.

Note: Work load limits are based on loads applied in line with a straight length of chain or wire rope.

Hot-dipped galvanized alloy steel shackles are stronger than hot-dipped galvanized carbon steel shackles and offer good corrosion resistance. Meet Fed. Spec. RR-C-271D and ASTM A153. ***Hot-dipped galvanized carbon steel*** shackles have alloy steel pins and offer good corrosion resistance. Meet Fed. Spec. RR-C-271D and ASTM A153. ***Type 316 stainless steel*** shackles provide maximum corrosion resistance.

Also Available: Black-oxide steel shackles. Ask for 8494T777 and specify diameter.

Corrosion-Resistant D-Shackles—Not for Lifting

Elongated Body

Twisted Body

Type 316 stainless steel construction makes these shackles ideal for corrosive environments. All have a screw pin that screws into position without the use of tools. Ideal for applications where the shackle is frequently removed. Do not use if there will be movement or vibration of the pin.

Note: Work load limits are based on loads applied in line with a straight length of chain or wire rope.

Shackles with elongated body increase the reach of your connection. ***Shackles with twisted body*** have the body turned 90°.

Bearing Swivels—For Lifting

1

2

3

Designed to swivel under load in low-torque and high-rotation applications, these swivels keep the load stable by releasing tension and removing twisting in the rope or chain. All are made of alloy steel and have contoured ends that prevent snagging. The bearings are permanently lubricated and sealed to keep out dirt and grime.

Note: For use in straight-line lifting applications.

(2&3) Clevis ends have removable pins. A thimble is required for use with wire rope. Please see page 1417 for thimbles.

7

8

Fully enclosed ball bearings in these swivels give you smooth rotation under load.

(4-6) Standard swivels are made of Type 316 stainless steel.

(7&8) Miniature swivels have tapered holes so the snap and split ring can swing freely and pull from the center for perfect alignment. The body is nickel-plated brass; ball bearings are Type 302 stainless steel.

Swivels—Not for Lifting

Use these swivels on rope and chain to relieve stress caused by twisting and knotting while being pulled taut. Ideal for connecting two different ropes or chains.

Note: Work load limits are based on use in a straight line and should not be used at an angle. Swivels are not designed for spinning or rotating under load.

Hot-dipped galvanized steel swivels offer good corrosion resistance.

Type 316 stainless steel swivels provide maximum corrosion resistance.

(9) Eye and eye swivels have an extra-large eye opening for oversized chain and rope.

(10&11) Eye and clevis swivels are used where frequent attaching and detaching is required.

Style 10 have a round pin secured by a cotter pin.

Style 11 have a screw pin for quick and easy attachment without tools.

(12) Clevis and clevis swivels connect combinations of chain and fittings. The screw pins allow quick and easy attachment without tools.

About Turnbuckles and End Fittings

Turnbuckles are mechanical coupling devices that adjust length and tension. They consist of two threaded end fittings and a threaded body. One end fitting has right-hand threads (fitting tightens clockwise), and the other end has left-hand threads (fitting tightens counterclockwise). The turnbuckle body has matching right- and left-hand internal threads. Turning the turnbuckle body adjusts the end fittings an equal amount on each end.

High-Strength Corrosion-Resistant Turnbuckles

Suited to your toughest applications, these turnbuckles offer strong, seamless, forged construction (unless noted) and are ideal for outdoor and wet environments.

Jaw end fittings include one removable pin and one cotter pin. ***Stub end fittings*** are partially threaded. ***Stud end fittings*** are fully threaded.

Galvanized steel turnbuckles have a hot-dipped finish and offer good corrosion resistance. Meet ASTM F1145-05 Type 1, Grade 1. ***Type 316 stainless steel*** turnbuckles provide maximum corrosion resistance. Meet ASTM F1145-92 Type 1.

Also Available: Jam nuts. Please ask for 30045T555 and specify thread size and right- or left-hand thread.

Warning! *Never exceed work load limits.*

High-Strength Weld-Mount Turnbuckles

Weldability—that's what these turnbuckles are all about. Bodies are made of forged plain steel and meet F1145-05, Type 1, Grade 1. Stub and stud ends are made of 1018 steel. ***Stub ends*** are partially threaded. ***Stud ends*** are fully threaded. **To Order:** For replacement end fittings, please specify right- or left-hand thread.

Also Available: Jam nuts. Please ask for 2995T222 and specify thread size and right- or left-hand thread.

Corrosion-Resistant Turnbuckles

Made of cast Type 316 stainless steel (unless noted), these turnbuckles are the economical choice when you need corrosion resistance.

Jaw end fittings include one removable pin and one cotter ring.

Also Available: For replacement bodies, ask for 30315T666 and specify thread size. For replacement end fittings and jam nuts, ask for 30315T333 and specify type of end fitting (eye, jaw, hook, or stub) or jam nut, thread size, and right- or left-hand thread.

For information about turnbuckles and end fittings, see page 1430.

Closed-Body Corrosion-Resistant Turnbuckles

The right choice for outdoor and harsh environments. These turnbuckles pair up a closed body to protect the threads from debris and 300 series stainless steel construction for corrosion resistance. They also have a slim body for use in tight spaces. Jam nuts are included.

Jaw end fittings pivot for easier connections and include one removable pin and one cotter ring. Fittings with ½"-20 and ⅝"-18 thread sizes have corrosion-resistant bronze inserts on the pivots.

Also Available: Replacement bodies and end fittings.

For replacement bodies, please ask for 3082T666 and specify thread size.

For replacement end fittings, please ask for 3082T888 and specify type of end fitting (eye, jaw, or hook), thread size, and right- or left-hand thread.

Light Duty Turnbuckles

If you have small-wire applications that require low tension, these are the turnbuckles you need.

Closed-body turnbuckles keep debris out of the threads.

Zinc-alloy steel bodies offer good corrosion resistance in most environments. ***Aluminum bodies*** are corrosion resistant, strong, and lightweight.

Zinc-plated steel end fittings offer good corrosion resistance in most environments. ***Type 304 stainless steel end fittings*** provide excellent corrosion resistance.

To Order: Please specify end fittings: eye and eye, hook and eye, or hook and hook.

Grab Hooks—*For Lifting*

With Clevis

For use as a shortening hook when taking up excess chain, these hooks securely hold a single link of chain in their narrow opening. They have contoured sides with grooves that allow weight to be more evenly distributed across the links of the chain. All are made of forged alloy steel. Maximum temperature is 300° F.

Ultramax (Grade 120) hooks are the strongest grab hooks we offer. When used with chain of the same grade they are approximately 20% stronger than Supermax (Grade 100) hooks and about 35% stronger than high-strength (Grade 80) hooks.

Supermax (Grade 100) hooks are approximately 20% stronger than high-strength (Grade 80) hooks when used with chain of the same grade.

High-strength (Grade 80) hooks are the industry standard for lifting.

Also Available: Black super-corrosion-resistant finish Supermax (Grade 100) hooks with clevis. Hooks are zinc plated and have an epoxy coating for enhanced corrosion resistance. Please ask for 33985T888 and specify chain trade size.

Grab Hooks with Securing Pin—*For Lifting*

Supermax (Grade 100)

Keep it together—these hooks have a spring-loaded pin that prevents your chain and hook from separating when chain slackens. All are made of forged alloy steel.

Supermax (Grade 100) hooks are approximately 20% stronger than high-strength (Grade 80) hooks when used with chain of the same grade. Maximum temperature is 400° F.

High-strength (Grade 80) hooks are the industry standard for lifting. Maximum temperature is 300° F.

Also Available: Securing pin repair kit for high-strength (Grade 80) hooks. Please ask for 3702T88 and specify chain trade size.

Grab Hooks—*Not for Lifting*

With Clevis

Securely hold a single link of chain in the narrow opening of these forged hooks. Ideal for use as a shortening hook when taking up excess chain as well as in binding and tie-down applications. Maximum temperature is 400° F.

Steel hooks are good for applications where corrosion is not a factor.

Type 316 stainless steel hooks provide maximum corrosion resistance.

Sling Hooks with Latch—For Lifting

These forged hooks have a latch that springs back to the closed position to keep your chain and hook from separating when the chain slackens. The hook opening accommodates large anchor points and allows chain to move freely through the closed hook.

Note: When used with wire rope, ensure that the eye diameter can accommodate the wire rope thimble.

Ultramax (Grade 120) are the strongest sling hooks with latch we offer. They are approximately 20% stronger than Supermax (Grade 100) hooks and about 35% stronger than high-strength (Grade 80) hooks. Made of alloy steel. Maximum temperature is 300° F.

Supermax (Grade 100) hooks are approximately 25% stronger than high-strength (Grade 80) hooks. All are made of alloy steel. Maximum temperature is 300° F.

Black super-corrosion-resistant hooks are zinc plated and have an epoxy coating for enhanced corrosion resistance.

High-strength (Grade 80) hooks are the industry standard for lifting applications. All are made of alloy steel. Maximum temperature is 400° F.

Hooks with half link have a built-in half-link connector.

Corrosion-resistant (Grade 50) hooks are Type 316L stainless steel for maximum corrosion resistance. Maximum temperature is 750° F.

Medium-strength hooks swivel to make positioning and connecting to the load easier. They are made of nongraded alloy steel. Maximum temperature is 199° F.

Replacement latches include latch, spring, and installation hardware.

Sling Hooks with Locking Latch—*For Lifting*

With Clevis

With Eye

You load them up and their latch locks them down. The latch on these hooks automatically closes when the load is applied and can only be opened by pressing the release button. All hooks are forged alloy steel. Maximum temperature is 400° F.

Swivel hooks make positioning and connecting to the load easier. ***Ball-bearing swivel hooks*** also swivel under load.

Replacement latch springs include a spring and installation hardware.

Supermax (Grade 100) hooks are approximately 20% stronger than high-strength (Grade 80) hooks when used with chain of the same grade. ***High-strength (Grade 80)*** hooks are the industry standard for lifting.

Slip Hooks with Latch—*Not for Lifting*

With Clevis

With Eye and Swivel Hook

A latch on these hooks provides added security. Maximum temperature is 400° F.

Hooks with clevis are forged. ***Hooks with eye*** are cast and swivel to make positioning and connecting to the load easier. ***Hot-dipped galvanized steel*** hooks offer good corrosion resistance. ***Type 316 stainless steel*** hooks provide maximum corrosion resistance.

Replacement latches include latch, spring, and installation hardware.

Hooks with Oversized Eye—For Lifting

If you've got large wire rope thimbles and heavy duty chain connectors, these hooks have a large eye to accommodate them. Also known as rigging hooks and hoist hooks. All are forged.

Swivel hooks make positioning and connecting to the load easier.

Steel Hooks without Latch—Maximum temperature is 199° F. *Alloy steel* hooks have a gold-painted finish. *Carbon steel* hooks have a red-painted finish. *Optional latches* lock into place by inserting the included cotter pin into the drilled pinhole in the tip of the hook. Latches are steel.

Type 316 Stainless Steel Hooks with Latch—Offer maximum corrosion resistance. Maximum temperature is 600° F. *Replacement latches* include latch, spring, and installation hardware.

Hook Latches—For Lifting

Add functionality by installing a latch on your hook, or extend the life of your hook by replacing a damaged latch. All latches come with a nut and zinc-plated latch bolt (hooks not included).

Spring Latches

Ideal for most hooks with a drilled pinhole. To select the correct size, check the work load limit (measured in tons) of your hook. Made of Type 302 stainless steel.

For Work Load Limit, tons: For Carbon Steel Hooks	For Alloy Steel Hooks	(A)	(B)	(C)	Bolt Hole Dia.	Each

Clamp-On Spring Latches

Choose the latch that matches the neck diameter and hook opening of your hook, and clamp it in place.

Zinc-plated steel latches offer good corrosion resistance in most environments. ***Type 304 stainless steel*** latches provide excellent corrosion resistance.

Hooks with Swing-Lock Latch—*For Lifting*

With Clevis and Swivel Hook

With Eye and Swivel Hook

Easily shut with one hand, the spring-loaded latch on these hooks swings 150° and snaps back in place to secure your load. Once closed, the latch can only be opened by releasing the locking mechanism. Hooks are made of forged nongraded alloy steel with a zinc-plated finish. Max. temp. is 199° F.

Hooks with clevis attach by inserting the included alloy steel pin through a chain link (chain not included). ***Hooks with eye*** accommodate shackles and other open-end connectors. ***Hooks with threaded shank*** are ideal for use with pulley blocks. Nut is included.

Swivel hooks make positioning and connecting to the load easier. ***Ball-bearing swivel hooks*** also swivel under load.

Replacement latches include latch, spring, and installation hardware.

Wide-Mouth Hooks—*For Lifting*

With Clevis

With Eye

Also known as foundry hooks, they are ideal for lifting molds and castings. The tapered tip allows them to fit into narrow openings. All are forged alloy steel.

Supermax (Grade 100) hooks are approximately 20% stronger than high-strength (Grade 80) hooks when used with chain of the same grade. Maximum temperature is 400° F.

High-strength (Grade 80) hooks are the industry standard for lifting applications. Maximum temperature is 500° F.

Tapered-Tip Hooks—*For Lifting*

Welded

Forged

When you need to insert a hook into holes, eyebolts, rings, and chain links, the tapered tip on these hooks makes it easy. Ideal for foundry and general sorting operations. Also known as J-hooks. Maximum temperature is 400° F.

Alloy steel hooks are good for applications where corrosion is not a factor. ***Type 316L stainless steel*** hooks provide maximum corrosion resistance.

Work Load Limit, lbs.	Dia.	(A)	(B)	(D)		Each
Alloy Steel—Welded

Shank Hooks—For Lifting

You can thread the plain shank on these hooks to meet your requirements. A drilled pinhole hole lets you add a latch. All hooks are forged alloy steel with a black-painted finish. Maximum temperature is 199° F.

Optional latches include a latch, spring, latch bolt, and self-locking nut.

Work Load Limit, lbs.	(A)	(B)	(C)	(D)	Hooks	Each	Optional Latches	Each

Pull-Pin Hooks—Not for Lifting

1

2

A heavy duty, spring-loaded pin on these snaps locks the full-opening arm in place. To release the arm, simply pull out the pin. Where access is limited, attach a rope or lanyard to the ring on the pin for remote release. Snaps are corrosion resistant and swivel to make positioning and connecting to the load easier.

Quick-Release Hooks—For Lifting

These hooks have a quick-load release that's ideal for laboratory drop-test simulation. To use, push the bottom link into the hook body to lock it then pull the load release ring to open. For remote release of loads, attach a rope or lanyard to the load release ring. Hooks are forged. Maximum temperature is 480° F.

Alloy steel hooks are good where corrosion is not a factor. ***Type 316 stainless steel*** hook provides maximum corrosion resistance.

Warning: Any release under load must be carefully studied as to its applicability and safety.

Work Load Limit, lbs.	Max. Release Load, lbs.	Dia.	(A)	(B)	(D)		Each
Alloy Steel							
4,500	3,500	1/2"	1 1/8"	4 1/2"	15/16"	3398T1	$214.29
18,000	10,000	15/16"	2 3/16"	7"	1 1/2"	3398T31	544.12
Type 316 Stainless Steel							
2,000	2,000	1/2"	1 3/8"	4 1/2"	15/16"	3398T6	492.42

Fall-Arrest Hooks—Not for Lifting

3

4

5

6

A locking mechanism secures the latches on these snaps. All snaps are made of alloy steel. They meet ANSI Z359.2-1992, which allows for use in fall arrest systems.

(3&4) Quick-disconnect lock snaps release the latch when you squeeze the mechanism on both sides of the snap body.

Double-end quick-disconnect snap has a snap on each end.

(5) Safety-lock snap has a positive-locking mechanism that disengages when you squeeze the front trigger and slide the latch grip down.

(6) Locking wide-throat snaps not only lock the latch but are ideal for large diameter pipe and rope.

Warning: Proof load is not the same as the work load. The work load is less than the proof load and varies depending on the type of application.

	Proof Load, lbs.	(A)	(B)	(C)		Each
Double-End Quick-Disconnect Lock						
3	5,000♣	5/8"	8 1/2"	1"	3927T39	$41.30
Quick-Disconnect Lock						
4	5,000	3/4"	5"	1"	3927T41	17.39
Safety Lock						
5	5,000	5/8"	5"	1"	3927T22	36.41
Locking Wide Throat						
6	5,000	1 15/16"	6 1/2"	1"	3927T43	33.70
6	5,000	2 1/2"	7 3/4"	1"	3927T44	42.83

♣ Proof load is 5,000 lbs. when pulled hook-end to hook-end. It decreases to 3,600 lbs. when pulled at an angle.

Warning! ***Never exceed work load limits.***

Threaded Connectors—Not for Lifting

1

2

3

4

5

Also known as quick links, these threaded connectors offer a fast and easy way to attach end fittings. They can also be reused. To close, simply screw the nut onto the threaded end.

Oval connectors are ideal for general-purpose applications.

Square connectors have a flat top and bottom for use with webbing and strapping.

Pear-shaped connectors are for use with thimbles, bulky fittings, and combination chain and rope connections.

Triangle connectors are great for three-sided connections. The flat bottom can also be used with webbing and strapping.

Zinc-plated steel connectors offer good corrosion resistance in most environments.

Type 316 stainless steel connectors provide maximum corrosion resistance.

Also Available: Brass oval connectors. For connectors with a standard opening, please ask for 8947T888 and specify diameter.

For connectors with a large opening, please ask for 3711T888 and specify diameter.

Locking Carabiner-Style Connectors—*Not for Lifting*

A locking latch ensures a safe and secure connection. Plus, there are no sharp edges to snag on rope and webbing.

(1&2) Twist-lock snaps open by lifting and twisting the latch, which snaps closed when released.
(3&4) Screw-lock snaps have a knurled sleeve that screws down over the latch.
(5) Slide-lock snaps lock slides down over the latch. And since they open outward, these snaps offer a larger opening than snaps that open inward.

Zinc-plated steel snaps offer good corrosion resistance in most environments. ***Aluminum*** snaps are lightweight yet strong and offer excellent corrosion resistance. ***Type 316 stainless steel*** snaps offer maximum corrosion resistance.

S-Hooks—For Lifting

Ideal for paint lines, conveyor systems, and other applications where small lifting eyes or holes cannot accommodate foundry hooks and tapered-tip hooks.

Alloy steel hooks are good where corrosion is not a factor.

Type 316L stainless steel hooks provide maximum corrosion resistance.

Work Load Limit, lbs.	Dia.	(A)	(B)	(C)		Each

S-Hooks with Latches—Not for Lifting

1

2

For extra security, latches on these hooks snap back into place to secure your load.

Plastic hooks are lightweight and won't scratch your surface. Color is black.

400 series stainless steel hooks have a black powder-coated finish and offer excellent corrosion resistance. ***Type 316 stainless steel*** hooks provide maximum corrosion resistance.

About Pulleys, Mounted Pulleys, and Pulley Blocks

Use pulleys, mounted pulleys, and pulley blocks to change the direction of one or more ropes (lines) as well as to make it easier to lift and haul loads.

A ***pulley*** is a grooved wheel. The groove is designed to minimize wear on the rope. A ***mounted pulley*** is one or more pulleys in a metal housing that has a mounting plate for permanent installation. A ***pulley block*** is one or more pulleys with a wood, plastic, or metal housing that usually has some sort of mounting hardware (for example, a hook or an eye) for suspending the pulley. For more information about pulley blocks, see page 1450.

You can reduce the force needed to move a load by increasing the number of pulleys in your system. Multiple pulley systems also provide finer motion control by reducing the amount of load movement.

Angle Factor Multipliers	
Angle	Factor
0°	2.00
30°	1.93
45°	1.84
60°	1.73
90°	1.41
120°	1.00
150°	0.52
160°	0.35
180°	0.00

Work Load Limit— The maximum weight pulleys and pulley blocks and their connecting fittings are designed to hold.

You must determine the total load being imposed on each pulley in your system to properly determine the capacity you'll need. The load on a single pulley can vary depending on the angle between the incoming and departing ropes.

The chart at left indicates what factor you should multiply your rope pull by to determine your load on the pulley.

For example, if 1,000 lbs. of force is applied to your single-pulley system, and the angle between the incoming and departing ropes is 60°, then the load on the pulley is 1,730 lbs. (1,000 lbs. × 1.73 factor = 1,730 lbs.). Using the same example, if the angle is 0° (ropes are parallel), then the load on the pulley is 2,000 lbs. (1,000 lbs. × 2 factor = 2,000 lbs.).

Size Selection— The capacity and life span of wire and fibrous rope is reduced when used over pulleys. To minimize these effects, we recommend you choose the largest possible pulley diameter. By doing this, you'll minimize the bending stresses on your rope.

Pulley Gauge Set— Ensure the tread of your pulley is the appropriate size for your wire rope as well as check the pulley groove for wear. Set includes 14 steel gauges for 1/4″ to 1 1/2″ wire rope diameters.

Pulleys

Acetal and Nylon Pulleys for Wire Rope

1

2

3

4

5

6

Acetal and nylon pulleys are light in weight, yet provide corrosion resistance. These pulleys are ideal for small-diameter wire rope.

(1) Acetal pulleys are corrosion and moisture resistant.

(2) Nylon pulleys are corrosion and impact resistant.

(3-6) High-strength nylon pulleys are corrosion and impact resistant with added material for strength, reduced friction, and longer pulley and rope life.

Bearings—*Plain bore* pulleys ride directly on the shaft. Use in light-duty applications. *Precision ball bearings* provide smooth rotation and are double-shielded to keep out contaminants. *Plain bronze bearings* are long lasting. Ideal for slower moving applications. *Plain stainless steel bearings* provide corrosion resistance. *Roller bearings* are for use in continuous-run applications.

For information about pulleys, mounted pulleys, and pulley blocks, see pages 1446 and 1450.

Cast Iron, Steel, and Stainless Steel Pulleys for Wire Rope

Cast iron, zinc-plated steel, and stainless steel pulleys are stronger than acetal and nylon pulleys for handling small-diameter wire rope.

(1) Cast iron pulleys handle high capacities and have a painted finish.

(2-4) Zinc-plated steel pulleys are strong and corrosion resistant. *Style 2* and *Style 4* are machined for tighter tolerances. *Style 3* are stamped and riveted.

(5) Type 316 stainless steel pulleys provide superior corrosion resistance.

Bearings—*Plain bronze bearings* are long lasting. Ideal for slow moving applications. *Precision ball bearings* run smooth and quietly. *Ball bearings* create less friction, making them ideal for faster applications and quick direction changes. *Shielded stainless steel ball bearings* resist corrosion and contamination.

Premium Steel Pulleys for Wire Rope

Heavy steel construction makes these pulleys stronger and more durable than our other steel pulleys. They are machined to tight tolerances for less wear on the wire rope and have larger ODs to minimize bending stresses. All have a tough, chip-resistant powder-coated finish.

(6) Have long lasting plain bronze bearings that are ideal for use in slow moving applications.

(7) Have maintenance-free sealed ball bearings that keep moving parts free of debris for smooth rotation.

Pulleys for Fibrous Rope

1

2

3

4

5

6

Choose from a variety of pulleys to handle fibrous rope.

(1) Acetal pulleys are corrosion and moisture resistant.

(2&3) Aluminum pulleys are lighter in weight than our other metal pulleys.

(2,3&4) Galvanized cast iron pulleys are strong and corrosion resistant.

(5&6) Type 316 stainless steel pulleys offer maximum corrosion resistance.

Bearings—*Plain bore* pulleys ride directly on the shaft. *Sealed needle roller bearings* are maintenance free—ideal for continuous-run applications. *Plain bronze bearings* are long lasting for use in slow-moving applications. *Sealed stainless steel ball bearings* are maintenance free and provide smooth rotation.

Mounted Pulleys for Wire Rope

7

8

9

10

11

12

13

Guide and change the direction of your wire rope with these pulleys. Units consist of one pulley mounted in a housing that has a mounting plate for permanent installation.

(7) Bronze unit offers corrosion protection.

(8-11) Galvanized steel come in a variety of styles and offer corrosion resistance.

(12) Zinc-plated steel units are corrosion resistant and have a machined pulley and a stamped mounting plate.

(13) Type 304 stainless steel offer maximum corrosion resistance. Pulley and mounting plate are machined.

Bearings—*Plain bore* pulleys ride directly on shaft. *Plain bronze bearings* have less friction and protect the shaft and bore from wear. *Sealed double ball bearings* are maintenance free and offer smooth rotation.

Mounted Pulleys for Fibrous Rope

Guide and change the direction of your fibrous rope with these pulleys. Units consist of one pulley mounted in a housing that has a mounting plate for permanent installation.

(6) Bronze units provide corrosion resistance.

(7) Aluminum units are lighter in weight than our other metal mounted pulleys.

(8) Nickel-plated malleable iron units swivel to align with the pulling direction.

(9-13) Galvanized iron units have good corrosion resistance.

(14) Type 316 stainless steel unit offers superior corrosion resistance.

(15) High strength nylon unit is corrosion and impact resistant with added material for strength, reduced friction, and longer pulley and rope life.

Bearings—*Plain bore* pulleys ride directly on the shaft. *Plain nylon bearings* are corrosion resistant and protect the shaft and bore from wear. *Ball bearings* provide smooth rotation.

♦ Zinc-plated steel mounting plate.

Warning! ***Never exceed work load limits. Never use to lift people or items over people.***

For information about pulleys, mounted pulleys, and pulley blocks, see page 1446.

About Pulley Blocks

Pulley blocks, also known as shell blocks, consist of a single, double, or triple pulley enclosed in a housing that has mounting hardware for suspending the block. A rope end is fed through the housing for operation.

Most often the mounting hardware is a hook, eye, or shackle (see mounting hardware styles below). However, some units have mounting holes so you can attach your own mounting hardware (this style is also known as a tail block).

Pulley-access blocks, also known as snatch blocks, open from the side (see styles below) so it's easier to install the rope—no free rope end is needed. They consist of a single or double pulley enclosed in a housing that has mounting hardware for suspending the block.

Most often the mounting hardware is a hook, eye, or shackle (see mounting hardware styles below). Some units also include a tie-off bracket (also known as a becket) mounted to the housing for easier set up in multiple-block applications.

(1-4, 6-10, 12) Steel— The strongest pulley blocks we offer. *Zinc-plated* and *galvanized steel* are corrosion resistant. *Heavy duty steel* are heavier gauge to withstand the most demanding conditions.

(5&11) Stainless Steel— Offer superior corrosion resistance.

Bearings— *Plain bronze bearings* are long lasting for use in slower moving applications. *Roller bearings* spin freely without resistance. *Ball bearings* have less friction, making them ideal for faster applications and quick direction changes. *Plain bore* pulleys ride directly on the shaft.

♣ Has needle bearings. ▲ Does not have tie-off bracket. Has plain bronze bearings.

Manhole-Cover Lifter

Remove manhole covers by yourself without risking pinched fingers and crushed feet. A long handle gives you the extra leverage you need to lift and swing covers as heavy as 500 lbs. with minimal effort.

Made of steel, lifter is 22" Ht. × 60" Lg., and adjusts to fit most manhole cover sizes.

8906T65 ..... $220.01

Pulling Tongs

Also known as skidding tongs, these specially designed tongs have finely ground points to grab and hold even the hardest wood while you pull it. When tension is applied, the grip increases. Tongs are made of alloy steel. Meet ANSI/ASME B30.20.

Note: Never use for lifting. Not rated with a work load limit.

For Material Thickness	Closed Size, Ht. × Wd.	Eye ID		
3 9/16"-16"	19 1/2" × 9 1/2"	2 1/2"	**3374T16**	$104.11

2" × 25'	4,200	**3169T26**	16.42
3" × 20'	6,500	**3169T41**	24.75

Warning! *Never exceed work load limits. Never use to lift people or items over people.*

About Winches

Winch Capacity— Capacity drops as rope is wound on the drum. *First layer capacity* requires a minimum of five wraps of rope or two wraps of strap on the drum with no overlap. *Full drum capacity* is the lowest capacity.

Hand Winch Gear Ratio— A *high gear ratio* such as 3:1 equals three handle turns for one full turn of the drum. The load can be moved quickly, but more effort is required. A *low gear ratio* such as 22:1 equals 22 handle turns for one full turn of the drum. The load doesn't move as quickly, but less effort is required.

For mounting hole dimensions of the hand winches on this page, go to mcmaster.com and search for **3644TAC**.

Horizontal-Pulling Hand Winches

With Empty Drum

With Empty Drum and Two Gear Ratios

With Strap Installed on Drum and Cover

No power needed—these winches can be used anywhere. Plus, they are more economical than electric winches. All are corrosion-resistant zinc-plated steel and have riveted stamped gears. A crank handle lets you control the winch speed. Ratchet can be disengaged so drum can rotate freely for quick and easy attachment to the load.

Winch covers not only protect the gears, they prevent injury. Made of black polypropylene. Installation hardware is included.

Winches with Empty Drum— You pick the best material and length for your application. Choose from winches for fibrous- and wire-rope (sold separately). The rope is the diameter listed and includes a hook (see page 1453 for additional sizes).

Winches with Strap Installed on Drum— Use right out of the box. Strap is low-stretch polyester and wraps neatly around the drum to prevent tangles and kinks in the line.

Winches with two gear ratios reduce user fatigue. They provide quick winding in high gear and easier pulling in low gear.

Covers for Winches		Pair

Precise-Positioning Horizontal-Pulling Hand Winches

Intermediate Duty

When you stop cranking the handle, the worm gears prevent further movement and hold your load exactly where you want it. Winches are made of steel. They are used with wire rope (sold separately). The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes).

Intermediate duty winches are lightweight and compact with riveted stamped gears.

Heavy duty winches have one-piece machined gears for durability. All except 3732T17 have the gears enclosed by a cast-iron housing.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

For information about winches, see page 1454.

For mounting hole dimensions of the hand winches on this page, go to mcmaster.com and search for **3644TAC**.

Incline-Pulling Hand Winches with Brake

Just what you need for incline-pulling applications—winches with an automatic brake to prevent runaway loads when the handle is released. All are made of corrosion-resistant zinc-plated steel and have riveted stamped gears. They are used with wire rope (sold separately). The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes).

Enclosed-gear winches are for harsh environments. The enclosure not only protects the gears, it also prevents injury.

Lifting Hand Winches with Brake

These winches have an automatic brake that keeps the load in place when the handle is released. All have one-piece machined gears for durability and are used with wire rope (sold separately). The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes).

Enclosed Gear— Enclosure not only protects gears from dirt and debris, it also prevents injury.

Totally Enclosed— Covered by a housing. Ideal for harsh environments and outdoor applications.

Type 304 stainless steel winches provide corrosion resistance.

Steel winches have a powder-coated finish (unless noted).

Precise-positioning winches are also known as worm-gear winches. They allow more controlled movement so you can hold the load exactly where you want it. 3732T15 can also be powered by a maximum 400 rpm power drill using a 1 1/8″ hex socket (not included).

Wall-mount winches have a side-mount plate for attaching the winch to a wall while still allowing for handle clearance.

115 VAC Electric Winches

For information about winches, see page 1454.

For mounting hole dimensions of the electric winches on this page, go to mcmaster.com and search for **9475TAC**.

115 VAC Horizontal-Pulling Winches

Enclosed Gear

Totally Enclosed

Ready when you need them, these winches plug into any standard wall outlet. They have a handheld push-button control with forward and reverse functions and include the wire rope. The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes). All power cords have a three-prong plug.

Enclosed-gear winch has an aluminum housing that protects the gears from dirt and debris and also prevents injury. Duty cycle at full load is maximum 20 seconds continuous on, 30 minutes off. Winch has an aluminum drum, steel and aluminum gears, a tension plate to wind wire rope properly on drum, a 6-ft. control cord, and a 6-ft. power cord.

Totally enclosed winches are covered by a polyethylene housing. Ideal for harsh environments and outdoor applications. Winches have steel gears and drum. Duty cycle at full load is maximum 3 minutes continuous on, 30 minutes off. Units have a 10-ft. control cord and a 10-ft. power cord.

115 VAC Incline-Pulling Winch

This winch requires only minimal cool-down time. Plus, worm gears give you precise load control. Unit has double-reduction gears for less stress on the motor. Gears are made of hardened steel and bronze and are enclosed in an oil bath for constant lubrication and longer life. Housing is aluminum. Drum is steel with aluminum flanges. Winch has a hand-held toggle control with forward and reverse functions and is used with wire rope (sold separately).

The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes). Duty cycle at full load is max. 1 minute continuous on with just 1 minute off. Control cord is 10 ft. long; power cord is 10 ft. long with a three-prong plug.

115 VAC Lifting Winches

A

B

C

D

E

These winches have a brake that holds your load even when the power is turned off. They have a cast aluminum housing and drum (unless noted) and machine-cut bronze gears (unless noted) enclosed in an oil bath for constant lubrication and longer life. All come with a handheld push-button control with forward and reverse functions and are used with wire rope (sold separately). The rope is the diameter listed and includes a hook (see page 1453 for additional sizes). All power cords have a three-prong plug. Duty cycle at full load is maximum 15 minutes continuous on, 45 minutes off.

(A) Has a plate to guide the wire rope on and off the drum, 6-ft. control cord, and an 8-ft. power cord.

(B&E) Have bronze and steel gears, 10-ft. control cord, and 15-ft. power cord. *Style E* has a machined steel drum.

(C) Has a plate that guides the wire rope on and off the drum. Control cord is 16 ft. long; power cord is 16 ft. long.

(D) Control cord is 6 ft. long; power cord is 8 ft. long.

For information about winches, see page 1454.

For mounting hole dimensions of the electric winches on this page, go to mcmaster.com and search for **3075TAC**.

12 VDC Compact Horizontal-Pulling Winches

For use in tight spaces, these winches hook up to any 12 VDC power source. All have a handheld toggle control with forward and reverse functions, an automatic brake, and rollers to guide the wire rope on and off the drum. Winches also have an automatic-reset circuit breaker for motor protection and a clutch to disengage the gears so drum can rotate freely for quick and easy attachment to the load. The wire rope and cable for connecting to the battery are included. The rope is the diameter listed and includes a hook (see page 1453 for additional sizes). The drum and gear housing are cast aluminum; motor housing is steel. Duty cycle at full load is max. 20 seconds continuous on, 20 min. off.

Enclosed-gear winches keep dirt and debris off the gears and also prevent injury. Control cord is 15 ft. long; battery cable is 8 ft. long.

Totally enclosed winches are ideal for harsh environments and outdoor applications. Control cord is 30 ft. long; battery cable is 5 ft. long.

12 VDC Incline-Pulling Winches

These high-capacity winches operate from any 12 VDC power source. They have a handheld control with forward and reverse functions and a clutch to disengage the gears so drum can rotate freely for quick and easy attachment to the load. All have steel gears and drum.

Economy winch has a cast aluminum housing. The wire rope is included. The rope is the diameter listed and includes a hook (see page 1453 for additional sizes). Duty cycle at full load is max. 60 seconds continuous on, 20 min. off. Control cord is 15 ft. long; battery cable is 6 ft. long.

Premium winches have a steel motor housing. Winches are used with wire rope (sold separately). The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes). Duty cycle at full load is max. 30 seconds continuous on, 10 min. off. Control cord is 32 ft. long; battery cable is not included (see page 747).

3104T36 and 3104T37 have thermal overload protection to prevent motor damage. 3104T36 has an aluminum gear housing. 3104T37 and 3104T38 have an aluminum and steel gear housing.

12 VDC Lifting Winches

These winches have a load-holding brake and run off any 12 VDC power source. The motor housing and gears are steel; gear housing is steel and aluminum. Drum is cast aluminum. Winches include a handheld toggle control and a separate control box that connects to the battery. Control cord is 12 ft. long. Cable for connecting to the battery is not included (see page 747). The control box includes a 16″ cable and can be mounted directly to the winch (hardware included). All are used with wire rope (sold separately). The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes).

2647T33 duty cycle at full load is max. 75 sec. continuous on, 10 min. off.
2647T35 duty cycle at full load is max. 2 1/2 min. continuous on, 10 min. off.
2647T36 duty cycle at full load is max. 100 sec. continuous on, 10 min. off.

Air-Powered, Hydraulic & Capstan Winches

For information about winches, see page 1454.

For mounting hole dimensions of the air-powered, hydraulic, and base-mount capstan winches on this page, go to mcmaster.com and search for **38635TAC**.

Air-Powered Lifting Winches

Intermittent Duty

1,500-lb. First Layer Cap. Continuous Duty

5,000-lb. First Layer Cap. Continuous Duty

Because they run on air, these winches give you long operating times and variable speed control. They also have an automatic brake that holds the load when the motor stops. All have forward and reverse functions. They are used with wire rope (sold separately). The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes). Air hose is not included, see pages 240-246.

Intermittent-duty winch is aluminum with steel gears enclosed in an oil bath for continuous lubrication, resulting in reduced wear. The included valve control regulates speed. Duty cycle at full load is maximum 15 minutes continuous on, 45 minutes off. Operates on 80 cfm @ 100 psi. Motor is 1.2 hp.

Continuous-duty winches are specially designed for continuous operation. They are made of steel and have gears that operate at higher speeds than the intermittent-duty winch. A hand-operated toggle control regulates speed. Units operate on 100 cfm @ 90 psi.

3651T21, *T22,* and *T12* have a 4-hp motor; 3651T14 has an 8-hp motor.

Hydraulic Incline-Pulling Winches

These winches combine hardened steel gears and a powerful hydraulic motor for reliable operation. An automatic brake holds your load securely when power is shut off and a locking clutch lever disengages the gears so drum can rotate freely for quick and easy attachment to the load.

All have 7/8″-14 UNF O-ring ports for hydraulic power connection. They are used with wire rope (sold separately). The wire rope is the diameter listed and includes a hook (see page 1453 for additional sizes). Gear housing is cast aluminum; drum and motor housing are steel. Duty cycle is maximum 20 minutes continuous on, 20 minutes off.

Electric Capstan Winches

Pole Mount

Base Mount

These winches assist in manual pulling, lifting, and lowering applications. All have forward and reverse functions. Gears are hardened steel and bronze and are enclosed in an oil bath for continuous lubrication, resulting in reduced wear. The frame is steel; the housing is aluminum. Fibrous rope (not included, see pages 1410-1413) wraps around, but does not accumulate on the concave drum. Duty cycle at full load is maximum 15 minutes continuous on, 45 minutes off.

Pole-mount winch has a 1.4-hp motor and includes pole binder hardware. Unit has a foot-operated control with 10-ft. cord. Power cord is 15 ft. long and has a three-prong plug.

Base-mount winches are for surface mounting.

3744T18 has a 1.4-hp motor and a foot-operated control with a 10-ft. cord. Power cord is 15 ft. long and has a three-prong plug.

3744T16 has a handheld control with a 10-ft. cord. Cable for connecting to a 12 VDC battery is not included, see page 747 for battery cable.

Capacity, lbs.	Gear Ratio	O'all Size, Lg.×Wd.	Drum Diameter	Line Speed @ Rated Capacity, fpm	Voltage	Amp Draw @ Rated Capacity

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

Fibrous Rope Ratchet Pullers

Twisted fibrous rope passes through these pullers without coiling on the drum so you can pull items longer distances. The rope is polyester and is lighter than wire rope and not prone to kinking. Pullers have a steel body and come with forged steel hooks with latches. 33425T21 and 33425T22 include components to convert to double line. Double line gives you twice the capacity, but half the reach.

Cap., lbs.	Reach, ft.	(A) Min.	Handle Lg.	Rope Dia.	Hook Opening		
1,500	20	27″	19″	1/2″	3/4″	33425T7	$90.34

1,500	75	27″	19″	1/2″	3/4″	33425T9	119.49
1,500/3,000	50/25	28″	18″	1/2″	3/4″	33425T21	118.87
1,500/3,000	100/50	28″	18″	1/2″	3/4″	33425T22	137.74

Wire Rope Ratchet Pullers

Wire rope provides strength in your pulling applications. All pullers have forged steel hooks with latches. When not under load, the ratchet can be disengaged (unless noted) so drum can rotate freely for quick and easy attachment to the load. Units with *single/double* lines include components to convert to double line. Double line gives you twice the capacity, but half the reach.

General Duty—Made of steel and include 7×19 galvanized wire rope.

Heavy Duty—Made of iron and include 6×37 wire rope.

Premium—Made of cast aluminum and include 7×19 galvanized wire rope (unless noted) and swivel hooks. The handle is reversible and designed to bend when puller is overloaded. Pullers have an integral RFID chip which allows location and maintenance tracking. They also have a guide so wire rope wraps properly on the drum. 3349T23 has a telescoping handle. ***Rapid-release*** units release wire rope four times faster than the other pullers. A lever-actuated mechanism allows the pawl to come in contact with every fourth ratchet tooth, eliminating 75% of the stops for faster operation. When fine positioning is needed, the selector lever returns puller to normal action. ***Corrosion-resistant*** pullers have stainless steel wire rope and anodized aluminum castings that make them ideal for marine and other corrosive environments.

Also Available: Replacement handles for premium pullers. Please ask for 3349T888 and specify part number.

Strap Ratchet Pullers

The weather-resistant strap on these pullers is lighter than wire rope and ideal for using over surfaces that would be damaged by wire rope. Strap is made of nylon (unless noted). Pullers have a steel body and come with forged steel hooks with latches.

Easy-store pullers have a folding handle for storage in the included carrying case.

Easy Store

General Duty

◆ Strap is polyester.

Warning! **Never exceed capacities. Never use to lift people or items over people.**

Chain Ratchet Puller/Hoists

With no brake to disengage, these pullers are easier to use. When not under load, the ratchet disengages allowing the chain wheel to rotate freely for quick and easy attachment to the load. Body is aluminum and has forged steel swivel hooks with latches. Chain is hardened steel. A stop on the end of the chain prevents it from being pulled completely through the hoist.

To Order: Please specify reach. Standard reaches are 5, 10, 15, and 20 ft.; other reaches are available.

General duty CM Rigger pullers have a short handle for use in confined areas.

Premium Coffing RA pullers have a long handle for greater leverage and easier lifting. Meet ANSI/ASME B30.21.

Tool Box Lever Chain Hoists

With their compact design, not only can these hoists be stored in your tool box, they are great for tight spaces. Hoists have a steel body, forged steel top and bottom swivel hooks with latches, and a mechanical brake to securely hold the load. Levers rotate 360° for use in any position. The neutral position disengages the gears and allows the chain to be pulled through the hoist for quick and easy attachment to the load. A stop on the end of the chain prevents it from being pulled completely through the hoist. Meet ANSI/ASME B30.21.

Economy hoists have zinc-plated steel chains. ***Premium*** hoists have nickel-plated steel chains.

Cap., lbs.	Lift, ft.	Lever Effort @ Cap., lbs.	(A) Min.	Hook Opening	Lever Length		
Economy

1,100	5	62	9 23/32″	1″	7 3/32″	3030T2	222.88

Lever Chain Hoists

Three-position control and a mechanical brake on these hoists provide load control and positioning. The neutral position disengages the gears and allows the chain to be pulled through the hoist for quick and easy attachment to the load. All have hardened steel chain. A stop on the end of the chain prevents it from being pulled completely through the hoist. Top and bottom swivel hooks with latches are forged steel. Hoists are suitable for outdoor use. Meet ANSI/ASME B30.21. The lever on *Styles 1, 2,* and *4* rotates 360° for use in any position.

To Order: Please specify lift. Standard lifts are 5, 10, 15, and 20 ft.; other lifts are available.

(1) Economy Steel with Overload Protection— Lever prevents gears from engaging when the load exceeds capacity.

(2) General Duty Steel— These Coffing LSB hoists have a short-stroke lever for maneuverability in tight areas.

(3) Premium Steel— These Harrington LB hoists are compact and lighter in weight than other hoists with comparable capacities, yet are rugged enough for big jobs. *Hoists with overload protection* give two visual and one audible signal when the load exceeds capacity.

(4) Premium Aluminum with Short Lever— Made by CM, they have a short-stroke lever for use in close quarters. The lever on *hoists with overload protection* prevents the gears from engaging when load exceeds capacity.

(5) Premium Aluminum with Long Lever— Made by CM, they have an extra-long lever for greater take-up per stroke resulting in faster lifting. The lever on *hoists with overload protection* bends when the load exceeds capacity.

Warning! **Never exceed capacities. Never use to lift people or items over people.**

Hand Chain Hoists

Use these hand chain hoists to lift your loads in areas where getting power for an electric hoist would be difficult. Choose from hook-mount and trolley-mount hoists. All come with forged steel bottom swivel hook with a latch, a brake that securely holds the load, and hardened steel chain (unless noted). Hand chain length is 2 ft. shorter than the lift. Hoists meet ANSI/ASME B30.16 and HST-2M.

Hoists with overload protection will not operate when the load exceeds capacity.

To Order: Please specify lift. Standard lifts are 8, 10, 12, 15, 20, and 30 feet (unless noted); other lifts are available.

Hook Mount— Have a versatile forged steel swivel top hook with latch that can quickly be hung from almost any structure.

Trolley Mount— Trolleys roll along all styles of I-beams for easy load movement. They take up less overhead room than hook-mount hoists and can be permanently mounted on fixed beams as well as on jib, gantry, and workstation cranes.

Hoists with a manual trolley require the user to move the trolley; ideal for lighter capacity loads and lifting applications less than 20 feet. *Hoists with a hand chain trolley* provide more precise load positioning. The user pulls the hand chain to move the trolley; ideal for higher capacity loads and lifting applications over 20 feet.

(1) Economy steel are CM's Model 622 and provide good lifting capacity at an economical price for infrequent lifting needs.

(2) Steel with overload protection have gears that are totally enclosed to protect them from debris and contamination for consistent smooth operation. A unique handwheel design allows you to operate the hand chain in any direction without binding.

(3) Steel with rotary handwheel and overload protection are CM's Hurricane hoist. A 360° rotating handwheel cover allows the hand chain to be used in any direction.

(4&7) Heavy duty steel are Chester Hoist Model AM. They have rugged construction for more demanding applications, yet require less user effort to use than the economy model.

(5, 8&9) Premium aluminum with overload protection are CM's Cyclone. A large handwheel reduces user effort to lift a load. Ideal for frequent lifting operations where user fatigue is a concern.

Confined-space hoists are more compact for use in areas where space is limited.

(6) Spark resistant have bronze alloy swivel hooks, aluminum bodies, and stainless steel lifting chain for use in areas where spark resistance is essential.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

Fibrous Rope Pulley Hoists

Great for use in areas where electricity is not available. These hoists are lighter in weight than hand chain hoists so they are easy to transport. Plus, the fibrous rope reduces the chance of hand injuries.

Economy have pivoting hooks. *Style 1* has steel wire-formed hooks, a cam-lever lock to hold the load, braided polypropylene rope, and a release cord; *Style 2* has zinc-plated forged steel hooks with latches, braided nylon rope, and a ratcheting lock to hold the load.

Corrosion-resistant hoists are great in harsh environments. They have double-braided polyester rope, acetal sheaves, Type 316 stainless steel blocks, and a rope cleat to hold the load. Both have stainless steel top and bottom swivel snaps.

Electric Wire Rope Hoist

This hoist requires only an electric power source for operation and has a versatile top hook that can be hung from almost any structure.

Hoist is single phase, 115 VAC, 60 Hz and includes 7×19 galvanized steel wire rope. It has an aluminum housing, forged steel top and bottom swivel hooks with latches, and a handheld toggle control. Control cord is 6 ft. long; power cord is 12″ long with a three-prong plug. A disc brake holds the load. Thermal motor protection prevents overheating and an upper limit switch keeps the load from hitting the hoist. UL listed.

Workstation Hoists

Electric Chain

Air-Operated Wire Rope

Small and easy to use, these hoists are ideal for light load manipulation at assembly workstations.

Electric chain hoists are dual speed and have a toggle control on the handle for selecting the speed. To adjust the load, simply push up or pull down on the ergonomic handle. All are single phase, 120 VAC, 60 Hz. Disc and mechanical brakes hold the load and an upper limit switch regulates upward chain travel to prevent damage to the hoist. Hoists have an aluminum housing; a forged steel rigid top hook with latch; and a forged steel swivel bottom hook with latch. Chain is manganese alloy and nickel; chain container is included. Power cord is 16 ft. long with three-prong plug. Meet ANSI/ASME H2.

Air-operated wire rope hoist is variable speed with the control conveniently located on the handle for continuous use and slow precise movements. A disc brake holds the load. Hoist has a cast iron housing, forged steel top and bottom swivel hooks with latches, and 5/32″ dia. 7×19 galvanized wire rope. Operates on 21.2 cfm at 95 psi. Air inlet is ⅜″ NPT. Air hose is not included, see pages 240-246.

Electric Wire Rope Winch/Hoists

These combination winch/hoists allow you to pull and lift with one portable tool. Motor and mechanical brakes hold the load. Hoists have a glass-filled nylon housing, a forged steel swivel bottom hook with latch, and a control switch mounted in the handle. An overload protection switch shuts hoists off if load exceeds capacity. Both hoists are single phase and include 7″×19″ galvanized steel wire rope.

3630T61 has a 12″ power cord. It operates on 110 VAC, 60 Hz. 3630T62 is cordless and includes two NiMH rechargeable battery packs. It operates on 24 VDC, 60 Hz.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

For replacement parts, see page 1468.

About Electric Chain Hoists

The hoists feature a motor brake that holds the load when the control switch is released or if there is a loss of power.

Continuous run time per hour is restricted to prevent heat buildup from damaging the motor and gears. Run time may be affected by temperature, dust, humidity, and exposure to weather and corrosive fumes. Hoists are rated ANSI/ASME H4 (unless noted) and meet ANSI/ASME B30.16.

Your hoist will run inefficiently, or not at all, if it is operating on low voltage. Low-voltage conditions occur when using power cords with small conductors, or when the distance from the power source to the hoist is 100 feet or more.

An upper limit switch regulates upward chain travel to prevent damage to the hoist; a lower limit switch prevents the chain from being released through the hoist during operation. Our hoists include a chain container (unless noted).

Note: Replacement parts for the electric chain hoists on pages 1463-1466, as well as parts for other hoist models, are available on page 1468.

CM Shopstar Compact Electric Chain Hoists

- Disc-style motor brake
- Maintenance-free gears
- Overload protection prevents hoists from running if the load exceeds capacity
- A stop on the end of the chain prevents it from being pulled completely through the hoist
- Hardened alloy steel chain
- Vinyl chain container is included with standard lifts, unless noted
- UL listed; ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from 115 VAC, 60 Hz, single phase; 230 VAC, 60 Hz, three phase; and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

These economical hoists are small, lighter in weight, and easier to move between lift points than other electric chain hoists. They offer the shortest distance between hooks, making them ideal for lifting in small, tight spaces. Hoists feature an aluminum housing, forged steel rigid top hook with latch and swivel bottom hook with latch, all with an acid-resistant, powder-coated finish and a handheld push-button control. Control is in a NEMA 4 (indoor/outdoor) housing; control cord is 4 feet shorter than the lift. Power cord is 6 feet long.

To Order: Please specify voltage and lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

115 VAC hoists have a three-prong plug; ***230 VAC/460 VAC hoists*** do not have a plug (see pgs. 784-789 for plugs).

★ 15- and 20-ft. lifts have a fabric chain container.

CM Valustar Electric Chain Hoists

- Caliper-style motor brake
- Maintenance-free gears
- Overload protection prevents hoists from running if the load exceeds capacity
- A stop on the end of the chain prevents it from being pulled completely through the hoist
- Hardened alloy steel chain
- Fabric chain container is included with standard lifts
- ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from 115 VAC, 60 Hz, single phase; 230 VAC, 60 Hz, three phase; and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

More rugged and heavy duty than the Shopstar, yet economical. Hoists feature an aluminum housing, forged steel rigid top hook with latch and swivel bottom hook with latch, all with an acid-resistant, powder-coated finish and a handheld push-button control. Control is in a NEMA 4 (indoor/outdoor) housing; control cord is 4 feet shorter than the lift. Power cord is 5 feet long and does not include a plug (see pages 784-789 for plugs).

To Order: Please specify voltage and lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

Budgit Dual-Brake Electric Chain Hoists

- Disc-style motor brake/mechanical load brake
- Gears are enclosed in an oil bath
- Overload protection prevents hoists from running if the load exceeds capacity
- Upper and lower limit switches
- Hardened alloy steel chain
- Plastic chain container comes with standard lifts, unless noted
- ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from 115 VAC, 60 Hz, single phase; 230 VAC, 60 Hz, single phase; 230 VAC, 60 Hz, three phase; and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

Get the added protection of two brakes—a disc-style motor brake, plus a mechanical brake. Hoists have an aluminum housing with a painted finish; a forged steel swivel top hook with latch and painted finish; a plain-finish forged steel swivel bottom hook with latch; and a handheld push-button control. Control is in a NEMA 4X (corrosion-resistant) housing; control cord is 4 feet shorter than the lift. Power cord is 3 feet long and does not include a plug (see pages 784-789 for plugs).

To Order: Please specify voltage and lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

For information about electric chain hoists, see page 1463. For replacement parts, see page 1468.

CM Lodestar Electric Chain Hoists

Hook Mount

Manual Trolley Mount

Motorized Trolley Mount

- Disc-style motor brake
- Maintenance-free gears
- Overload protection prevents hoists from running if the load exceeds capacity
- Adjustable upper and lower limit switches
- Hardened alloy steel chain
- Chain container is included with standard lifts (unless noted)
- ANSI/ASME H4 rated (unless noted); meet ANSI/ASME B30.16
- Choose from hook, manual trolley, and motorized trolley mounts
- Choose from 115 VAC, 60 Hz, single phase; 230 VAC, 60 Hz, three phase; and 460 VAC, 60 Hz, three phase (unless noted)
- For replacement parts, see page 1468

Known for their reliability and long service, these hoists offer the broadest range of capacities and lifting speeds. Hoists have an aluminum housing with an acid-resistant, powder-coated finish; a powder-coated forged steel swivel bottom hook with latch; and a handheld push-button control. Control is in a NEMA 4 (indoor/outdoor) housing; control cord is 4 feet shorter than the lift. Power cord is 15 feet long and does not include a plug (see pages 784-789 for plugs). Chain container for 10-, 15-, and 20-ft. lifts is fabric; chain container for 25-, 30-, 40-, and 50-ft. lifts is steel.

To Order: Please specify voltage and lift. Standard lifts are 10, 15, 20, 25, 30, 40, and 50 feet; other lifts are available.

Hook mount have a forged steel rigid top hook with latch and an acid-resistant powder-coated finish.

Trolley mount have a steel trolley with a powder-coated finish. Trolley fits on tapered or wide (flat) flange I-beams.

Motorized trolleys have a 1/4-hp motor and travel 75 fpm. A handheld push-button control is included.

■ 40- and 50-ft. lift models do not include a chain container. ♦ Not available in 115 VAC; ANSI/ASME rating is H3.
♣ 25- to 50-ft. lift models do not include a chain container.

Powerlift Electric Chain Hoists

- Current-driven electromagnetic brake
- Gears are enclosed in an oil bath
- Overload protection prevents hoists from running if the load exceeds capacity
- Upper and lower limit switch
- Hardened nickel-plated steel chain
- Canvas chain container is included with standard lifts
- ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from 230 VAC, 60 Hz, three phase and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

The premium choice for handling your most demanding jobs. Hoists have a totally-enclosed, fan-cooled motor, a heavy duty chain guide, and a coil-free brake for increased reliability. A sealed aluminum housing with a powder-coated finish permits use indoors, outdoors, and in harsh environments. For quicker maintenance, units have easily replaced parts and a flip-down motor cover so service can be done without removing the hoist from the job site. All have a forged steel rigid top hook with latch and powder-coated finish; a forged steel swivel bottom hook with latch and powder-coated finish; and a handheld push-button control. The control is in an IP65 housing; control cord is 4 feet shorter than the lift. Power cord is 15 feet long and does not include a plug (see pages 784-789 for plugs).

To Order: Please specify voltage and lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

For information about electric chain hoists, see page 1463. For replacement parts, see page 1468.

Dual-Speed Electric Chain Hoists

- Disc-style motor brake
- Grease-lubricated gears
- Overload protection prevents hoists from running if the load exceeds capacity
- Adjustable upper and lower limit switches
- Hardened zinc-plated alloy steel chain
- Polymer chain container is included with standard lifts (unless noted)
- UL listed; ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from hook and manual trolley mounts
- Choose from 230 VAC, 60 Hz, three phase and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

Hoists have two speeds—a high speed for quick lifting and lowering and a low speed for precise positioning. They also have a multiple disc brake design that significantly reduces wear and extends brake life. Hoists have an aluminum housing with a painted finish; a zinc-plated forged steel swivel bottom hook with latch; and a handheld push-button control. Control is in a NEMA 4X (corrosion-resistant) housing; control cord is 4 feet shorter than the lift. Power cord is 15 feet long and does not include a plug (see pages 784-789 for plugs).

To Order: Please specify lift and voltage. Standard lifts are 10, 15, and 20 feet; other lifts are available.

Hook mount have a forged steel swivel top hook with latch and a painted finish. ***Manual trolley mount*** have a steel trolley with a painted finish. Trolleys fit on tapered or wide (flat) flange I-beams.

★ For hoist with 20-ft. lift, chain container is steel with a polyurethane finish.

Manual Trolley Mount

Varispeed Electric Chain Hoists

- Disc-style motor brake
- Maintenance-free gears
- Overload protection prevents hoists from running if the load exceeds capacity
- Adjustable upper and lower limit switches
- Hardened alloy steel chain
- Fabric chain container is included with standard lifts
- ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from hook and manual trolley mount
- Choose from 230 VAC, 60 Hz, three phase and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

Ideal in applications where positioning is critical, these hoists allow you to change or hold the speed at any time during operation. Hoists have an aluminum housing with an acid-resistant, powder-coated finish; a powder-coated forged steel swivel bottom hook with latch; and a handheld push-button control. Control is in a NEMA 4 (indoor/outdoor) housing; control cord is 4 feet shorter than the lift. Power cord is 15 feet long and does not include a plug (see pages 784-789 for plugs). Hoists are for indoor use only.

To Order: Please specify lift and voltage. Standard lifts are 10, 15, and 20 feet; other lifts are available.

Hook mount have a forged steel rigid top hook with latch and an acid-resistant, powder-coated finish.

Manual trolley mount have a steel trolley with a powder-coated finish. Trolleys fit on tapered or wide (flat) flange I-beams.

For information about electric chain hoists, see page 1463. For replacement parts, see page 1468.

Weatherstop Electric Chain Hoists

- Disc-style motor brake
- Maintenance-free gears
- Overload protection prevents hoists from running if the load exceeds capacity
- Adjustable upper and lower limit switches
- Hardened zinc-plated alloy steel chain
- Fabric chain container is included with standard lifts
- ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from 115 VAC, 60 Hz, single phase; 230 VAC, 60 Hz, three phase; and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

A sealed, weatherproof aluminum housing with an acid-resistant finish keeps out moisture and humidity, making these hoists the choice for outdoor and washdown applications. Hoists have a forged steel rigid top hook with latch and acid-resistant finish; a plain-finish forged steel swivel bottom hook with latch; and a handheld push-button control. Control is in a NEMA 4 (indoor/outdoor) housing; control cord is 4 feet shorter than the lift. Power cord is 15 feet long and does not include a plug (see pages 784-789 for plugs).

To Order: Please specify voltage and lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

Cleanchoice Electric Chain Hoists

- Disc-style motor brake
- Maintenance-free gears
- Overload protection prevents hoists from running if the load exceeds capacity
- Adjustable upper and lower limit switches
- Type 347 stainless steel chain
- Chain container is not included
- ANSI/ASME H4 rated; meet ANSI/ASME B30.16
- Choose from 115 VAC, 60 Hz, single phase; 230 VAC, 60 Hz, three phase; and 460 VAC, 60 Hz, three phase
- For replacement parts, see page 1468

For use in areas where cleanliness is required, these hoists have a sealed, unpainted aluminum housing and stainless steel chain and load hook to reduce corrosion and the chance of contamination. Hoists have a plain steel rigid top hook with latch; a Type 347 stainless steel swivel bottom hook with latch; and a handheld push-button control. Control is in a NEMA 4 (indoor/outdoor) housing; control cord is 4 feet shorter than the lift. Power cord is 15 feet long and does not include a plug (see pages 784-789 for plugs).

To Order: Please specify voltage and lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

About Air-Powered Chain Hoists

Unlike electric hoists, which have restricted run times, air-powered hoists have a cool-running motor suitable for continuous operation. They have either a pull control or lever that regulates the airflow to adjust the lifting speed. Air brakes automatically engage to secure the load when the motor is shut down. Some models also have a mechanical load brake that holds the load and provides precise movement and spotting. Meet ANSI/ASME B30.16.

Some hoists have mufflers to reduce the sound level during operation as well as mechanical chain stops to prevent damage by stopping the chain at a specified point during upward travel. Chain stops also keep the chain from being released through the hoist during operation.

CM ShopAir Air-Powered Chain Hoists

- Disc-style air brake
- Overload protection prevents hoists from running if the load exceeds capacity
- Lower mechanical stop
- Hardened alloy steel chain
- Vinyl chain container is included
- Meet ANSI/ASME B30.16

Compact and lightweight, these hoists are ideal for workstation applications. Hoists have an aluminum housing with an acid-resistant, powder-coated finish; a forged steel rigid top hook with latch; a forged steel swivel bottom hook with latch; and a handheld lever control with 6 ft. long hoses. A filter-regulator-lubricator is required to lubricate the gears and clean and regulate the incoming air (see pages 977-982).

1,000	10	0-11	11 15/16″	3/8″	34	1″	2340T44	1,964.85

Warning! Never exceed capacities. Never use to lift people or items over people.

For information about air-powered chain hoists, see page 1466.

For diagrams of replacement parts for these hoists, go to mcmaster.com and search for **3320TAC** for Budgit and **21955TAC** for Ingersoll-Rand.

Budgit Air-Powered Chain Hoists

- *2200 Series:* Shoe-style air brake
  6000 Series: Mechanical load brake
- *6000 Series:* Overload protection prevents hoists from running if the load exceeds capacity
- Upper and lower mechanical stops
- Muffler reduces operating noise
- Hardened alloy steel chain (unless noted)
- Metal chain container is included with standard lifts (unless noted)
- Meet ANSI/ASME B30.16

With Pull Control

Hoists have an aluminum housing with painted finish; a forged steel swivel top hook with latch and painted finish (unless noted); and a plain-finish forged steel swivel bottom hook with latch (unless noted). Control air hoses are 4 feet shorter than the lift. A filter-regulator-lubricator is required to lubricate the gears and clean and regulate the incoming air (see pages 977-982).

To Order: Please specify lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

Also Available: Replacement parts. Please ask for 3320T951 and specify part required, hoist capacity, lifting speed, lift length, and if hoist is spark resistant.

2200 Series— Use less air than the 6000 Series. ***6000 Series—*** Have a larger body and motor for higher capacities.

Spark resistant hoists have bronze alloy hooks with stainless steel latches and chrome-nickel stainless steel chain. Chain container not included. **Also Available:** Spark-resistant chain container. Please ask for 3320T777 and specify capacity.

Pull controls have up and down control cords for adjusting speed. ***Lever*** controls have a handheld control.

With Lever Control

Ingersoll-Rand Air-Powered Chain Hoists

- Disc-style air brake
- Upper and lower mechanical stops
- Muffler reduces operating noise
- Hardened zinc-plated steel chain
- Standard lifts include steel chain container
- Meet ANSI/ASME B30.16

Hook Mount with Pull Control

Hoists are designed for high-production and extreme duty applications. All have an aluminum housing with a painted finish and a forged steel swivel bottom hook with a latch. Controls are 4 feet shorter than lift. A filter-regulator-lubricator is required to lubricate the gears and clean and regulate the incoming air (see pages 977-982).

To Order: Please specify lift. Standard lifts are 10, 15, and 20 feet; other lifts are available.

MLK Hoists— For high-speed applications. ***HLK Hoists—*** For more demanding applications.

Hook mount have a forged steel swivel top hook with a latch. ***Manual trolley mount*** have a painted steel trolley. Trolleys fit on tapered and wide (flat) flange beams. ***Pull*** controls have up and down control chains. ***Lever*** controls have a specially designed handle to guard against accidental operation. They also have adjustment screws to limit the max. speed for each lift.

Bridge Crane Motorized Trolley-Mounted Electric Wire Rope Hoists

- Disc-style sealed motor brake
- Maintenance-free gears
- Overload protection prevents hoists from running if the load exceeds cap.
- Adjustable upper and lower mechanical stops
- 8×17, ¼″ dia. galvanized wire rope
- Rated ANSI/ASME H4, UL recognized, CSA certified
- Choose from 230 VAC, 60 Hz, 3-phase and 460 VAC, 60 Hz, 3-phase

Designed for permanent installation on a bridge crane, these hoists are rugged, yet run quieter than comparable electric chain hoists. Lift is 19′8″; trolley speed is 65 fpm. Hoists have a two-speed three-phase motor, a steel housing with a painted finish, a forged steel swivel bottom hook with latch, and a handheld push-button control that controls both the hoist and trolley. Control is in an IP55/NEMA 4 (indoor/outdoor) housing; control cord is 18′8″ long. Adjustable trolleys fit I-beam flange widths 3 5/32″ to 7⅞″, 7 29/32″ to 13″, or 13 1/32″ to 17 23/32″.

To Order: Please specify voltage and I-beam flange width range.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

Replacement Parts for Electric Chain Hoists

Minimize your downtime—original manufacturer parts keep your hoist in operation.

To Order: Replacement chain, please specify 10-, 15-, or 20-ft. lift.

Also Available: Other replacement parts. Please specify the manufacturer part number, hoist capacity, and voltage.

For diagrams of replacement parts for some of the electric chain hoists, go to mcmaster.com and search for the document listed. CM Shopstar: **23285TAC**; CM Valustar: **9477TAC**; Budgit: **3319TAC**; and CM Lodestar and Varispeed: **3316TAC**.

Warning! *Never exceed capacities. Never use to lift people or items over people.*

About Trolleys

Trolley with Hanger

Trolley with Crossbar

Before choosing a trolley, you'll need to know the height and flange width of the beam where you plan to mount the trolley. This way, you can be sure that the beam will accommodate the trolley's wheels and that the trolley will fit the beam's flange.

Designed especially for use with hook-mount hoists, our trolleys adjust to fit a range of beam flange widths. Plus, you don't have to slide them over the end—they can be taken apart for mounting anywhere along a beam.

Trolleys have either a hanger or a crossbar with a center groove where you attach the top hook of your hoist. The crossbar design is best suited for use where vertical space is limited.

All trolley wheels have a flange so they stay steady on the beam.

Minimum curve radius is the tightest curve along a beam that the trolley can freely navigate.

Wheel tread diameter is the part of the wheel that actually rests on the beam's flange.

Easy-Roll Manual Trolleys

- Cast iron wheels, unless noted
- Maintenance-free ball bearings
- Steel body

These trolleys are easy to roll. The body has wraparound bumpers to protect the wheels and to prevent the load from dropping if a wheel axle fails. The included spacing washers can be added and removed to fit the beam flange width. Use trolleys on tapered and wide (flat) flange beams.

CM 633 trolleys are known for their reliable service.

Premium offer quiet operation. They also have precision ball bearings for long life. *Style 2* has a 3/4″ dia. crossbar for hanging (no hanger). *Style 3* allows you to remove the hanger and use the crossbar for hanging if vertical space is limited.

Also Available: Replacement wheels for premium trolleys. Please ask for 3269T78 and specify trolley capacity.

✓ Has nylon wheels.

Extra-Stable Manual Trolleys

- Steel wheels
- Maintenance-free ball bearings
- Steel body

Two zinc-plated steel connecting bolts not only provide added stability and strength, but also allow trolleys to fit on a wider range of beam flange widths. The body has wraparound bumpers to protect the wheels and to prevent the load from dropping if a wheel axle fails. The included spacing washers can be added and removed to fit the beam flange width. Use trolleys on tapered and wide (flat) flange beams.

Cap., lbs.	Fits Beam Flange Wd.	Min. Beam Ht.	(A)	Min. Curve Radius	Wheel Tread Dia.	Hanger Hole Dia.		
550	2″ -8 11/16″	4″	3 15/16″	27″	2 11/32″	1 3/16″	3267T61	$138.55

Brawny Manual Trolleys

- Cast iron or steel wheels
- Maintenance-free ball bearings
- Steel body

Constructed of heavy-gauge steel, these are some of the most rugged trolleys around. The body extends past the wheels to protect them from damage. The included spacing washers can be added and removed to fit the beam flange width. Use trolleys on tapered and wide (flat) flange beams (unless noted).

Cap., lbs.	Fits Beam Flange Wd.	Min. Beam Ht.	(A)	Min. Curve Radius	Wheel Tread Dia.	Hanger Hole Dia.		
With Cast Iron Wheels								
2,000	3″ -5 5/8″	5″	5 3/4″	36″	4″	1 1/2″	3270T25	$332.35
4,000	3 1/4″-7″	6″	6 1/2″	36″	4″	1 1/2″	3270T26	443.13
With Steel Wheels								
8,000	4″ -6 1/2″	8″	7 3/4″	42″	5″	2 1/2″	3270T29♣	889.86
12,000	4 5/8″-7 1/8″	10″	8 3/4″	54″	6″	2 3/4″	3270T28♣	1,034.87

♣ Use on tapered flange beams only.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

For information about trolleys, see page 1469.

Tight-Turn Manual Trolleys

- Steel wheels
- Precision ball bearings with grease fitting (unless noted)
- Steel body

Two guide rollers on each side of these trolleys provide better tracking along tight curves. The rollers maintain contact with the beam flange to prevent wobbling and to keep the trolley body from coming in contact with the beam. The trolley body has wraparound bumpers to protect the wheels and to prevent the load from dropping if a wheel axle fails. The included spacing washers can be added and removed to fit the beam flange width. Use trolleys on tapered flange beams only.

Cap., lbs.	Fits Beam Flange Wd.	Min. Beam Ht.	(A)	Min. Curve Radius	Wheel Tread Dia.	Hanger Hole Dia.		
500	1 13/16″-2 5/8″	2 5/8″	3 1/4″	12″	1 7/8″	1 1/16″	9483T47▲	$94.92

2,000	2 5/8″ -4″	4″	4 1/4″	24″	3 3/16″	1 5/8″	9483T49	208.35

▲ Does not have grease fitting.

Corrosion-Resistant Stainless Steel Manual Trolleys

- 300 series stainless steel wheels
- Maintenance-free Type 440 stainless steel precision ball bearings
- 300 series stainless steel body

With their stainless steel construction, corrosion won't be a concern with these trolleys. Plus, the wheels are machined for smooth, quiet operation. The trolley body extends past the wheels to protect them from damage. The included spacing washers can be added and removed to fit the beam flange width. Use trolleys on tapered and wide (flat) flange beams.

Cap., lbs.	Fits Beam Flange Wd.	Min. Beam Ht.	(A)	Min. Curve Radius	Wheel Tread Dia.	Hanger Hole Dia.		
1,000	2 5/8″-5″	4″	4 5/8″	60″	2 7/8″	1 3/4″	3289T11	$2,860.14

4,000	3 3/8″-6″	6″	6″	90″	4 1/2″	2″	3289T13	4,635.01

Quick-Mount Low-Height Manual Trolleys

- Steel wheels
- Maintenance-free ball bearings
- Steel body

For quick installation, these CM 632 trolleys have an adjusting collar that adjusts to the beam flange width. Plus, a unique, angled design and a V-shaped hexagon crossbar take up less vertical space so your hoist hangs closer to the beam. Use trolleys on tapered and wide (flat) flange beams.

Cap., lbs.	Fits Beam Flange Wd.	Min. Beam Ht.	(A)	Min. Curve Radius	Wheel Tread Dia.	Crossbar Hex Size		
1,000	2 5/8″-5 1/16″	4″	1 13/16″	7″	2 3/4″	11/16″	3189T2	$146.26
2,000	2 5/8″-5 1/16″	4″	1 5/8″	7″	2 3/4″	7/8″	3189T3	178.86
4,000	3 3/8″-5 5/8″	6″	2″	10″	3 1/2″	1 1/8″	3189T5	292.51
6,000	4″ -6 1/4″	8″	2 5/8″	10″	3 1/2″	1 1/8″	3189T6	513.66

Easy-Adjust Manual Trolleys

- Steel wheels
- Maintenance-free ball bearings
- Steel body

Just turn the adjusting bar and the trolley opens and closes to fit the beam flange width. A locking collar on the adjusting bar prevents the trolley from coming loose after it is mounted to the beam. The trolley body has wraparound bumpers to protect the wheels and to prevent the load from dropping if a wheel axle fails. Use trolleys on tapered and wide (flat) flange beams with a maximum flange thickness of 1″.

Cap., lbs.	Fits Beam Flange Wd.	Min. Beam Ht.	(A) Min.	(A) Max.	Min. Curve Radius	Wheel Tread Dia.	Hanger Hole Dia.		
2,240	2 1/2″-8″	2 1/2″	8″	9 1/4″	57″	1 3/4″	3 1/2″	9469T15	$517.82
4,480	3″ -8″	2 1/2″	8″	9 1/4″	57″	2″	3 1/2″	9469T17	558.17

Hand-Chain-Driven Trolleys

- Cast iron wheels (unless noted)
- Maintenance-free ball bearings
- Steel body
- Zinc-plated steel chain

Simply pulling the hand chain drives the gears on these trolleys so they move smoothly and easily along the beam. The included spacing washers can be added and removed to fit the beam flange width. Use trolleys on tapered and wide (flat) flange beams (unless noted).

General purpose are the economical choice. The trolley body has wraparound bumpers to protect the wheels and to prevent the load from dropping if a wheel axle fails.

Heavy duty have a heavier gauge body for longer life. The body also extends past the wheels to protect them from damage.

Cap., lbs.	Fits Beam Flange Wd.	Min. Beam Ht.	(A)	Min. Curve Radius	Wheel Tread Dia.	Hand Chain Lg., ft.	Hanger Hole Dia.

■ Has steel wheels. Use on tapered flange beams only.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

For information about trolleys, see page 1469.

Motorized Trolleys

- Cast iron wheels
- Maintenance-free ball bearings
- Steel and cast iron body

Reduce user fatigue—these CM Railstar trolleys efficiently move your single-speed hoist along the beam at the touch of a button. Hardwire your hoist's power cord and control cord into the control box on the trolley and operate both the trolley and hoist from the included handheld push-button control. Control cord is 16′3″ long. *Note:* The trolley push-button control does not work with two-speed and variable-speed hoists.

Motor is totally enclosed; trolley speed is 78 fpm. The trolley body extends past the wheels to protect them from damage. The included spacing washers can be added and removed to fit the beam flange width. Use trolleys on tapered and wide (flat) flange beams.

To Order: Please specify voltage: 115 VAC, 60 Hz, single phase or 230/460 VAC, 60 Hz, three phase.

About Cable and Hose Travel Systems

Also known as festooning, cable and hose travel systems offer an organized way to keep the cables and hoses that power your hoists and other mobile equipment tangle free and out of the way.

Once installed, a series of small trolleys follow along a wire rope or channel, carrying your cables and hoses along with them.

Our systems include everything you need, except cable or hose, to install a new system or expand an existing one. For round cable, see page 809; for air hose, see pages 240-246; for flat cable, see page 1473.

Easy-Wire Cable and Hose Travel Systems

System with Four Trolleys for Round Cable and Hose (Hoist, Hoist Trolley, and Cable and Hose Are Not Included)

Simplify getting power to your hoist or workstation—these travel systems require minimal structural support and are easy to install. The lightweight wire rope makes them ideal for short-run applications such as along jib cranes and workstation bridge cranes.

The included trolleys snap together for installation anywhere along the included ¼″ dia. nylon-coated galvanized steel wire rope. The trolleys have a two-piece glass-reinforced nylon body and a zinc-plated cradle for supporting cable and hose. Capacity is 15 lbs. per trolley.

Each system also includes: one 18″ tow arm and one tow clamp that are needed only when not using a hoist trolley (hoist trolley is not included), two 18″ tension brackets, one end clamp, and an installation kit that contains the hardware for connecting the wire rope. Kit includes four galvanized steel wire rope clips, two wire rope thimbles, two eyebolts, four flat washers, two lock washers, four hex nuts, and two rubber stops. Tension bracket and tow arm are painted steel; clamps and hardware are made of zinc-plated steel.

Note: "Minimum cable/hose required" (listed below) is based on a 36″ loop depth between trolleys plus an additional 15 feet to allow for 7½-ft. hook-up at each end.

Cable and hose are sold separately. For round cable, see page 809; for air hose, see pages 240-246; for flat cable, see page 1473.

Heavy Duty Cable and Hose Travel Systems

Channel Dimensions

End Clamp for Round Cable

Trolley for Round Cable

Tow Trolley for Flat Cable

Ideal for high speed applications and for use on bridge cranes, these systems (also known as festoon kits) use 14-ga. steel channel so they are stronger and run straighter than wire rope systems. Join two or more systems for long-run applications. All have zinc-plated steel wheels with maintenance-free ball bearings. Capacity is 40 lbs. per trolley. *Trolleys for round cable and hose* have an eye/U-bolt combination with a cable clip; *trolleys for flat cable* have a galvanized steel saddle.

Each system also includes: galvanized steel joint brackets, galvanized steel hanger brackets, one galvanized steel anchor bracket, one galvanized steel and plastic end clamp, one galvanized steel and aluminum tow trolley, and two galvanized steel end stops.

"Minimum cable/hose required" (listed below) is based on a 36″ loop depth between trolleys plus an additional 15 feet to allow for 7½-ft. hookup at each end.

Cable and hose are sold separately. For round cable, see page 809; for air hose, see pages 240-246; for flat cable, see page 1473.

Trolleys for Cable and Hose Travel Systems

1

For Flat Cable

2

For Round Cable

3

4

5

6

Create your own cable and hose travel system (also known as festoon kits) with these trolleys. They can also be used for replacing trolleys in an existing system.

Trolleys for Wire Rope— Lightweight and easy to install. All have a wheel with a plain bore (no bearing) and a zinc-plated steel cable/hose clamp. *Style 1* mounts at the end of the rope. Body and wheel are nylon. *Style 2* have a two-part glass-reinforced nylon body so they can be mounted anywhere along the wire rope; wheel is acetal.

Trolleys for Channel— Designed for use with heavy duty travel systems. They have a galvanized steel body, zinc-plated steel wheels with maintenance-free ball bearings, and a plastic cable/hose clip.

Trolleys for I-Beam— Are two-piece so they can be mounted anywhere along an I-beam. *Style 4* adjusts to the I-beam width. Has a plain steel body, nylon wheels with maintenance-free precision ball bearings, and a steel cable/hose clamp. Use on tapered flange I-beams. *Style 5* adjusts to the I-beam width. Has an aluminum body, nylon wheels with plain bore (no bearing), and an aluminum cable/hose cradle. Use on tapered and wide (flat) flange I-beams. *Style 6* have a steel body with a yellow powder-coated finish, polyurethane wheels with maintenance-free ball bearings, and an aluminum cable/hose cradle. Use on tapered flange I-beams.

For Wire Rope

	For Cable and Hose	Fits Wire Rope Dia.	Cap., lbs.

6	Flat	3⅜″	175	3301T24	492.78

Warning! **Never exceed capacities. Never use to life people or items over people.**

Flat Electrical Cable and Connectors

Use with new and existing cable and hose travel systems for indoor and outdoor applications. Cable is rated 600 VAC. See pages 1471-1472 for cable and hose travel systems. For information on AWG specifications, see page 758.

Cable— Has a yellow PVC jacket and resists oil and UV. Temp. range is –31° to +221° F. UL listed and CSA certified.

Connectors— Provide a secure connection between a single cable and junction box. Mounting nut and sealing gasket are included.

Bridge Crane End Trucks

End trucks connect a bridge beam (not included) to the runway beams (not included) of your bridge crane. Two end trucks are required (one for each runway beam). They can be mounted anywhere along the runway beams. All are made of steel.

Top/bottom flange mount allow you to run the bridge beam along either the top or bottom flange of the runway beams. Trucks have cast iron wheels with maintenance-free precision ball bearings. Extended end plates prevent the end trucks from dropping if a wheel axle fails. Use on tapered and wide (flat) flange runway beams. Hardware for connecting the end trucks to the bridge beam is included. Installation requires drilling mounting holes in the flange of the bridge beam.

Bottom flange mount are used on the bottom flange of tapered flange runway beams. Trucks have steel wheels with maintenance-free ball bearings. Wraparound bumpers prevent end trucks from dropping if a wheel axle fails. Installation hardware is included. Trucks slide onto the end of the beam so no drilling is required.

Steel and Aluminum Gantries

Gantries provide a structural I-beam for handling lifting jobs around your facility. Four swivel casters provide mobility. Conform to OSHA and CMAA (Crane Manufacturers Association of America) standards. Shipped unassembled.

Fixed— Made of steel. Casters have polyurethane wheels with roller bearings.

Adjustable— The height (A) and width (B) adjust to accommodate different lifts and to make it easier to move the unit through doorways.

Steel have a yellow-painted finish and can handle higher capacities. Height adjusts in 1-ft. increments and the legs pivot for maneuverability in tight places (unless noted). Casters have steel wheels with roller bearings (unless noted).

Aluminum are lighter in weight for easier movement. Height adjusts in 6″ increments. Casters have mold-on polyurethane wheels with roller bearings and four-position swivel locks.

★ Has phenolic swivel casters with roller bearings. Legs do not pivot.

Warning! ***Never exceed capacities. Never use to lift people or items over people.***

Easy-Store Gantries

With Glass-Filled Nylon Wheels

Locking pin connections allow these gantries to be easily disassembled after use for convenient transport and storage. Plus, the height (A) and width (B) are adjustable. Height adjusts in 6″ increments. All are made of corrosion-resistant aluminum so the I-beam is lightweight and can be adjusted without a hoist or fork truck. All have swivel casters with a four-position swivel lock. Meet ANSI/ASME B30.20 and Crane Manufacturers Association of America (CMAA) standards.

The *1,500-lb. capacity* units have pneumatic wheels with maintenance-free ball bearings; *2,000-* and *4,000-lb. capacity* units have glass-filled nylon wheels with needle roller bearings.

Floor-Mount Workstation Cranes with Cable Travel System

No need to create a special foundation—cranes can be mounted to a minimum 6″ deep reinforced-concrete floor using Grade 5 anchors (see 98880A on pages 3314-3315) with an epoxy anchoring system (see page 3313). The cranes consist of two runway beams supported by four uprights and a bridge beam with a trolley supported on end trucks that travel along the runways. Each upright has four 13/16″ dia. mounting holes. Trolley has a crossbar for hanging your hoist; trolley height is 12 ft. To keep your cable organized and to provide power to your lifting device, a complete cable travel system with 14-gauge/4-conductor flat cable and plastic cradles to support and move cable along is also included. Cranes are designed so the load can reach any point within the workstation. The runway beams and uprights are steel with a gray baked-enamel finish; bridge beam is steel with a yellow baked-enamel finish. All beams are enclosed track-style, which keeps dirt and dust out of the rolling surface, prolonging the life of the trolley wheels. Trolley wheels are polyamide with maintenance-free ball bearings.

Modular Workstation Cranes

Shown as a Workstation Crane Using Three Rail Kits and Four Support Posts

Build your own monorail crane or workstation crane using these bolt-together components. Combine one rail kit with two support posts for a monorail crane or three rail kits with four support posts for a bridge crane. Rail kits and support posts are sold separately. All components are made of steel with an orange powder-coated finish. Capacity is 1,000 lbs.

Rail Kits—Two rails bolt together to create one enclosed track-style runway for the included trolley. Trolley has nylon wheels with maintenance-free bearings and a hanger for holding your lifting device. Kits also include end caps, rubber stops, and adjustable mounting bolts to keep the runways level. All installation hardware is included. ***Connection brackets*** (sold separately) join runway sections together to extend the length of the runway.

Support Posts—Have a 10″×10″ mounting plate with four 5/8″ mounting holes. Mount to the floor using 5/8″-11×5″ Grade 5 bolts (sold separately).

Light Duty Floor-Mount Rotating Jib Cranes

Also known as enclosed track jib cranes, the boom on these cranes rotates 360° for maximum versatility. Cranes mount to a minimum 6″ deep reinforced-concrete floor using Grade 5 anchors (see 98880A on pages 3314-3315) with an epoxy anchoring system (see page 3313).

Cranes are made of steel with a blue baked-enamel finish. Mast has four 1″ dia. mounting holes. The enclosed track-style boom includes a trolley that has plastic wheels with maintenance-free ball bearings and a 1/2″ dia. crossbar for hanging your lifting device.

Heavy Duty Foundation-Mount Rotating Jib Cranes

Mounting these cranes requires anchor bolts (sold separately) set in a new, reinforced-concrete foundation, which results in much higher capacities than our floor-mount rotating jib cranes.

Cranes consist of a mast, head assembly, and wide (flat) flange beam made of steel with a yellow-painted finish. The beam rotates 360° for versatility and accommodates most trolleys. A base plate pattern to use as a template for properly setting anchor bolts into the foundation is included.

Also Available: Other capacities up to 10,000 lbs.; other spans up to 20 ft.; and other under-beam clearances (dimension A) up to 20 ft. Please ask for 3244T999 and specify capacity, span, and under-beam clearance (dimension A).

Anchor bolts are L-shaped steel and include leveling nuts and securing nuts with washers to hold the mast's base plate.

Structural Column-Mount Rotating Jib Cranes

Mount these cranes to a load-bearing structural column in your facility using 12 Grade A325 bolts (not included, see 91571A on page 3159) to minimize obstructions and save floor space. Cranes are steel with a yellow-painted finish. All have a wide (flat) flange beam that rotates for versatility and accommodates many trolleys. End stops on the beam limit trolley travel. Beams, brackets, and connecting hardware are included. See page 1476 for replacement brackets and tie rods.

Note: Structural columns to which cranes are to be attached must support the thrust and pull forces of the crane under load. Be sure to evaluate the structural integrity and height of the column as well as how the column is supported at the base and at the top.

Top-Support Cranes

The economical choice with good thrust/pull force support. The beam is supported by a 1″ dia. steel tie rod (1½″ dia. for 4,000-lb. capacity) and rotates 200°.

Also Available: Other spans up to 30 ft. and capacities up to 10,000 lbs. Please ask for 3245T999 and specify span and capacity.

Bracket Sets for Structural Column-Mount Rotating Jib Cranes

Add these brackets to tapered or wide (flat) flange beams (not included) and build a rotating jib crane as well as replace damaged and worn brackets on an existing crane. Brackets are steel with a gray primer finish. Hardware for attaching brackets to the beam and the beam to the structural column is not included. Use Grade A325 bolts (see 91571A on page 3159).

Also Available: Brackets and tie rods for higher capacities. For top-support brackets, please ask for 3395T888 and specify capacity; for tie rods, please ask for 3395T777 and specify capacity and span; and for 4,000-lb. capacity cantilever brackets, please ask for 3390T12.

Mounting Bracket Dimensions								
Style	(A)	(B)	(C)	(D)	(E)	(F)	(G)	(H)
1	6½″	5″	1½″	—	3½″	11/16″	—	—
2	4½″	—	2¼″	—	2¼″	11/16″	7⅛″	—
3	4″	6″	2″	—	2″	9/16″	—	2½″
4	8½″	5″	2″	2¼″	2¾″	11/16″	—	—

For Top-Support Cranes

***Brackets*—**Use with 500- to 2,000-lb. capacity cranes. Set includes one Style 1 bracket attached to a Style 2 bracket by a hinge-style connection for mounting the beam to the structural column; one Style 1 bracket with a connection to attach the tie rod to the structural column; and one Style 3 bracket that mounts the tie rod to the beam.

3395T11 ..... **Set** $471.91

***Tie Rods*—**Use with 500- to 2,000-lb. capacity cranes. They are 1″ dia. steel and are offered for a variety of beam spans. Two nuts are included to secure the threaded ends of the tie rod to the brackets.

For Span		Each
8 ft.	3395T14	$195.56
10 ft.	3395T17	204.44
12 ft.	3395T21	213.33
14 ft.	3395T24	216.28
20 ft.	3395T27	235.56

For Cantilever Cranes

***Brackets*—**Use with 500- to 2,000-lb. capacity cranes. They include two Style 1 brackets, each attached to a Style 4 bracket with a hinge-style connection, for mounting the beam to a structural column.

3390T11 ..... **Set** $367.45

Mobile Hydraulic Cranes

With a telescoping boom to do the lifting and casters for mobility, these cranes handle a variety of lifting jobs. A hydraulic pump raises and lowers the boom. *Note:* Capacity decreases as boom length increases.

All cranes are made of steel and have a forged steel swivel load hook with latch. A single- or dual-action pump moves the boom. Single-action pumps move the boom on the down stroke; dual-action pumps move the boom on the up and down stroke for increased efficiency.

(1) Economy*—**Inexpensive yet versatile. Leg height is 7″; clearance between legs is 25″ to 34″ (unless noted). Units have a dual-action pump and four swivel casters with steel wheels. The boom includes an 11½″ long adjustable chain with load hook. Hook opening is 1″. Units exceed ANSI/ASME-PALD-12 (Portable Automotive Lifting Devices). ***Economy unit has adjustable-length front and rear legs. ***Fold away*** unit allows the legs and boom to fold up for convenient storage and transport. Clearance between legs is 16½″ to 31½″.

***(2) Premium*—**The load hook is mounted to the boom and has a 1″ opening. Units have two swivel casters and two wheels. Meet ANSI Z535 and ASME-PALD-12 (Portable Automotive Lifting Devices).

1,000-lb. capacity unit has a single-action pump and nonmarking phenolic wheels. Leg height is 6″; clearance between legs is 28″.

2,000-lb. capacity unit has a dual-action pump and nonmarking phenolic wheels. Leg height is 6½″; clearance between legs is 24½″.

3,000-lb. capacity unit has a dual-action pump and cast iron wheels. Leg height is 8″; clearance between legs is 24½″.

***(3) Premium Fold Away*—**Folds for storage and transport. Also offers adjustable-width legs. Leg height is 8″; clearance between legs is 24″ to 48″. Unit has a dual-action pump and nonmarking phenolic wheels. When the legs are folded, the crane rests on three wheels; when unfolded, the crane rests on one rigid caster, one swivel caster, and two wheels. The boom includes a 16⅞″ long chain with grab hook for shortening chain and a forged steel swivel load hook. Load hook has a 1¼″ opening; grab hook has a ½″ opening.

***(4) Premium Reverse Boom*—**Counterweighted with no legs in front, so they don't interfere with the load. The load hook has a 1″ opening. All have a dual-action pump except 3255T51, which has a single-action pump. Units have two swivel casters and two wheels. Wheels are phenolic except for 3255T55, which are cast iron. Units exceed ANSI Z535 and ASME-PALD-12 (Portable Automotive Lifting Devices) requirements.

Repair kits contain hydraulic components subject to wear such as O-rings, gaskets, and seals.

Hand Winch Cranes

Single-Length Boom Crane with Optional Pedestal Base

Telescoping Boom Crane with Optional Pedestal Base

Telescoping Boom Crane with Optional Dock-Mount Base

Telescoping Boom Crane with Optional Mobile Base

Create a custom hand winch crane—simply choose the crane and mounting base (both sold separately) that suit your needs.

Cranes

Cranes consist of a mast, a single-length or telescoping boom, and a hand-operated winch. The winch has an automatic brake that holds your load securely when the handle is released. Powder-coated and galvanized units have galvanized wire rope with a forged steel swivel hook with latch; stainless steel units have stainless steel wire rope with a stainless steel hook with latch. All hooks have a 11/16″ opening. Cranes rotate 360° and are labeled with capacity for each boom position.

Light Duty Permanent Magnets

Remove metal parts and debris from tanks, retrieve metal objects from hard-to-reach places, and move ferrous metal material with these small, manual-release magnets.

Magnet with handle has a plastic housing, rubber grip handle, and two slide-on shields to cover the magnet when not in use. Capacity is based on 1/4″ material thickness. Max. operating temp. is 180° F.

Magnets with lifting eye have a painted steel housing and a zinc-plated steel lifting eye for attaching a hook or sling. Capacity is based on 1/2″ material thickness. Max. operating temp. is 400° F.

Permanent Lifting Magnets

For use in a broad range of applications, these versatile magnets have a maximum operating temperature of 266° F and a large lifting bracket that accepts a wide variety of hooks and slings. All are lightweight and have a cam-style release. Housing and lifting bracket are Type 304 stainless steel. Use for lifting flat steel that has a clean, smooth surface.

Nonmarring Permanent Lifting Magnets

Specially designed with a nonmarring roller cam, these magnets require less torque to release your load, without scraping or gouging. Jackscrew can also be tightened to release the load or adjust magnet placement. Housing is Type 304 stainless steel and has a forged-steel lifting eye for attaching hooks and slings. Maximum operating temperature is 300° F. Use for lifting flat steel that has a clean, smooth surface.

Electric Lifting Magnet

A powerful magnetic field on this circular magnet can lift flat steel that has a clean, smooth surface. Operates on 110 VAC, 60 Hz and can run continuously. Housing and lifting eye are steel. Maximum operating temperature is 165° F. Magnet includes a 3-ft. power cord without plug (see pages 784-789 for plugs).

Overall Size, Dia. × Ht.	Amps	Lifting Eye ID		
4″ × 4 3/4″	0.4	1″	3693T11	$398.74

Permanent Lifting Magnets with On/Off Control

Small but powerful, these rare-earth magnets have an on/off handle that engages the magnet only when you need it. The handle locks in both the "on" and "off" positions to prevent accidental release. Housing and lifting eye are steel. Maximum operating temperature is 180° F. Use for lifting flat and round steel that has a clean, smooth surface.

Note: Capacities listed are for flat items. Capacities are reduced by 50% when lifting round items.

Battery-Powered Lifting Magnets

Use them anywhere—these magnets have a self-contained, automotive-style 12-volt battery that creates a magnetic force without an electrical power source. All have a recessed on/off switch and a safe-charge indicator. Housing and lifting bracket are steel. Magnets include a 12-volt charger with 9-ft. cord and three-prong plug for charging from any 115 VAC outlet. Maximum operating temperature is 140° F. Use for lifting flat steel that has a clean, smooth surface.

Note: Capacities are based on SAE 1020 steel. Using other materials may reduce capacity.

Long-Reach Magnetic Retrievers

The extra length you need to go after iron and steel items in hard-to-reach places.

1 Has a disc-style neodymium magnet, which is offset 45° from the 36″ long tubular steel handle. The magnet housing is nickel-chrome plated. Handle has a vinyl grip.

2 Has a horseshoe-style ceramic magnet and a 38½″ long, two-piece straight steel handle that can be unscrewed for a shorter 20⅝″ overall length.

3 Made of Type 303 stainless steel, these retrievers have a 1″ dia. rotary-style Alnico magnet, which is encased in a 1⅛″ dia. tube. Slide the included neoprene ring across the tube to remove material. The handle is straight, 48″ long, and has a neoprene grip. Base has two 2⅝″ dia. neoprene wheels.

4 Have a flat-style Alnico magnet and a 48″ long straight wood handle. They also have a ball-joint base, which lets you pivot the magnet back and forth. Magnet is protected by a removable steel cover plate.

Hand-Held Retrieving and Holding Magnets

Easily grab iron and steel parts buried in bins, boxes, and kegs.

5&6 These ceramic magnets have a fingertip release bar to release materials. All have a sturdy plastic housing, unless otherwise stated.

Style 6—Models 5839A21, A23, A14, and A15 have a Type 304 stainless steel housing that's for use with hot and abrasive materials. **Also Available:** Stainless steel housings for 5839A11, A31, A12, A32, A13, and A33, plus plastic housings and springs for Style 6 models. Please ask for 5839A84 and specify housing material and magnet part number.

7 These slightly recessed round ceramic magnets have a plastic housing and a release bar to release materials.

8 Recommended for ⅜″ thick or greater steel plate or block, this ceramic magnet has an aluminum housing and a release lever to release materials.

9 These ceramic magnets are recommended for horizontally pulling ⅛″ thick or greater steel sheets (except for 7421A32, which is for ¼″ thick or greater steel plate or block), dies, and assemblies. To release material, simply push the handle completely forward. Magnet base is 1⅛″-1 7/16″ thick. Housing and handle are aluminum. **Also Available:** Replacement handles and handle springs. For handles, please ask for 7421A55; for springs, please ask for 7421A58.

10 These tools have a rare earth magnet. They also have a safety disc that protects your hand by keeping materials from creeping up the body. Pull the slide-action bar to quickly release materials. Housing is Type 304 stainless steel.

11 Magnet is ceramic with a Type 304 stainless steel handle; housing is steel. No release mechanism—remove material manually.

12&13 Also known as blueprint holders, these ceramic magnets require you to remove your material manually. Housing is steel.

14 Material must be removed manually from these Alnico magnets. Housing is hexagon-shaped aluminum with a rounded end and key chain.

Magnetic Sheet Metal Separators

Separate regularly and irregularly shaped steel sheets without scratching or bending the metal. These self-contained Type 304 stainless steel separators have ceramic magnets, which allow your stacked sheets to fan out. When you remove the top sheet, the next sheet automatically pops into position. Each has two ⅛″ thick, nonmagnetic 300 series stainless steel skid bars on the magnet plate to reduce friction drag. Maximum temperature is 400° F.

Style	Maximum Stack Ht.	Overall Size, Lg. × Wd. × Ht.		
A	12″	5½″ × 8¼″ × 13″	5864K28	$474.21

How to Select a Separator—Using the chart below, locate the sheet width and thickness you're working with to determine the separator style and how many individual separators you'll need. *Note:* Chart is approximate. You may need to add more separators.

	Sheet Thickness			
Sheet Width	**¼″ Style (Qty.)**	**7-10 ga. Style (Qty.)**	**12-18 ga. Style (Qty.)**	**20-26 ga. Style (Qty.)**
6″	A (1)	A (1)	B (2)	C (2)
12″	A (2)	A (2)	B (1)	C (1)
18″-24″	A (4)	A (2)	B (2)	C (2)
36″-48″	A (4)	A (3)	B (2)	C (2)

Warning! ***"Approx. Pull, lbs." ratings are based on ideal conditions. Variations in iron content, thickness, and surface finish and condition will all reduce these ratings. Do not use for lifting over people.***

Suction-Cup Lifters

All of these lifters can be used on flat as well as curved surfaces that are smooth and nonporous, unless otherwise stated. They have black rubber cups, unless noted. Maximum temperature is 200° F, unless otherwise stated.

(A-C) Small Suction-Cup Lifters—Perfectly sized for light jobs.
Style A—Have one, two, or four finger rings. Break the suction by pressing one of the tabs on the cup.
Style B—Break the suction by lifting the lipped edge.
Style C—Break the suction with the push-button release valve.

★ Black vinyl; use on flat, nonporous surfaces; max. temp. is 125° F.
● Red silicone; max. temp. is 450° F.

(D-K) Pump-Style Suction-Cup Lifters—A few quick strokes on the built-in pump create a strong vacuum. For added safety, a red ring indicator on the pump lets you know when you have insufficient vacuum. Use the lift tabs (except for *Styles J* and *K*, which have a release valve) to break the suction. Handles are metal (unless noted). Max. temp. is 120° F.
Style D—*Model* 53615A15 is for use on flat surfaces.
Style H—Has a pivoting tie down ring instead of a handle. Secure suction cup to surface and then attach a rope, chain, or cord to the ring.
Styles J&K—For use on flat surfaces. Furnished in a plastic case.
Also Available: Replacement cups. Please ask for 53615A41 and specify McMaster-Carr suction-cup lifter part number.

Heavy Duty Suction-Cup Lifters

Single Cup

Double Cup

Grab and move bulky items with these lifters. All have cast aluminum handles and are for use on flat and curved smooth surfaces. ***Single-cup lifters*** have a 6″ wide handle and finger-pull suction release. ***Double-cup lifters*** have a 10″ wide handle (unless noted) and a pull-up suction-release bar. Their cups are 6″ center-to-center, unless noted. ***Long-reach double-cup lifters*** have a 32″ vertical handle with a finger-pull suction release. Their cups are 6″ center-to-center. ***Replacement cups*** include a ⅝″-18 male fitting. ***Lifter holder*** is orange plastic and mounts to a wall (fasteners included) for quick lifter access. Size is 14″ Ht.×9″ Wd. **Also Available:** Replacement air flow valves for suction cups. Please ask for 5717A5.

Rubber Suction Cups

With Male Thread

Great as nonslip feet for office machines and other items. All have a molded-in machine screw with male threads (except for 53535A33, which has an untapped hole). All are made of black rubber (except for 53535A45, which is gray). Maximum temperature is 200° F.

Warning! Never exceed capacities. Never use to lift people or items over people.

About Plate-Lifting Clamps

- Lift one plate at a time.
- Plate surface must be clean and free from oil.
- Insert plate into full clamping depth (dimension A) before lifting.
- Plate thickness should be within the range listed.
- Attach the clamp to a sling, not a hoist hook, to achieve a more vertical lift.
- Clamps should be lifted vertically. The maximum angle out of vertical should not exceed 10° (unless noted).

Vertical lifts raise the plate straight up from its original vertical position. No turning is involved.

Horizontal lifts, using two or more clamps, pick up the plate from its horizontal position. No turning is involved.

90° lifts begin with a horizontal plate and turn it so that it is vertical.

180° lifts take a plate from horizontal to vertical to horizontal through a 180° arc.

Grip-Tight Plate-Lifting Clamps

Lift metal plates safely—as the load increases so does the grip of these clamps. All clamps are made of steel.

Spring-Loaded Clamps with Wear-Indicating Teeth

Spring-loaded clamps release only when not under load and the lifting eye has been pressed in. The teeth on the cams visibly flatten to indicate wear so you know the cams need replacing. Use with plates that have a hardness less than Rockwell C43/400 Brinell. No minimum load is required for operation.

Also Available: Repair kits. Please ask for 8857T87 and specify McMaster-Carr part number and lifting eye or cam/pad kit required.

(1) Standard—The economical and reliable choice to get the job done.

(2) Standard with Slings—Same as Style 1, but have two clamps with slings for two gripping points that better stabilize larger plates. 8857T21 has 34″ long slings; 8857T22 has 43″ long slings.

(3) Short Leg—A shallow throat allows a secure bite on small and odd-shaped pieces. Ideal for I-beams.

(4) Sharp Leg—One long, pointed leg gets in between stacked plates to engage the clamp.

Work Load Limit, lbs.	For Plate Thickness	(A)	(B)	(C)	(D)	Lifting Eye Opening, Wd. × Ht.

♦ The work load limit is for each leg of the two-part sling.

Lock-Open/Lock-Closed Clamps

The cams on these clamps lock in the open position for easy loading and then, for added safety over spring-loaded clamps, lock closed to prevent accidental release. A minimum load of 10% of the work load limit is required for operation (unless noted).

Also Available: Replacement parts for 8845T and 3352T. Please ask for 8845T77 or 3352T888 and specify McMaster-Carr part number and part required.

Also Available: Repair kits for 8857T. Please ask for 8857T87 and specify McMaster-Carr part number and lifting eye or cam/pad kit required.

(5&6) Compact—The smallest clamps we offer, yet with work load limits comparable to larger clamps. Use on plates with hardness less than Rockwell C37/345 Brinell. ***Style 6*** has a pivoting lifting eye that allows lifts at angles up to 45°.

(7) Wear Indicating—The teeth on the cams visibly flatten to indicate wear so you know the cam needs replacing. Use with plates that have a hardness less than Rockwell C43/400 Brinell. No minimum load is required for operation.

(8) Super Tough—These clamps have heavy-gauge construction and a larger grip range. Plus, all components of the clamp are enclosed in the frame for protection. Also, the locking lever has a hole for attaching a remote release line. Use with plates that have a hardness less than Rockwell C45/420 Brinell. ***4,000-*** and ***8,000-lb***. units have two parallel cams for extra grip surface.

(9&10) Remote Release—A pull chain with ring allows the operator to release the clamp when not under load while standing away from the lifting site. ***Style 9*** is for use with plates that have a hardness less than Rockwell C33/300 Brinell. A minimum load of 50% of the work load limit is required for operation. ***Style 10*** also has teeth on the cams that visibly flatten to indicate wear so you know the cam needs replacing. Use with plates that have a hardness less than Rockwell C43/400 Brinell. No minimum load is required for operation.

Warning! **Never exceed work load limits. Never use to lift people or items over people.**

For information about plate-lifting clamps, see page 1481.

Light Duty Plate-Lifting Clamps

Lifting Eye

Tension on the cams increases as you lift. Use only for vertical lifting of metal plates with a hardness less than Rockwell C43/400 Brinell. Clamps are made of steel. The ***T-handle*** design is for carrying and pulling. Handle is 4″ wide. The ***lifting eye*** is for use in overhead conveying applications. Eye is 1¼″ Wd. × 1½″ Ht.

Work Load Limit, lbs.	Plate Thickness	(A)	(B)	(C)	(D)		
With T-Handle							
500	0″-5/16″	1⅞″	1⅝″	6″	3¾″	**3359T14**	$195.61
With Lifting Eye							
500	0″-5/16″	1⅞″	1⅝″	8″	3¾″	**3359T15**	223.28

Nonmarring Plate-Lifting Clamps

Lock Open/
Lock Closed

Thick Plate

Super-gripping nonmetallic pads on the cams increase their grip as you lift, yet securely handle delicate material without damage. Clamps are made of steel with a painted finish.

Lock-Open/Lock-Closed Clamps— Cams lock open for easy loading, and then lock shut to prevent accidental release. Cams have synthetic pads.

Thick Plate Clamps— Fit the broadest range of plate thicknesses of any clamp we offer. The cams lock open and then spring closed. Cams have rubber pads. Use only for vertical lifts. *Note:* Do not use with glass.

Work Load Limit, lbs.	For Plate Thickness	(A)	(B)	(C)	(D)	Lifting Eye ID	
Lock-Open/Lock-Closed Clamps—*For Vertical and 180° Lifts*							
1,100	0″ - ⅜″	3 5/16″	2 15/16″	9 5/16″	5″	1 9/16″	**8804T51** $612.27

2,200	1 3/16″-3″	10″	⅞″	15⅝″	7½″	1″	**8804T56** 534.52

Horizontal Plate-Lifting Clamps

Lift-to-Grip

Lock Open/
Lock Closed

Use one or more pairs of these clamps to lift and transfer plates in a horizontal position. Clamps are made of heat-treated steel. Use for lifting metal plates with a hardness less than Rockwell C45/421 Brinell. Minimum lift capacity is 5% of the work load limit.

Lift-to-grip clamps require tension from an attached sling (not included) to firmly grasp the plate.

Lock-open/lock-closed clamps have cams that lock open for easy loading, and then lock shut to prevent accidental release.

Work Load Limit, lbs. (Per Pair)	For Plate Thick.	(A)	(B)	(C)	(D)	Lifting Eye ID	Pair
Lift-to-Grip Clamps							
1,000	0″-1″	4″	⅜″	6¼″	4½″	1½″	**8955T2** $228.03
2,000	0″-2″	5″	½″	10⅛″	6″	1½″	**8955T3** 361.93
3,000	0″-2″	5″	½″	10⅛″	6″	1½″	**8955T4** 432.44
6,000	0″-2″	5″	⅝″	10¼″	6½″	1½″	**8955T5** 478.07
16,000	0″-3″	6½″	1″	14″	8″	2⅜″	**8955T6** 852.26
Lock-Open/Lock-Closed Clamps							
4,000	0″-1″	5½″	½″	11⅞″	4″	2¼″	**8955T81** 665.26
8,000	0″-1½″	6½″	⅝″	14⅞″	5″	3″	**8955T82** 879.85
12,000	0″-1½″	6½″	¾″	15″	5″	3″	**8955T83** 1,030.07
16,000	0″-2″	7¼″	1″	19½″	6⅛″	3½″	**8955T84** 1,394.89

Heavy Duty Screw Plate-Lifting Clamps

For long life and reliability in demanding applications, these clamps are made of heat-treated steel and have only one moving part. A specially designed clamping screw bites into material for a secure hold. Use only for vertical lifts of metal plates with a hardness less than Rockwell C32/300 Brinell.

Note: Do not use on hardened alloy or abrasion-resistant plates.

Work Load Limit, lbs.	For Plate Thick.	(A)	(B)	(C)	(D)	Lifting Eye Opening, Wd. × Ht.		
5,000	0″-1″	4½″	2¼″	14½″	5½″	2½″ × 6″	**3357T1**	$404.78
5,000	0″-1½″	4½″	2½″	14½″	6½″	2½″ × 6″	**3357T2**	476.79
5,000	0″-2″	4½″	2¾″	14½″	7½″	2½″ × 6″	**3357T3**	564.64

Pivoting Cam Plate-Lifting Clamps

The pivoting serrated cam on these clamps can be quickly tightened by hand and increases its grip as the load increases. Clamps are made of carbon steel and are for horizontal, vertical, and 180° lifts of metal plates with a hardness less than Rockwell C43/400 Brinell. Meet ANSI/ASME B.30.20 specifications.

Work Load Limit, lbs.	For Plate Thick.	(A)	(B)	(C)	(D)	Lifting Eye Opening, Wd. × Ht.		
2,200	1/16″-1″	2¼″	1½″	7¾″	5¼″	1¾″ × 2⅞″	**3700T11**	$432.64
6,600	1/16″-2″	3¾″	2⅜″	10½″	7¾″	1⅞″ × 3⅜″	**3700T12**	852.38
13,200	1/16″-3″	4½″	3″	14¼″	10″	3¼″ × 4½″	**3700T14**	1,687.78

Long-Arm Lifting Tongs

Also known as die-lifting tongs, these tongs have long arms for lifting tall objects and for reaching into machinery. When tension is applied to the lifting eye the grip increases. Tongs are made of alloy steel with a painted finish. Conform to ASME B.30.20.

Work Load Limit, lbs.	For Max. Object Size, Wd. × Thick.	Closed Size, Ht. × Wd.	Lifting Eye ID		
2,000	7″ × 20″	36″ × 9¾″	4″	**22735T31**	$599.89
2,500	9½″ × 28″	47″ × 12½″	5″	**22735T32**	867.43
3,000	10¾″ × 38″	57″ × 13¾″	6″	**22735T33**	997.83

Beam Tongs

Apply tension to the lifting eye and the scissor-action grip of these tongs firmly grabs tapered and wide (flat) flange I-beams. Tongs are made of steel.

3367T1 has a hold-open latch for easy loading and releasing.

Work Load Limit, lbs.	For Max. Flange, Wd. × Thick.	Closed Size, Ht. × Wd.	Lifting Eye ID		
2,000	10″ × 1″	26″ × 8″	4″	**3367T1**	$446.79
3,000	5″ × 5/8″	15″ × 6½″	4″	**3367T6**	324.64
6,000	8″ × 1″	19″ × 10″	4″	**3367T3**	592.50

Warning! ***Never exceed work load limits. Never use to lift people or items over people.***

Coil Lifting Hooks

Quickly and easily lift and move bulky, hard-to-maneuver coils from a horizontal to a vertical position. A unique wedge-style end on these hooks pivots forward so it can be inserted between stacked coils that are separated by spacer blocks. Hooks are made of steel with a painted finish. Meet ANSI/ASME B30.20.

Note: Never use for vertical-to-horizontal movement.

Work Load Limit, lbs.	(A)	(B)	(C)	Coil Size Max. Wd. (D)	Max. Radius (E)	Min. ID		
1,000	2″	3 5/16″	3 1/2″	6″	13″	9″	3595T14	$431.19
2,000	2″	3 5/16″	3 1/2″	8″	16″	10″	3595T17	586.27
4,000	2 5/8″	4″	2″	10″	18″	12 1/2″	3595T18	893.35

Industrial Battery Lifters

To prevent shock, the beam on these lifters is made of nonconductive, 2″×6″ laminated maple wood. The lifting eye and hooks are made of black powder-coated steel. Hooks adjust in 3″ increments on each side of the beam to accommodate various battery lengths. A unique plunger-style latch locks the hooks into place to ensure safe battery transport. Beam is marked with the work load limit.

Forklift attachment is ideal for lifting heavy batteries. It has 1 5/8″×6 1/2″ fork openings spaced 11 1/2″ center-to-center. Includes a 48″ safety chain with hook to secure to the forklift carriage and a powder-coated steel swivel hook with latch to attach to the lifter. Capacity is 6,000 lbs.

Work Load Limit, lbs.	For Battery Length	Spread	(A)	(B)	(J)		
4,000	21″-42″	24″-39″	2 1/2″	3″	15″	70605K65	$464.83
6,000	25″-46″	28″-43″	2 1/2″	3″	15″	70605K66	505.54
Forklift Attachment						70605K63	217.32

Pallet Lifters

Convert your crane or hoist into an aerial fork lift so you can access areas where it was impossible before. Lifters have built-in guiding handles and are counterbalanced to hang level when empty. Forks are fixed and tapered to slip effortlessly under pallets. Use for high-lift construction work, ship loading, unpaved storage areas, flat cars, open-top trucks, barges, and similar applications.

Lifters are steel with a yellow-painted finish, conform to ASME B30.20, and are marked with work load limit.

Work Load Limit, lbs.	(A)	(B)	(C)	(J)	(N)	(P)	(Q)	(R)	(S)	(T)		
2,000	3″	1″	5″	60 1/2″	48″	25″	21″	2″	2″	48″	3645T16	$1,394.13
4,000	3″	1″	5″	61 1/2″	48″	25″	17″	4″	2″	48″	3645T23	1,806.13
6,000	4″	1 1/2″	7″	65″	48″	27″	18″	4 1/2″	2 1/2″	48″	3645T26	2,513.78

Spreader Beams

Economy Beam with Load Shackles

Standard Beam with Load Hooks

Standard Beam with U-Style Load Bails

Beams are steel with a yellow-painted finish and are marked with work load limit. All meet ANSI/ASME B30.20.

Economy Beams with Load Shackles— Adjustable suspension and load shackles with screw pins let you redistribute weight when lifting unbalanced loads. Shackles are adjustable in the following increments: 3″ for the 250-lb. model, 4″ for the 500-lb. model, and 6″ for all others. Suspension and load shackles are forged steel with an orange-painted finish.

Standard Beams with Load Hooks— Spread adjusts via load hooks. Beams include a steel suspension plate with a yellow-painted finish and forged steel load hooks with a red-painted finish and latches.

Standard Beams with U-Style Load Bails— More versatile for lifting unbalanced loads than the economy models. Suspension and load bails adjust every 2″ for maximum precision. Suspension and load bails are steel with a black-painted finish.

Warning! **Never exceed work load limits. Never use to lift people or items over people.**

About Web, Mesh, and Wire Rope Slings

Web, mesh, and wire rope slings can be used in choker, vertical, and basket configurations (see drawings at left) to meet a variety of applications.

Web slings are ideal for lifting irregular-shaped loads and are an excellent alternative to chain and wire rope slings. They are light in weight and less likely to mar, scratch, or dent fragile loads. However, they are susceptible to cutting and abrasion, and therefore should not be exposed to sharp edges (see web sling protectors on page 1485). Sling capacity and stiffness increase with the number of plies. *One-ply* webbing is 1/8″ thick; *two-ply* webbing is 1/4″ thick; and *four-ply* webbing is 9/16″ thick. Higher capacity one- and two-ply slings are made from denser webbing and are stiffer than the same ply slings with lower capacities.

Wire mesh slings and ***chain mesh slings*** (see page 1487) withstand high temperatures and are cut resistant making them an excellent alternative to web slings.

Wire rope slings (see page 1487) are more cut and abrasion resistant than mesh slings.

ⓘ For additional information about web, mesh, and wire rope slings, including eye length and fitting dimensions, go to mcmaster.com and search for **8864TAC**.

Nylon and Polyester Web Slings

Choose from a variety of nylon and polyester slings to handle your general duty lifting applications. A sewn-on tag shows the material, length, and work load limits. Maximum temperature is 180° F. All meet OSHA standard 1910.184 and ANSI specification B30.9. ***Nylon*** slings stretch more than polyester slings to minimize shock to the load. ***Polyester*** slings resist most acids, plus they stretch less than nylon slings, which reduces load creeping.

Choker, Vertical, and Basket Slings

Flat Eye-and-Eye

Twisted Eye-and-Eye

Endless

All slings have a red warning core that shows when the jacket is worn and the sling should be removed from service.

Flat eye-and-eye slings, also known as Type 3, are very versatile and lay in a flat position for easier removal from beneath the load.

Twisted eye-and-eye slings, also known as Type 4, are similar to flat (Type 3) except the eyes are turned 90° to form a better choker. The ends also nest together for use in a single-hook basket configuration.

Endless slings, also known as Type 5, are the most universal general duty slings. The wear/load bearing point changes position every time the sling is used, which increases the life of the sling.

To Order: Please specify nylon or polyester. All slings are sold in lengths of 3, 6, 8, 10, and 12 ft., or any length you choose up to a maximum of 20 ft. Please specify length.

Extra-Wide Basket Slings

Standard Duty

Heavy Duty

Also known as cargo slings, these slings handle bulky loads in basket configurations only. The extra width balances the load and the tapered eyes easily fit into hooks. ***Standard duty*** slings have reversible eyes that can be folded inside out to allow both sides to wear equally. ***Heavy duty*** slings have reinforced eyes.

To Order: Please specify nylon or polyester. All slings are sold in lengths of 6, 8, 10, and 12 ft., or any length you choose up to a maximum of 20 ft. Please specify length.

24″	66,000	1	24″	8937T5	275.20	28.63

Warning! ***Never exceed work load limits. Never use to lift people or items over people.***

For information about web slings, see page 1484.

Wear-Resistant Web Slings

These tough slings offer better wear and abrasion resistance than our other nylon and polyester slings. All have a sewn-on tag that shows material, length, and work load limits. Maximum temperature is 194° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

Edge-guard slings have polymer-coated threads woven into the edges for wear resistance. Choose from *nylon slings* that stretch more than polyester slings to minimize shock to the load and *polyester slings* that are acid resistant and stretch less than nylon slings to reduce load creeping.

Super-edge slings are nylon with hard thermoplastic beading to protect the edge. Eyes are reinforced with ultra abrasion-resistant nylon for added wear protection.

Tough-web slings, also known as Cordura jacketed, have ultra abrasion-resistant nylon threads woven into the outer layers to protect the inner load-carrying yarns.

Premium super-web slings, also known as Cordura reinforced, are the most wear resistant slings we offer. Nylon with ultra abrasion-resistant nylon wear strips sewn on both sides of the body and eyes offers superior abrasion resistance.

Flat eye-and-eye slings, also known as Type 3, lay in a flat position for easier removal from beneath the load. ***Twisted eye-and-eye*** slings, also known as Type 4, are similar to flat (Type 3) except the eyes are turned 90° to form a better choker configuration and the ends nest together for use in a single-hook basket configuration. ***Reversible eye-and-eye*** slings, also known as Type 6, have reversible eyes that can be folded inside out to allow both sides to wear equally. ***Endless*** slings, also known as Type 5, allow the wear/load bearing point to change position every time the sling is used, which increases the life of the sling.

To Order: All slings are sold in lengths of 3, 6, 8, 10, and 12 ft., or any length you choose up to a maximum of 20 ft. Please specify length. For edge-guard slings, also specify nylon or polyester.

Web Sling Protectors

Reduce damage from cuts and abrasion—position a sling protector over areas prone to wear and increase the life of your slings.

Nylon hook and loop can be used even when fittings are installed on both ends of the slings.

Kevlar slip-on are the most cut-resistant sling protection we offer. *Note:* Slip-on sling protectors aren't designed for use on slings with fittings on both ends; choose hook and loop instead.

Warning! ***Never exceed work load limits. Never use to lift people or items over people.***

For information about web slings, see page 1484.

Polyester Round Slings

Eye-and-Eye

Cutaway View

Endless

For flexibility and a high strength-to-weight ratio, these slings consist of continuous-strand polyester fibers encased by two seamless layers of woven polyester, unless noted. The flexible internal fibers allow the sling to conform to the shape of the load. Slings resist sunlight, grease, and most acids. Stretch is 3% of length at the rated work load limits. Sewn-on tag shows material, length, and work load limits. Maximum temperature is 194° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

Eye-and-eye slings have an additional abrasion-resistant nylon cover over the body to improve wear resistance. ***Endless*** slings allow the wear points to be rotated for even wearing and longer life.

To Order: Sold in the minimum lengths shown as well as 3, 6, 8, 10, and 12 ft., or any length you choose up to a max. of 20 ft. Specify length.

Sling hooks with latch (sold separately) prevent rigging errors—just match the color and capacity of the hook to the compatible sling. Use in vertical configurations only.

Web Slings with Choker Fittings

General Purpose

Edge-Guard

Tough-Web

Quick Connect

Slip the end fitting on one end through the choker end fitting on the other end for use as a choker sling. Can also be used in vertical and basket configurations (unless noted). All slings have a sewn-on tag that shows material, length, and work load limits. Maximum temperature is 180° F. Meet OSHA standard 1910.184 and ANSI specification B30.9.

General purpose slings have a triangle fitting on one end and a choker triangle on the other end. Choose from *nylon slings* that stretch more than polyester slings to minimize shock to the load and *polyester slings* that are acid resistant and stretch less than nylon slings to reduce load creeping.

Edge-guard slings provide greater resistance to edge cutting and abrasion than general purpose slings. They are made of heavy duty polyester with polymer-coated threads woven into the edges with a web trap triangle fitting on one end and a web trap triangle choker on the other end. The web trap is specially designed to keep the web of the sling correctly positioned during use.

Tough-web slings, also known as Cordura jacketed, provide better wear resistance than edge-guard slings. They have ultra abrasion-resistant nylon threads woven into the outer layers to protect the inner load-carrying yarns. They have the same fittings on both ends, which allows either fitting to be threaded through the other to create a choker.

Quick-connect slings are made of heavy duty nylon with a quick-connect fitting on one end and a flat eye on the other end. The fitting easily interlocks with the body of the sling to form a choker and reduce rigging time. *Note:* Use in choker configurations only.

To Order: Sold in standard lengths of 3, 6, 8, 10, and 12 ft., or any length you choose up to a maximum of 20 ft. Please specify length. For general purpose slings, also specify nylon or polyester.

Warning! ***Never exceed work load limits. Never use to lift people or items over people.***

Wire Mesh and Chain Mesh Slings with Choker Fittings

Mesh slings resist cuts and abrasion, withstand temperatures up to 550°F, conform to irregular shapes, and maintain balanced loads. Mesh and end fittings are alloy steel. Use in choker, vertical, and basket configurations.

Wire mesh slings provide superior abrasion resistance and are zinc-plated for corrosion resistance. Serial number and work load limits are stamped on the fitting. ***Chain mesh*** slings are made of separate strands of chain woven with 1/8″ wire rope. They have a greater capacity for the same width as wire mesh style, plus they have bidirectional flexibility. End fittings have a green painted finish. Slings are tagged with the serial number and work load limits.

To Order: Sold in standard lengths of 3, 6, 8, 10, and 12 ft., or any length you choose up to a maximum of 20 ft. Please specify length.

Steel Wire Rope Slings

Rope slings provide better abrasion and cut resistance than web slings. Slings are tagged with work load limits. Meet both OSHA 1910.184 and ANSI B30.9 (unless noted). *Note:* When wire rope is bent to create a basket, the strength of the rope decreases. Therefore, basket values apply only when the diameter of the curve divided by the rope diameter (D/d ratio where D = dia. of curve; d = rope dia.) is 25 or greater for 6×19 mechanical-splice slings; 10 or greater for 7×7×7 cable-laid mechanical-splice slings; and 15 or greater for all hand-splice slings.

1

Mechanical-Splice Slings

The ends of the sling are secured with a pressed metal sleeve. All have a max. temp. of 400°F.

6×19 IWRC are made from a single wire rope—the most popular construction. ***6×19 IWRC braided*** slings consist of three wire ropes braided together—for more flexibility than 6×19 IWRC slings. ***7×7×7 galvanized cable laid*** slings are the most flexible of all mechanical-splice slings. They grip tighter and are easier to handle, but are less resistant to cuts and abrasion.

To Order: Sold in the minimum length shown as well as 6, 8, 10, and 12 ft., or any length you choose up to a maximum of 20 ft. Please specify length.

Also Available: 6×19 IWRC (Style 1) slings in stainless steel. Please ask for 3550T999 and specify stainless steel, rope diameter, and sling length.

1/2″	2,800	—	—	2	**8942T93**	58.47	3.76

★ Diameter listed is the overall sling diameter (all three wires together). Meets ANSI B30.9.
♣ Constructed of 7×19 galvanized steel strand core wire rope.

3

4

Hand-Splice Slings

Loops are formed by hand and the ends are tucked back into the sling's body for a tapered and concealed splice. All are made from a single wire rope so they are more flexible, but less crush resistant than other constructions. Maximum temperature is 180°F.

To Order: Sold in the minimum length shown as well as 6, 8, 10, and 12 ft., or any length you choose up to a maximum of 20 ft. Please specify length.

Warning! **Never exceed work load limits. Never use to lift people or items over people.**

About Slings with Fittings

Our wide selection of sling materials and fittings allows you to design a sling to suit your application—simply choose a sling material and specify your desired length and combination of end fittings. All our slings, except Grade 50 stainless steel, meet OSHA 1910.184 and ANSI B30.9.

Slings with fittings are also known as bridle slings. ***Single-leg*** slings are designed for straight, vertical lifting applications. You must choose a top and bottom fitting. ***Two-leg*** slings provide more stability and control than single-leg slings. All come with a top link and your choice of a set of end fittings. ***Three-*** and ***four-leg*** slings give multicorner support to heavy, odd-shaped loads. Both types come with a top link and your choice of a set of end fittings.

Chain Slings— Have a long life and are ideal for lifting in rugged applications where heat and abrasion resistance are required. Each sling includes a test certificate. All have a steel tag that shows chain grade and size, length, configuration, and work load limits. Sling fittings are made of the same material as the chain. Links and hooks are either mechanically connected to the chain or welded for increased tamper resistance.

Grade 80 alloy steel chain resists wear and is heat-treated for high strength. Maximum temperature for rated work load limit is 400° F.

Grade 100 alloy steel chain has superior strength and is heat-treated for high strength. Maximum temperature for rated work load limit is 400° F.

Grade 120 alloy steel chain has strength and wear resistance superior to all other alloy steel chains. It has a blue powder-coated finish for easy identification and corrosion resistance. Maximum temperature for rated work load limit is 400° F.

Grade 50 Type 316L stainless steel chain resists rust, saltwater, and acidic solutions. Maximum temperature for rated work load limit is 750° F.

Web Slings— Are lightweight and nonconductive. They're made of two-ply web and have forged alloy steel fittings. Web on single-leg slings is 1/8″ thick; web on multi-leg slings is 1/4″ thick. A sewn-on tag shows material, length, and work load limits. Maximum temperature is 194° F.

Wire Rope Slings— Provide better abrasion and temperature resistance than web slings. The ends of the slings are mechanically spliced and secured with a pressed metal sleeve. All are tagged with work load limits. Maximum temperature is 400° F.

Fittings— Top and bottom ends are shown below. *Sling hooks* include latches. *Locking hooks* have a locking latch that can't be opened under load. *Grab* and *foundry hooks* don't have latches. *Shackles* have a screw style pin.

To Determine Price— Suppose you want a two-leg, 6-ft., 9/32″, Grade 80 alloy steel chain sling with sling hook end fittings (see 3406T24 on page 1489). To determine the cost, you would first take the base price for the 2 ft. chain with top link ($94.92) and add the price for an additional 4 ft. of chain (4 × $7.02). Then, add the price for a set of sling hook end fittings ($68.70). Your total cost would be $191.70.

Note: Work load limits apply to balanced loads lifted at defined load angles (see pictures below).

ⓘ For additional information about slings with fittings, including end fitting dimensions, go to mcmaster.com and search for **8864TAC**.

Single-Leg Chain and Nylon Web Slings with Fittings

Chain Sling with Sling Hook and Grab Hook

Nylon Web Sling with Oblong Link and Locking Hook

To Order: Slings are sold in standard lengths of 3, 6, 8, and 10 ft., or any length you choose up to a maximum of 20 ft. Please specify length, top fitting, and bottom fitting. To determine your total cost add the base price, plus the price for each additional foot of length, plus the price of the top fitting, and the price of the bottom fitting.

Warning! **Never exceed work load limits. Never use to lift people or items over people.**

For information about slings with fittings, see page 1488.

For additional information about slings with fittings, including end fitting dimensions, go to mcmaster.com and search for **8864TAC**.

Multi-Leg Nylon Web Slings with Fittings

Two Legs with Sling Hooks

Furnished with a top oblong link.

To Order: Slings are sold in standard lengths of 3, 6, 8, and 10 ft., or any length you choose up to a maximum of 20 ft. Please specify length plus the bottom end fittings. To determine your total cost, add the base price, plus the price for each additional foot of length, and the price for a set of end fittings.

Multi-Leg Steel Wire Rope Slings with Fittings

Two Legs with Sling Hooks

Furnished with a top pear link and 6×19 IWRC wire rope. A compression sleeve secures the splice on the rope ends.

To Order: Slings are sold in the minimum lengths shown as well as 3, 6, 8, and 10 ft., or any length you choose up to a maximum of 20 ft. Please specify length plus the bottom end fittings. To determine your total cost, add the base price, plus the price for each additional foot of length, and the price for a set of end fittings.

Grade 100 Alloy Steel Adjustable Chain Slings with Fittings

Single *Basket* *Double*

Using a specially designed top link, you can quickly and easily adjust these slings into all three configurations shown. The top link has a yellow powder-coated finish and is marked with the work load limits. End fittings are sling hooks with latches. *Note:* Not recommended for use at angles less than 45°. See page 1488 for illustration.

Sure-Grip Cylinder Slings

With their secure grip, these nylon choker slings safely lift, carry, and suspend compressed gas cylinders. Slings have molded urethane gripping pads that provide traction and flexibility without slipping or damaging the surface of the cylinder. Maximum temperature is 150° F. Meet OSHA CFR 1910.101 for proper handling of gas cylinders.

Lg. × Wd.	Fits Cylinder Dia.	Work Load Limit, lbs.		
52″ × 2″	4″-12″	400	4306T12	$184.66
70″ × 2″	4″-15″	400	4306T11	184.66

Quick-Adjust Grade 100 Alloy Steel Adjustable Chain Slings with Fittings

Single Leg

Use the grab hook to quickly adjust the chain to the length you need. The top link, chain, and the end fitting of these slings come already assembled for use. All slings have an attached chain wear gauge and a tag that shows the type, length, and work load limit.

Chain has a black finish; the oblong top link, sling hook with latch, and grab hook are painted blue.

Single leg work load limit is for vertical (90°) lifting. ***Two leg*** work load limit is for 60° lifting.

Chain Size	Work Load Limit, lbs.	8-ft. Length		16-ft. Length	
Single Leg					
9/32″	4,300	8370T41	$115.52	8370T43	$153.78
3/8″	8,800	8370T42	156.23	8370T44	199.42
Two Leg

3/8″	15,200	8370T46	280.40	8370T48	409.42

Blanket Slings

Lift dirt, rocks, and other odd-shaped objects. Slings have a 14″ lifting eye at each corner. When not in use, slings fold up for easy storage. Made of heavy duty 22-oz., UV-resistant polyvinyl with reinforcing nylon straps. Color is red.

Size	Cap., lbs.		
6′ × 6′	700	3649T21	$384.60
7′ × 7′	1,100	3649T22	633.84
8′ × 8′	1,400	3649T23	888.56

Warning! ***Never exceed work load limits. Never use to lift people or items over people.***

About Hoist Rings

Hoist rings pivot and swivel to compensate for pitch, roll, and sway when lifting heavy or unbalanced loads. A hoist ring's ability to pivot 180° and swivel 360° from a center point provides resistance to stresses that would bend or break an eyebolt. Hoist rings are recommended for applications requiring angular lifts.

Safety Note: Install the hoist ring base flush to the mounting surface and tighten to the recommended torque shown on the ring. Some loosening may develop after prolonged service. Tighten the mounting bolt periodically to maintain specified torque. For torque wrenches, please see pages 2811-2814.

Forged and Machined Alloy Steel Hoist Rings

Designed with the lifting ring centered over the base, these hoist rings provide the full rated capacity regardless of the lift angle. They are an excellent choice for vertical and angular lifting applications. All hoist rings are made of alloy steel.

Forged hoist rings have a simple design and are an economical alternative to machined hoist rings. A corrosion-resistant coating minimizes rust. The lifting ring is held in place with built-in pins secured inside the hoist ring base.

Machined hoist rings are also known as safety-engineered hoist rings. They are precision-machined to protect slings and hooks from damage and excess wear during lifting. A black-oxide finish offers some corrosion resistance. The lifting ring is held in place by pins that are secured to the hoist ring base.

Also Available: Replacement mounting bolts. Please ask for 3052T888 and specify the McMaster-Carr hoist ring part number.

Warning! Never exceed load limits.

Corrosion-Resistant Hoist Rings

Superior corrosion resistance—that's what these hoist rings are all about. Designed with the lifting ring centered over the base, these hoist rings provide the full rated capacity regardless of the lift angle. They are an excellent choice for vertical and angular lifting applications.

Nickel-coated alloy steel hoist rings offer corrosion resistance and higher work load limits than Type 316 stainless steel.

Type 316 stainless steel hoist rings are the most corrosion resistant hoist rings we offer.

Also Available: Replacement mounting bolts. Please ask for 2949T777 and specify McMaster-Carr hoist ring part number.

Wide-Base Hoist Rings

A wide, round base distributes the load and adds stability. The lifting ring is centered over the base so these hoist rings provide the full rated capacity regardless of the lift angle. They are an excellent choice for vertical and angular lifting applications. All hoist rings are made of alloy steel and are precision-machined to protect slings and hooks from damage and excess wear during lifting. A black-oxide finish offers some corrosion resistance.

Large-Opening Hoist Rings

The lifting ring has a wide, round opening that accepts large hooks and a slim profile that makes connecting easier. A hex head on the bolt makes tightening simple. These hoist rings are an excellent choice for vertical and angular lifting applications and provide the full rated capacity regardless of the lift angle.

Type 630 stainless steel hoist rings offer corrosion resistance.

Side-Mount Hoist Rings

Look no further if you need a lifting point to the side. The lifting ring is mounted offset from the center. All are made of alloy steel.

D-ring hoist rings are the economical choice for side-mount applications. They can also be top mounted.

Round-ring hoist rings have a large opening to accommodate a variety of hook sizes and styles.

Also Available: Repl. bolts. Please ask for 29525T888 and specify McMaster-Carr hoist ring part number.

Easy-Swivel Ball Bearing Hoist Rings

A ball bearing swivel with a machined bearing surface evenly distributes the load and provides smooth swiveling under load. All are made of Grade 80 steel. The lifting ring is oval shaped and has a red powder-coated finish. The base is hex shaped and secures with a wrench.

Also Available: Hoist rings with M12, M16, M20, M24, and M30 threads. Please ask for 2932T889 and specify metric thread size.

Thread Size	Work Load Limit, lbs.	(A)	(B)	(C)	(D)	(E)

Quick-Release Hoist Rings

Ideal for items that are frequently moved—thread the insert into a tapped hole and push the lock/release button for insertion and removal. The button is recessed in the base of the lifting ring to prevent accidental release. The lifting ring is round and has a large opening and a slim profile for easy attachment of hooks. All are corrosion-resistant Type 630 stainless steel.

Extra inserts let you use one hoist ring on multiple items.

Warning! Never exceed work load limits.

For information about hoist rings, see page 1491.

Turn-and-Lock Hoist Rings

Swivel these hoist rings to the desired position then lock them in place for lifting. Hand tighten the set screw to lock the base for lifting; loosen it to swivel. The lifting ring is shackle-style and pivots for angular lifting. All are made of alloy steel.

Also Available: Replacement bolts. Please ask for 3026T888 and specify the McMaster-Carr hoist ring part number.

Fixed-Base High-Capacity Hoist Rings

Top View Two Mounting Holes

Top View Four Mounting Holes

Unlike other hoist rings, these have a fixed base for applications where swiveling is not required. They also offer small thread sizes with high work load limits and can be permanently installed. The lifting ring pivots for angular lifts. All are forged alloy steel and have a black-oxide finish for some corrosion resistance. Mounting bolts are included.

Forged Eye Nuts

Heavy Duty Oval Eye

Round Eye

Oval Eye

Add eye nuts to an existing stud or bolt to create a lifting eye.

Note: Work load limits shown are based on a vertical lift and apply to the eye nuts only. The stud or bolt you use will influence the ultimate work load limit.

Steel eye nuts are forged and offer up to double the work load limit of galvanized steel. ***Zinc-plated steel*** eye nuts are forged and provide good corrosion resistance in most environments. ***Galvanized steel*** eye nuts are forged and have a hot-dipped finish for better corrosion resistance than zinc-plated steel. ***Type 304 stainless steel*** eye nuts are forged and have excellent corrosion resistance. ***Type 316 stainless steel*** eye nuts are forged, nonmagnetic, and offer better corrosion resistance than Type 304 stainless steel.

About Lifting with Eyebolts

Eyebolt with Shoulder

Eyebolt without Shoulder

Eyebolts with shoulder can be used for vertical lifts as well as angular lifts up to 45°. However, angular lifts significantly reduce the work load. For example, lifting at 45° reduces the work load limit by 75%. For angular lifts, we recommend using hoist rings, sold on pages 1491-1494.

Eyebolts without shoulder are for vertical lifts only.

The work load limit for all eyebolts is based on a straight vertical lift. *Note:* Any eyebolt that has been modified from its original design will have a reduced work load limit and should be discarded.

Steel Eyebolts—For Lifting

Also known as machinery eyebolts. All are made of forged carbon steel.

Steel eyebolts are good for general purpose applications where corrosion is not a factor. For hex nuts, see pages 3186-3192.

Zinc-plated steel eyebolts have good corrosion resistance in most environments. For hex nuts, see pages 3186-3192.

Galvanized steel eyebolts are hot dipped and offer better corrosion resistance than zinc-plated steel.

Also Available: Hex nuts for galvanized steel eyebolts. Please ask for 3013T777 and specify thread size.

● Work load limit is 2,400 lbs.

Warning! **Never exceed work load limits.**

Large Thread Size Steel Eyebolts—For Lifting

Big lifts are no problem for these eyebolts. Also known as machinery eyebolts. All are made of forged carbon steel.

Steel eyebolts are good for general purpose applications where corrosion is not a factor. For hex nuts, see pages 3186-3192.

Zinc-plated steel eyebolts have good corrosion resistance in most environments. For hex nuts, see pages 3186-3192.

Galvanized steel eyebolts are hot dipped and offer better corrosion resistance than zinc-plated steel.

Also Available: Hex nuts for galvanized steel eyebolts. Please ask for 3013T777 and specify thread size.

Black-Oxide Steel Eyebolts—For Lifting

The black-oxide finish blends into the background in applications where concealment is important. It also offers some corrosion resistance. For hex nuts, see pages 3186-3192.

High-Strength Alloy Steel Eyebolts—For Lifting

The highest strength eyebolts we offer. Plus these eyebolts are the best choice for low-temperature applications. They will retain their strength in temperatures as low as –40° F. Made of 8620 alloy steel. Meet ASTM F541. For hex nuts, see pages 3186-3192.

Stainless Steel Eyebolts—For Lifting

The most corrosion-resistant eyebolts we offer. For hex nuts, see pages 3186-3192.

Type 304 stainless steel eyebolts offer excellent corrosion resistance.

Type 316 stainless steel eyebolts are nonmagnetic and provide superior corrosion resistance.

Warning! Never exceed work load limits.

For information about lifting with eyebolts, see page 1495.

Metric Steel Eyebolts with Shoulder—*For Lifting*

Also known as machinery eyebolts. All are made of forged steel. For hex nuts, see pages 3192-3194.

Steel eyebolts are good for general purpose applications where corrosion is not a factor.

Zinc-plated steel eyebolts offer good corrosion resistance in most environments. Meet DIN 580.

Galvanized steel eyebolts have a hot-dipped finish and offer better corrosion resistance than zinc-plated steel eyebolts.

Type 304 stainless steel eyebolts provide excellent corrosion resistance. Meet DIN 580.

Type 316 stainless steel eyebolts are nonmagnetic and have better corrosion resistance than Type 304 stainless steel. Meet DIN 580.

Swivel Eyebolts and Eye Nuts—*For Lifting*

Unlike conventional eyebolts and eye nuts that are in a fixed position when installed, these bolt down and swivel 360° to adjust the direction of the load. They can be used for vertical, 45°, and 90° lifts. All are made of forged alloy steel.

Eyebolts include a removable key for tightening the bolt. For hex nuts, see pages 3186-3194.

For information about lifting with eyebolts, see page 1495.

Steel Eyebolts with Nuts—For Lifting

Also known as nut eyebolts, these eyebolts have a partially threaded shank and include a hex nut.

Galvanized steel eyebolts are hot dipped and offer corrosion resistance.

Type 304 stainless steel eyebolts offer excellent corrosion resistance. For hex nuts, see pages 3186-3192.

Type 316 stainless steel eyebolts are nonmagnetic and provide superior corrosion resistance. For hex nuts, see pages 3186-3192.

Also Available: Additional hex nuts for galvanized steel eyebolts. Please ask for 3016T888 and specify thread size.

Fiberglass Eyebolts—Not for Lifting

Fiberglass-filled polyurethane construction gives you excellent corrosion and chemical resistance. Temperature range is −40° to +300° F. Color is off-white. For fiberglass square nuts, see 91332A on page 3195.

Thread Size	(A)	(B)	With Shoulder		Without Shoulder

Thimble Eyebolts—Not for Lifting

A large-radius eye reduces kinks and minimizes wear of your wire rope. All eyebolts are made of forged galvanized steel, have a partially threaded shank, and include a square nut.

Thread Size	(A)	(B)	(C)		
Straight Thimble Eye					
5/8″-11	9/16″	10″	4″	3081T41	$12.83

3/4″-10	11/16″	12″	6″	3081T54	26.58

Warning! Never exceed work load limits.

Unthreaded Forged Steel Eyebolts—Not for Lifting

Also known as blank eyebolts, you can weld or thread these as needed to suit your application.

Steel eyebolts are good for general purpose applications where corrosion is not a factor.

Type 316 stainless steel eyebolts are nonmagnetic and provide corrosion resistance.

Nylon Eyebolts with Nuts—Not for Lifting

A smooth eye means no more snagging your wire and cable. All are made of lightweight, nonconductive, corrosion-resistant nylon. Color is white. Temperature range is –112° to +185° F. A hex nut is included. For additional hex nuts, see pages 3186-3192.

Light Duty Eyebolts with Nuts—Not for Lifting

Make wire-guide and tie-down applications easier with these partially threaded bent-wire eyebolts. A hex nut is included. For additional hex nuts, see pages 3186-3192.

Zinc-plated steel eyebolts offer good corrosion resistance in most environments. ***Black-oxide steel*** eyebolts have better corrosion resistance than zinc-plated steel. ***Type 304 stainless steel*** eyebolts provide excellent corrosion resistance.

Warning! ***Never use for lifting.***

Light Duty Welded Eyebolts with Nuts—Not for Lifting

A bent-wire welded eye design keeps wire and cable from slipping out. Hex nut is included.
Type 316 stainless steel are nonmagnetic and more corrosion resistant than zinc-plated steel. Two washers are included.

Removable Ringbolts—Not for Lifting

Once in place, the mounting bolt stays in place but lets you remove the ring when not in use. Made of zinc-plated steel.

To install, drill a hole in your panel, insert the mounting bolt, and secure it with the included hardware. Screw the ring into the internal threads of the mounting bolt to create the anchor point. You'll get two rings and two mounting bolts.

Ringbolts—Not for Lifting

Galvanized Steel — *300 Series Stainless Steel*

Hex nut is included.

Galvanized steel ringbolts have a shoulder that provides extra stability.

300 series stainless steel ringbolts offer more corrosion resistance than galvanized steel ringbolts.

Tie-Down Rings

A pivoting ring lets you secure loads in various directions. Mounting screws not included. ***Zinc-plated steel*** rings provide some corrosion resistance. ***300 series stainless steel*** rings offer more corrosion resistance. ***Steel*** ring has square mounting holes that accept carriage bolts. ***High-strength steel*** rings have a red powder coating that provides some corrosion resistance.

Weld-On Tie-Down Rings

Also known as lashing rings, these pivoting rings have a welding plate for permanent attachment.

Steel—Finish is plain, except 3028T31, which has a zinc-plated ring.

High-Strength Steel—Welding plate has a plain finish; ring has a red painted finish.

300 Series Stainless Steel—Rings offer more corrosion resistance than steel rings.

Magnetic Tie-Down Rings

Powerful rare earth magnets attach to ferrous metal surfaces with a turn of the handle. The handle has an eye as well as hooks for a variety of connections. Housing is nickel-plated steel. Handle is steel with a black powder coating. Work load limit is based on direct contact on a flat, smooth, untreated 1/4″ thick surface. Variations in mounting surface conditions will reduce the work load limit.

Work Load Limit, lbs.	(B)	Base Size		
30	3 7/16″	1 9/16″ Dia.	3154T1	$52.38

135	4 3/4″	3″ Lg. × 2″ Wd.	3154T3	197.62

Adhesive-Backed Tie-Down Rings

Create anchor points without drilling or welding. Strong polyethylene rope is sewn to an adhesive-backed foam rubber base. Base flexes to mount on curved surfaces and adheres to glass, metal, or plastic. Adhesive is acrylic. Begins to harden in 20 minutes and reaches full strength in 72 hours. Temperature range is –95° to +165° F.

Work Load Limit, lbs.	Base Wd	Base Lg.		
140	2 1/2″	3 1/8″	8310T13	$11.00

Webbing Guides

Also known as footman's loops, guides are made of zinc-plated steel. They can also be used as anchor points in tie-down applications.

Also Available: 300 series stainless steel webbing guides. Please ask for 8030T888 and specify maximum webbing width and (F).

Adhesive-Mount Webbing Guides

Guide is made of glass-reinforced thermoplastic and has adhesive tabs to hold it in place temporarily during installation (adhesive for mounting is sold separately).

Adhesive is acrylic. Begins to harden in 30 minutes and reaches full strength in 24 hours. Temp. range is –67° to +250° F. This product is compliant under all state VOC rules in effect on April 1, 2011.

Cargo-Securing Track, Straps, and Accessories

Start with track and add the straps and accessories you need to keep your cargo from shifting inside vans, trucks, and trailers.

Track

Also known as E-track, this track has connection slots for a variety of cargo securement and organizing options. Track has 1/4″ dia. mounting holes (mounting fasteners not included).

Powder-coated steel is gray. *Galvanized steel* is more corrosion resistant.

Horizontal Track

Vertical Track

Lg.	Wd.	Powder-Coated Steel		Galvanized Steel	
Horizontal Track					
5 ft.	5″	88525T11	$16.38	88525T8	$18.76

10 ft.	3 7/16″	88525T51	27.38	—	—

Plates

Plates are a smaller version of the track. ***Single-slot plates*** have 5/16″ dia. mounting holes (mounting fasteners not included). ***Double-slot plate*** includes fasteners for mounting.

Zinc-plated steel and *black-finish steel* are corrosion resistant. *Type 201 stainless steel* provides more corrosion resistance.

Straps

With Track Fittings on Both Ends and Ratchet-Tight Buckle

Quick-Tight Buckle

Latch Hook and D-Ring on One End

D-Ring and Wire Hook on One End

Also known as logistic straps. All buckles, fittings, and hooks are made of zinc-plated steel. Track fittings snap into slots on the track.

Ratchet-tight buckles let you apply maximum tension on the strap, but take longer to tighten.

Torque-limiting ratchet-tight buckles prevent damage caused by overtightening. You set the amount of tension applied.

Quick-tight buckles, also known as cam buckles, tighten the fastest. Pull the strap through; push the spring-loaded cam down to release.

Accessories

Accessories have fittings that snap or lock into the track and are made of zinc-plated steel.

Track fitting with slot has a slot for 2″ wide webbing (see page 1509).

Track fitting with D-ring has a 6″ Lg.×2″ Wd. polyester webbing strap with a D-ring sewn on the end.

Coupling connects two track fittings so you can change the end fitting on your strap or connect two straps together.

Adjustable aluminum beams provide lightweight decking and bracing. Beams have a zinc-plated steel track fitting on each end. Work load limit is based on an evenly distributed load.

Wood beam bracket allows you to mount a 2×4 to the track for economical bracing.

Storage bag has a track fitting on each end. Made of vinyl.

Cargo net has a track fitting and tightening buckle in each corner. Made of nylon mesh. Includes a vinyl storage bag.

Cargo Nets

Elastic Polyurethane Cord

Elastic Polypropylene Mesh

Polypropylene Mesh

Low-Stretch Polyester Mesh

Secure and contain material in vans and trailers.

Elastic polyurethane cord nets are weather and chemical resistant. Cords are strung together on a central ring and have a plastic 1 1/2″ ID mounting hook on each end. **To Order:** Please specify black, red, or yellow.

Elastic polypropylene mesh nets include plastic 1″ ID mounting hooks. Net color varies.

Polypropylene mesh nets are woven and framed with elastic cord. Nets have a loop in each corner and include plastic adhesive-backed mounting knobs. For a more secure hold, use the included fasteners to mount the knobs. Opening size is 1″×1 1/4″. Color is black. 44115T3 folds in half to create a basket for holding your cargo; each mounting knob securely holds two loops.

Low-stretch polyester mesh nets are stronger than polypropylene and polyurethane nets. They are made of quick-drying black polyester webbing. Opening size is 7″×6 3/8″. Nets have loops for anchoring every 11 1/4″.

Cargo Bars

Bar Shown with Two Optional Hoops

Place bars against trailer or truck bed walls to brace your loads. All have pivoting rubber pads at each end for slip resistance. Lengths under 80″ are for use in trucks and vans. Lengths over 80″ can be used in full-sized trailers. Steel provides high strength. Aluminum is lightweight yet strong.

(1) Lever Lock— Lift the lever and pull the bar to extend length, then press down to lock. Lift lever again to release.

(2-4) Ratchet— Have a ratchet handle with a spring-loaded release. Press the spring-loaded release to manually adjust the length, then ratchet the handle to tighten the bar.

(3) Folding ratchet style folds at a center hinge for storage.

(4) Heavy duty ratchet style is more durable than other ratchet-style bars.

(5) Pump Tight— Push the spring-loaded button to adjust the length in 3″ increments, then pump the handle to further tighten the bar. Internal hydraulics prevent the bar from overtightening. Has a separate push-button release.

Optional hoops provide added protection against cargo shifting. Two hoops are provided, unless noted. Hoops are made of aluminum, except 3182T11 and 3182T19, which are galvanized steel.

♦ Set includes one hoop.

Warning! Never exceed work load limits. Never use for lifting applications.

Ratchet Load Binders

Also known as ratchet jacks, these steel load binders have a reversible ratchet that lets you incrementally tension or release your load without kickbacks.

With Grab Hooks— Bind loads on heavy equipment in transit and during construction activities. Meet D.O.T. (Department of Transportation) 393.102 specifications and CVSA (Commercial Vehicle Safety Alliance) requirements.

With Clevis Ends— Push apart or pull together walls, structural members, steel plates, and more. Pin diameter is 1″.

With Eyes— Tighten down loads in heavy duty applications such as connecting barges and constructing bridges.

▲Pulling/pushing.

Lever Load Binders

Pull the lever on these binders to take up the slack in the chain. Made of steel.

With J-Hooks— Has one rigid and one swivel hook.

With Grab Hooks— Have two swivel hooks. Meet D.O.T. (Department of Transportation) 393.102 specifications and CVSA (Commercial Vehicle Safety Alliance) requirements.

Easy Release with Grab Hooks— The body pivots as you release tension on the chain, preventing kickback. Has two swivel hooks. Meets D.O.T. 393.102 specifications and CVSA requirements.

●Work load limit is 5,400 lbs. when used with 3/8″ Grade 40/43 chain.

Tow Straps

Standard Straps

Lighter and easier to handle than chain, these straps absorb shock and will not scratch or damage the contact surface. ***Straps with eyes*** are silver polyester webbing with a reinforced eye at each end. ***Straps with hooks*** are made of orange nylon webbing and have a steel hook at each end.

To Order: Please specify length: 15, 20, 25, or 30 ft.

Webbing Width	Work Load Limit, lbs.	(A)	15-ft. Length	Each	Extra Length Per Ft.
With Eyes

Tie-Down Winches and Straps

Winches

Weld On

Bolt On

Weld On/Bolt On

Easy-Ratchet Cap

Tensioning Bar

Tensioning Bar with Ratchet End

Pair these winches with a strap (sold separately) to secure loads for transit. Designed for right-hand operation. Meet D.O.T. (Department of Transportation), California Highway Patrol, and North American Cargo Securement Standard requirements. Winches and accessories are made of steel.

Weld-on and ***bolt-on*** winches require a tensioning bar (sold separately). Winches have a black finish. *Bolt-on* winches have two mounting bolts.

Weld-on/bolt-on winch tensions with a 1⅛″ hex wrench (see 5163A86 on page 2773). Weld or bolt in place. Winch has two ½″ dia. mounting holes (fasteners not included). It has a spring-loaded release. Frame has a black finish; all other components have a zinc-plated finish.

Easy-ratchet cap slips onto the winch to allow continuous tensioning without removing the tensioning bar. ***Tensioning bar with ratchet end*** has a built-in ratchet so you can quickly tighten the winch. The other end can attach to lever load binder handles for safe opening and closing.

Straps

Flat Hook

Delta Ring

Loop Eye

Thread one end of the strap through a winch (sold separately); the ratcheting of the winch tensions the strap. Straps have a flat hook, delta ring, or loop eye on the other end. *Flat hook* and *delta ring* are zinc-plated steel, except flat hooks on low-stretch polyester webbing, which have a black finish.

Low-stretch polyester webbing is quick drying. Color is yellow.

Abrasion-resistant polyester webbing is yellow with black cut-resistant edges.

Ultra abrasion-resistant polyester webbing is impregnated with PVC for the most abrasion resistance and UV protection. Color is orange.

● Work load limit is 5,000 lbs.

Heavy Duty Ratchet Tie-Down Straps

Flat Hook

Wire Hook

Latch Hook

Tough jobs are no problem—these straps have high-strength webbing, buckles, and hooks to handle demanding applications. Meet D.O.T. (Department of Transportation), CVSA (Commercial Vehicle Safety Alliance), and California Highway Patrol regulations. Straps have ratchet-tight buckles for maximum tension. *Zinc-plated steel* offers some corrosion resistance. *300 series stainless steel* provides more corrosion resistance.

Low-stretch polyester webbing is quick drying. Color is yellow.

Abrasion-resistant polyester webbing is yellow with black cut-resistant edges.

Ultra abrasion-resistant polyester webbing is impregnated with PVC for the most abrasion resistance and UV protection. Color is orange.

Heavy Duty Ratchet Tie-Down Straps with Webbing Spool

Excess webbing spools onto the ratchet-tight buckle of these straps to keep it neatly out of your way during use. The buckle and fittings are made of zinc-plated steel; the webbing is yellow polyester. Max. length is 27 ft.

Hook Type	Webbing Wd.	Work Load Limit, lbs.	(A)		
Flat Hooks	2″	3,330	5/8″	29665T57	$39.28
Wire Hooks	2″	3,330	3/4″	29665T56	37.06

Ratchet Tie-Down Straps

Ratchet-tight buckles let you apply maximum tension to the straps.

Straps with Hooks

Straps come with your choice of webbing material: ultra-abrasion-resistant nylon or low-stretch polyester.

Straps with Zinc-Plated Steel Hooks—1″ wide nylon webbing is black; 2″ wide nylon webbing is gray. 1″ wide polyester webbing is white; 2″ wide polyester webbing is brown.

Straps with Stainless Steel Hooks—Have what it takes to stand up to corrosive environments. The buckle is also stainless steel. Nylon webbing is black; polyester webbing is blue.

To Order: Please specify nylon or polyester webbing as well as length: 3, 4, 6, 8, 10, 12, 16, or 20 ft.

Combination-End Ratchet Tie-Down Straps

Each end of these straps has a wire hook along with a movable D-ring—use them together to create a soft loop in a choker configuration, or separately in a variety of applications. All have a ratchet-tight buckle to apply maximum tension on the strap. The buckle and fittings are zinc-plated steel. The webbing is blue polyester.

To Order: Please specify length: 3, 4, 6, 8, 10, 12, 16, or 20 ft.

Webbing Wd.	Work Load Limit, lbs.	(A)	3-ft. Length	Each	Extra Length Per Ft.
1″	835	3/8″	9575T51	$22.45	$0.20
2″	1,670	7/8″	9575T52	24.98	.52

Retractable Ratchet Tie-Down Straps

A lever handle with spring release provides quick and easy dispensing and retracting of the webbing, while a ratchet allows you to apply just the right amount of tension for your application.

Straps with S-Hooks on Both Ends

Ratchets and hooks are black plastic-coated steel. Webbing is black nylon, except 9116T12 is polyester.

Webbing Wd.	Max. Lg.	Work Load Limit, lbs.	(A)		
1″	6 ft.	500	1″	9116T61	$17.23

1/2″	15 ft.	500	1 9/16″	29925T26	31.98

■ Rope is braided polyester.

Create-Your-Own Tie-Down Ropes

Add one of these ratchets to rope sold separately on pg. 1412 to make your own tie down. Ratchets include a hook for the end of the rope.

For Rope Dia.	(A)		
1/4″	1 1/8″	29925T51	$6.86
3/8″	1 1/4″	29925T52	10.86

Retractable Seatbelt-Style Tie-Down Straps

Securing your load can be as simple as using a seatbelt. Permanently mount the spring-retracting strap on one side and the buckle on the other—they both have a 3/8″ dia. mounting hole (fasteners not included). The housing is black plastic, the webbing is black polyester, and the end fitting and buckle are zinc-plated steel.

2″	4′11″	3285T72	21.66

Shock-Absorbing Tie-Down Straps

A unique shock-absorbing rubber bar on these tie-down straps stretches for proper tension on the strap and contracts if your load shifts. The design also reduces damage to loads caused by overtightening. Straps have a zinc-plated steel quick-tight buckle, which is also known as a cam buckle; lift the cam, pull the webbing through, then release the cam to hold. Webbing is black nylon. Hooks are plastic-coated steel.

Pull-Tight Tie-Down Straps

Strap with Quick-Tight Buckle

Try these pull-tight straps in low-tension applications for faster tightening than ratchet-style straps. All straps have a zinc-plated steel quick-tight buckle, unless otherwise indicated. Quick-tight buckles are also known as cam buckles; lift the cam, pull the webbing through, then release the cam to hold.

Straps with Hooks

Flat Hook *Wire Hook* *S-Hook* *Latch Hook*

Straps have a zinc-plated steel hook on each end. Comes in your choice of webbing material: ultra-abrasion-resistant gray nylon or low-stretch brown polyester. **To Order:** Please specify webbing material, as well as length: 3, 4, 6, 8, 10, 12, 16, or 20 ft.
